REGULATORY COMPLIANCE STATEMENT

Product(s) associated with this publication complies/comply with all applicable regulations. Please refer to the Technical Specifications section for more details.

WARRANTY

ORing warrants that all ORing products are free from defects in material and workmanship for a specified warranty period from the invoice date (5 years for most products). ORing will repair or replace products found by ORing to be defective within this warranty period, with shipment expenses apportioned by ORing and the distributor. This warranty does not cover product modifications or repairs done by persons other than ORing-approved personnel, and this warranty does not apply to ORing products that are misused, abused, improperly installed, or damaged by accidents.

Please refer to the Technical Specifications section for the actual warranty period(s) of the product(s) associated with this publication.

DISCLAIMER

Information in this publication is intended to be accurate. ORing shall not be responsible for its use or infringements on third-parties as a result of its use. There may occasionally be unintentional errors on this publication. ORing reserves the right to revise the contents of this publication without notice.

Getting to Know Your Switch

1.1 About the RGS-7244GP(-E) Industrial Switch

RGS-7244GP series are the managed redundant ring Ethernet switches with 24x10/100/1000Base-(TX) ports and 4x1000Base-X SFP ports. With complete support of Ethernet Redundancy protocol, **O-Ring** (Gigabit model recovery time < 20ms over 250 units of connection) and MSTP/RSTP/STP (IEEE 802.1s/w/D) can protect your mission-critical applications from network interruptions or temporary malfunctions with its fast recovery technology.

ORing's Thunder Series Ethernet switches provide advanced IP-based bandwidth management which can limit the maximum bandwidth for each IP device. User can configure IP camera and NVR with more bandwidth and limit other device bandwidth.

ORing's Thunder Series Ethernet switches also support application-based QoS.

Application-based QoS can set highest priority for data stream according to TCP/UDP port number. ORing's special IP police function can permit only allowed IP address with MAC address to access the networking. Hacker cannot access the IP surveillance network without permission. It can avoid hacker from stealing video privacy data and attacking IP camera, NVR and controllers.

Moreover, ORing's Thunder Series Ethernet switches provide advanced DoS/DDoS auto prevention. If there is any IP flow become big in short time, ORing's thunder switch will lock the source IP address for certain time to prevent the attack. It is hardware-based prevention so it can prevent DDOS attack immediately and completely. And all functions of RGS-7244GP can also be managed centralized and convenient by Open-Vision v3.0, except the Web-based interface, Telnet and console (CLI) configuration. Therefore, the switch is one of the most reliable choice for highly-managed and Gigabit Fiber Ethernet application.

1.2 Software Features

- Industry's fastest Redundant Ethernet Ring (Gigabit model recovery time < 20ms over 250 units connection)
- Support Ring Coupling, Dual Homing over Ring and standard STP/RSTP
- Support SNMPv1/v2c/v3 & RMON & Port base/802.1Q VLAN Network Management
- Event notification by Email and SNMP trap
- Windows Utility, Web-based ,Telnet and Console(CLI) configuration
- Enable/disable ports, MAC based port security
- Port based network access control (802.1x)
- VLAN (802.1q) to segregate and secure network traffic
- RADIUS centralized password management
- SNMPv3 encrypted authentication and access security
- Quality of Service (802.1p) for real-time traffic
- VLAN (802.1q) with double tagging and GVRP supported
- IGMP Snooping for multicast filtering
- Port configuration, status, statistics, mirroring, security
- Remote Monitoring (RMON)

1.3 Hardware Features

- One 100~240VAC power input and RGS-7244GP-E added dual 36~72VDC power inputs.
- Operating Temperature : -40 to 70°C
- Storage Temperature : -40 to 85 °C
- Operating Humidity: 5% to 95%, non-condensing
- Casing: IP-20
- Provided 24 x 10/100/1000Base –T(X) RJ-45 ports
- Provided 4 x 1000 Base-X SFP ports
- Console Port (DB9 Female connector)
- Dimensions :

RGS-7244GP: 443.7 (W) x 200 (D) x 44 (H) mm RGS-7244GP-E: 431 (W) x 342 (D) x 44 (H) mm

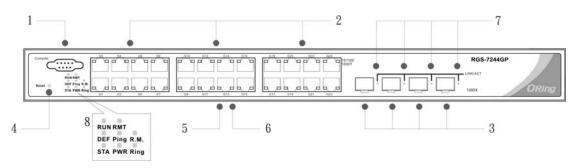

Hardware Overview

2.1 Front Panel

The following table describes the labels that stick on the RGS-7244GP(-E)

Port	Description
Gigabit SFP ports	4 x 1000Base-X on SFP port
Gigabit Ethernet	24 x 10/100/1000Base–T(X)
Port	
Console	Use RS-232 with DB9 connecter to manage switch.

