Differential Input

Single-ended Input

Single-ended & Differential Input
The A82X series provides 16-channel single-ended or 8-channel differential analog input. Single-ended inputs are all referenced to a common ground point. They are typically used when the input signal are greater than 1 volt, the lead wires from the signal source to the analog input hardware are short (less than 5 meter), and all input signals share a common ground reference. If above criteria do not meet, you should use differential inputs.
The common-mode noise can be canceled, when the input is configured in differential mode.
