

7.2. I/O Expansion Boards for 7188/7186 Series

• Overview

X-Board is a small I/O expansion board inserted in μ PAC (μ PAC-7186 Series & I-7188 series) for expanding I/O functions. Most μ PACs (except some modules like I-7188 & I-7188D) support one I/O expansion bus. Each bus can be plugged in one X-Board. The X-Board allows users to implement various I/O functions such as DI, DO, A/D, D/A, Timer/Counter, UART, flash memory, battery backup SRAM, AsicKey & other I/O functions.

Users may choose our functioned X-Boards (model number X1xx ~ X7xx) or design their own I/O expansion boards (module number X0xx). We have designed several X-Boards for expanding the μ PAC's features. If users choose a small size X-Board, then they can mount this I/O expansion board directly onto the μ PAC. Customized I/O Expansion Boards can be ordered through ODM project.