RGS-7244GP

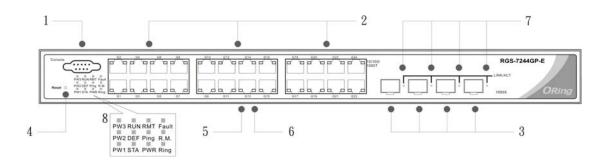

- 1. Console port (DB9 Female connector)
- 2. 10/100/1000Base-T(X) gigabits Ethernet port
- 3. 1000Base-X Fiber port on SFP port
- 4. Reset button. Push the button 3 seconds for reset; 5 seconds for factory default.
- LED for Ethernet ports Link/Act status: Left Green for 1000Mbps indicator, Amber for 10/100Mbps indicator
- 6. LED for Ethernet ports Duplex status.
- 7. LED for SFP ports Link/Act status.
- 8. Front panel LED Status:
- · LED for STA. Green: Indicate that the system is ready. The LED is blinking when the system is upgrading firmware
 - · LED for PWR. The LED lights on when the power module is activated.
 - · LED for R.M (Ring master). When the LED light on, it means that the switch is the ring master of Ring.
 - · LED for Ring. When the led light on, it means the O-Ring is activated.
 - · LED for DEF: System resets to default configuration.

- · LED for Ping: System is processing "PING" request.
- · LED for RUN: System is operating continuously.
- · LED for RMT: System is accessed remotely.

RGS-7244GP-E

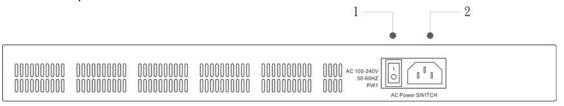

- 1. Console port (DB9 Female connector)
- 2. 10/100/1000Base-T(X) gigabits Ethernet port
- 3. 1000Base-X Fiber port on SFP port
- 4. Reset button: Push the button 3 seconds for reset; 5 seconds for factory default.
- LED for Ethernet ports Link/Act status: Left Green for 1000Mbps indicator, Amber for 10/100Mbps indicator
- 6. LED for Ethernet ports Duplex status.
- 7. LED for SFP ports Link/Act status
- 8. Front Panel LED Status:
 - · LED for PW1: When the PWR1 links, the green led will be light on.
 - · LED for PW2: When the PWR2 links, the green led will be light on.
 - · LED for PW3: When the PWR3 links, the green led will be light on.
 - · LED for STA: Green: Indicates that the system ready. The LED is blinking when the system is upgrading firmware
 - · LED for PWR: This LED lights on when the power module is activated.
 - · LED for R.M. (Ring master): When the LED lights on, this switch is designated as the ring master of the Ring topology.
 - · LED for Ring: When the led light on, the O-Ring is activated.
 - · LED for DEF: System resets to default configuration.
 - · LED for Ping: System is processing "PING" request.
 - · LED for RUN: System is operating continuously.
 - · LED for RMT: System is accessed remotely.
 - · LED for Fault: Indicates unexpected event occurred.

2.2 Rear Panel

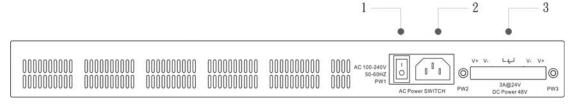

The rear panel of RGS-7244GP is shown as below:

- 1. Power Switch
- 2. Power input for AC 100V~240V / 50~60Hz

The rear panel of RGS-7244GP-E is shown as below:

- 1. Power Switch
- 2. Power input for AC 100V~240V / 50~60Hz
- 3. Dual power inputs for DC

2.3 Rack mount kit assembly

You can find the rack mount kit and the screws in the packing box. Please assembly the rack mount kit on the switch with screws as shown below:

2.4 Front Panel LEDs

LED	Color	Status	Description
PW1	Green	On	When the PWR1 links, the green led will be light on.
PW2	Green	On	When the PWR2 links, the green led will be light on.
PW3	Green	On	When the PWR3 links, the green led will be light on.
STA	Green	On	When the power module is in PWR UP state, the green LED lights on.
		Blinking	When the system is upgrading firmware
DEF	Green	On	System resets to default configuration.
RUN	Green	Slowly blinking	System is operating continuously.
PWR	Green	On	DC power module activated.
Ping	Green	Blinking	When the led light on, System is processing "PING" request
RMT	Green	Blinking	System is accessed remotely.
		On	Ring enabled.
Ring	Green	Slowly blinking	Ring has only One link. (lacks one link to build the ring)
		Fast blinking	Ring work normally.
R.M	Green	On	When the system is operating in O-Ring Master mode
Fault	Amber	On	Indicates unexpected event occurred.
10/100/1000Ba	ase-T(X) Gigabit Etherr	net ports	
	Left Green (two color	On	Port speed 1000M link up
LINK/ACT	LED)	Blinking	Data Transmitted on 1000M
LINVACI	Left Amber (two color	On	Port speed 10/100M link up
	LED)	Blinking	Data Transmitted on 10/100M
Full-Duplex	Right Amber	On	Full-Duplex
. an Euplox	Tagner anibor	Blinking	Half-Duplex
SFP			
LINK/ACT	Green	On	Port link up.
	0.00.1	Blinking	Data transmitted

Cables

3.1 Ethernet Cables

The RGS-7244GP(-E) switches has standard Ethernet ports. According to the link type, the switch use CAT 3, 4, 5,5e UTP cables to connect to any other network device (PCs, servers, switches, routers, or hubs). Please refer to the following table for cable specifications.

Cable Types and Specifications

Cable	Туре	Max. Length	Connector
10BASE-T	Cat. 3, 4, 5 100-ohm	UTP 100 m (328 ft)	RJ-45
100BASE-TX	Cat. 5 100-ohm UTP	UTP 100 m (328 ft)	RJ-45
1000BASE-T	Cat. 5/Cat. 5e 100-ohm UTP	UTP 100 m (328ft)	RJ-45

3.1.1 100BASE-TX/10BASE-T Pin Assignments

With 100BASE-TX/10BASE-T cable, pins 1 and 2 are used for transmitting data, and pins 3 and 6 are used for receiving data.

10/100 Base-T(X) RJ-45 Pin Assignments

Pin Number	Assignment
1	TD+
2	TD-
3	RD+
4	Not used
5	Not used
6	RD-
7	Not used
8	Not used

1000 Base-T RJ-45 Pin Assignments

Pin Number	Assignment
1	BI_DA+
2	BI_DA-
3	BI_DB+
4	BI_DC+
5	BI_DC-
6	BI_DB-
7	BI_DD+
8	BI_DD-

The RGS-7244GP(-E) switches support auto MDI/MDI-X operation. You can use a straight-through cable to connect PC to switch. The following table below shows the 10BASE-T/ 100BASE-TX MDI and MDI-X port pin outs.

10/100 Base-T MDI/MDI-X pins assignment

Pin Number	MDI port	MDI-X port
1	TD+(transmit)	RD+(receive)
2	TD-(transmit)	RD-(receive)
3	RD+(receive)	TD+(transmit)
4	Not used	Not used
5	Not used	Not used
6	RD-(receive)	TD-(transmit)
7	Not used	Not used
8	Not used	Not used

1000 Base-T MDI/MDI-X pins assignment

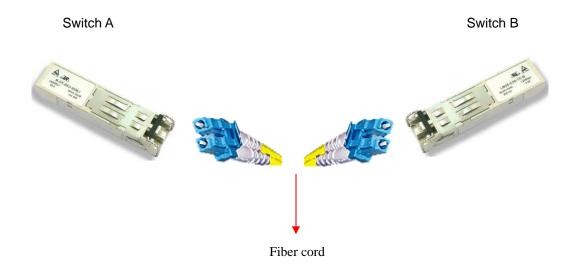

Pin Number	MDI port	MDI-X port
1	BI_DA+	BI_DB+
2	BI_DA-	BI_DB-
3	BI_DB+	BI_DA+
4	BI_DC+	BI_DD+
5	BI_DC-	BI_DD-
6	BI_DB-	BI_DA-
7	BI_DD+	BI_DC+
8	BI_DD-	BI_DC-

Note: "+" and "-" signs represent the polarity of the wires that make up each wire pair.

3.2 SFP

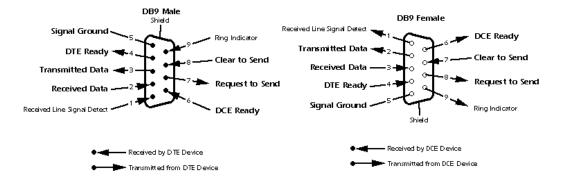

The Switch has fiber optical ports with SFP connectors. The fiber optical ports are in multi-mode (0 to 550M, 850 nm with 50/125 μ m, 62.5/125 μ m fiber) and single-mode with LC connector. Please remember that the TX port of Switch A should be connected to the RX port of Switch B.

3.3 Console Cable

RGS-7244GP(-E) switches can be management by console port. The DB-9 to RJ-45 cable can be found in the package. You can connect them to PC via a RS-232 cable with DB-9 female connector and the other end (RJ-45 connector) connects to console port of switch.

PC pin out (male) assignment	RS-232 with DB9 female connector	DB9 to RJ 45
Pin #2 RD	Pin #2 TD	Pin #2
Pin #3 TD	Pin #3 RD	Pin #3
Pin #5 GD	Pin #5 GD	Pin #5

WEB Management

4.1 Configuration by Web Browser

This section introduces the configuration by Web browser.

4.1.1 About Web-based Management

An embedded HTML web site resides in flash memory on the CPU board. It contains advanced management features and allows you to manage the switch from anywhere on the network through a standard web browser such as Microsoft Internet Explorer.

The Web-Based Management function supports Internet Explorer 5.0 or later. It is based on Java Applets with an aim to reduce network bandwidth consumption, enhance access speed and present an easy viewing screen.

Note: By default, IE5.0 or later version does not allow Java Applets to open sockets. You need to explicitly modify the browser setting in order to enable Java Applets to use network ports.

Preparing for Web Management

The default value is as below:

IP Address: 192.168.10.1

Subnet Mask: 255.255.255.0

Default Gateway: 192.168.10.254

User Name: admin
Password: admin

System Login

- 1. Launch the Internet Explorer.
- 2. Type http:// and the IP address of the switch. Press "Enter".

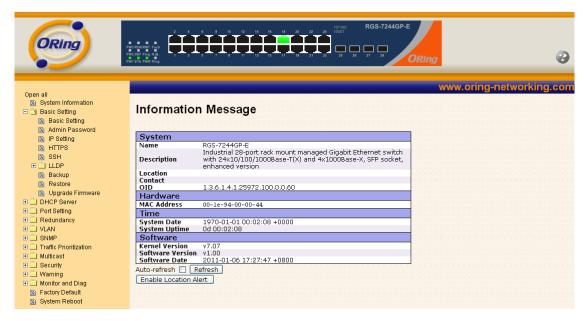

- 3. The login screen appears.
- 4. Key in the username and password. The default username and password is "admin".
- 5. Click "Enter" or "OK" button, then the main interface of the Web-based management appears.

Login screen

Main Interface

Main interface

4.1.2 Basic Setting

4.1.2.1 System Information

The switch system information is provided here.

System Information Configuration		
System Name	RGS-7244GP-E	
System Description Industrial 28-port rack mount manage		
System Location		
System Contact		
System Timezone Offset (minutes) 0		
Save Reset		

System Information interface

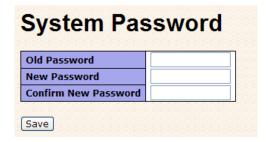

Label	Description
	An administratively assigned name for this managed node. By
	convention, this is the node's fully-qualified domain name – a text
System Name	string (0 to 255 characters) drawn from the alphabet (A-Z, a-z),
System Name	digits (0-9), and the minus sign (-). No space characters are
	permitted as part of a name. The first character must be an
	alphabet, and the first or last character must not be a minus sign.
System	The administratively assigned description for this managed
System	node. The allowed string length is 0 to 255, and the allowed
Description	contents are the ASCII characters from 32 to 126.
System Location	The physical location of this node (e.g., telephone closet, 3rd
	floor). The allowed string length is 0 to 255, and the allowed
	content is the ASCII characters from 32 to 126.
	The textual identification of the contact person for this managed
0.001.000 0.001.001	node, together with information on how to contact this person.
System Contact	The allowed string length is 0 to 255, and the allowed content is
	the ASCII characters from 32 to 126.
Timezone Offset	Enter the name of contact person or organization
	Provide the time zone offset relative to UTC/GMT.
	The offset is given in minutes east of GMT. The valid range is from
	-720 to 720 minutes.

Save	Click to save changes.
Reset	Click to undo any changes made locally and revert to previously saved values.

4.1.2.2 Admin & Password

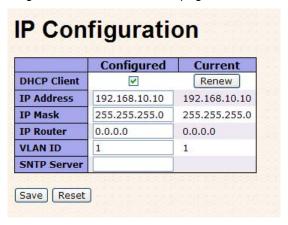

This page allows you to configure the system password required to access the web pages or log in from CLI.

Label	Description
Old Password	Enter the current system password. If this is incorrect, the new
	password will not be set.
New Password	The system password. The allowed string length is 0 to 31, and
	the allowed content is the ASCII characters from 32 to 126.
Confirm password	Re-type the new password.
Save	Click to save changes.

4.1.2.3 IP Setting

Configure the switch-managed IP information on this page.

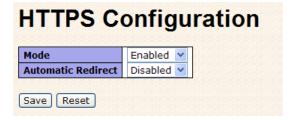

Label	Description
DHCP Client	Enable the DHCP client by checking this box. If DHCP fails and the configured IP address is zero, DHCP will retry. If DHCP fails and the configured IP address is non-zero, DHCP will stop and the configured IP settings will be used. The DHCP client will announce the configured System Name as hostname to provide DNS lookup.
IP Address	Assign the IP address that the network is using. If DHCP client function is enabling, you do not need to assign the IP address. The network DHCP server will assign the IP address for the switch and it will be display in this column. The default IP is 192.168.10.1
IP Mask	Assign the subnet mask of the IP address. If DHCP client function is enabling, you do not need to assign the subnet mask
IP Router	Assign the network gateway for the switch. The default gateway is 192.168.10.254
VLAN ID	Provide the managed VLAN ID. The allowed range is 1 through 4095.
SNTP Server	SNTP is an acronym for Simple Network Time Protocol, a network protocol for synchronizing the clocks of computer systems. SNTP uses UDP (datagrams) as transport layer.
Save	Click to save changes.
Reset	Click to undo any changes made locally and revert to previously saved values.
Renew	Click to renew DHCP. This button is only available if DHCP is enabled.

4.1.2.4 HTTPS

Label	Description
Mode	Indicates the HTTPS mode operation. Possible modes are:
	Enabled: Enable HTTPS mode operation.
	Disabled: Disable HTTPS mode operation.
Automatic Redirect	Indicates the HTTPS redirect mode operation. Automatic redirect
	web browser to HTTPS during HTTPS mode enabled. Possible
	modes are:
	Enabled: Enable HTTPS redirect mode operation.
	Disabled: Disable HTTPS redirect mode operation.
Save	Click to save changes.
Reset	Click to undo any changes made locally and revert to previously
	saved values.

4.1.2.5 SSH

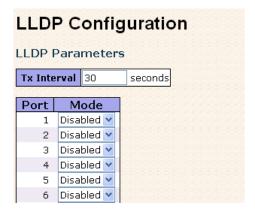

Label	Description
Mode	Indicates the SSH mode operation. Possible modes are:
	Enabled: Enable SSH mode operation.
	Disabled: Disable SSH mode operation.
Save	Click to save changes.
Reset	Click to undo any changes made locally and revert to previously
	saved values.

4.1.2.6 LLDP

LLDP Parameters

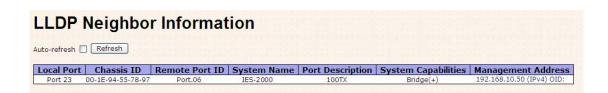

This page allows the user to inspect and configure the current LLDP port settings.

Label	Description
Tx Interval	The switch is periodically transmitting LLDP frames to its neighbors for having the network discovery information up-to-date. The interval between each LLDP frame is determined by the Tx Interval value. Valid values are restricted to 5 - 32768 seconds.
Port	The switch port number of the logical LLDP port.
Mode	Enable or disable LLDP

LLDP Neighbor Information

This page provides a status overview for all LLDP neighbors. The displayed table contains a row for each port on which an LLDP neighbor is detected. The columns hold the following information:

Label	Description
Local Port	The port on which the LLDP frame was received.
Chassis ID	The Chassis ID is the identification of the neighbor's LLDP
	frames.

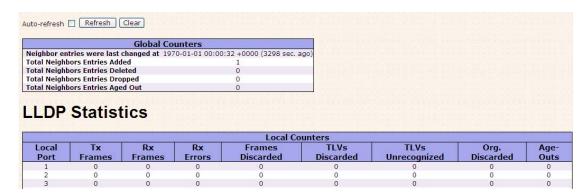

Remote Port ID	The Remote Port ID is the identification of the neighbor port.
System Name	System Name is the name advertised by the neighbor unit.
Don't December (100	Port Description is the port description advertised by the neighbor
Port Description	unit.
	System Capabilities describes the neighbor unit's capabilities.
	The possible capabilities are:
	1. Other
	2. Repeater
	3. Bridge
	4. WLAN Access Point
System Capabilites	5. Router
	6. Telephone
	7. DOCSIS cable device
	8. Station only
	9. Reserved
	When a capability is enabled, the capability is followed by (+). If
	the capability is disabled, the capability is followed by (-).
	Management Address is the neighbor unit's address that is used
Management	for higher layer entities to assist the discovery by the network
Address	management. This could for instance hold the neighbor's IP
	address.
Refresh	Click to refresh the page immediately.
Auto-refresh	Check this box to enable an automatic refresh of the page at
	regular intervals.

LLDP Statistics

This page provides an overview of all LLDP traffic.

Two types of counters are shown. Global counters are counters that refer to the whole stack, switch, while local counters refer to counters for the currently selected switch.

Global Counters

Label	Description
Neighbor entries	Shows the time for when the last entry was last deleted or added.
were last changed at	It is also shows the time elapsed since last change was detected.
Total Neighbors	Shows the number of new entries added since switch reheat
Entries Added	Shows the number of new entries added since switch reboot.
Total Neighbors	Shows the number of new entries deleted since switch reboot.
Entries Deleted	
Total Neighbors	Shows the number of LLDP frames dropped due to that the entry
Entries Dropped	table was full.
Total Neighbors	Shows the number of entries deleted due to Time-To-Live
Entries Aged Out	expiring.

Local Counters

Label	Description
Local Port	The port on which LLDP frames are received or transmitted.
Tx Frames	The number of LLDP frames transmitted on the port.
Rx Frames	The number of LLDP frames received on the port.
Dy France	The number of received LLDP frames containing some kind of
Rx Errors	error.
	If an LLDP frame is received on a port, and the switch's internal
	table has run full, the LLDP frame is counted and discarded. This
	situation is known as "Too Many Neighbors" in the LLDP
Frames Discarded	standard. LLDP frames require a new entry in the table when the
Frames Discarded	Chassis ID or Remote Port ID is not already contained within the
	table. Entries are removed from the table when a given port links
	down, an LLDP shutdown frame is received, or when the entry
	ages out.
	Each LLDP frame can contain multiple pieces of information,
TLVs Discarded	known as TLVs (TLV is short for "Type Length Value"). If a TLV is
	malformed, it is counted and discarded.
TI Vo Unropognizad	The number of well-formed TLVs, but with an unknown type
TLVs Unrecognized	value.
Org. Discarded	The number of organizationally TLVs received.

Age-Outs	Each LLDP frame contains information about how long time the
	LLDP information is valid (age-out time). If no new LLDP frame is
	received within the age out time, the LLDP information is
	removed, and the Age-Out counter is incremented.
Refresh	Click to refresh the page immediately.
Clear	Clears the local counters. All counters (including global counters)
	are cleared upon reboot.
Auto-refresh	Check this box to enable an automatic refresh of the page at
	regular intervals.

4.1.2.7 Backup/Restore Configuration

You can save/view or load the switch configuration. The configuration file is in XML format with a hierarchy of tags:

4.1.2.8 Firmware Update

This page facilitates an update of the firmware controlling the stack. switch.

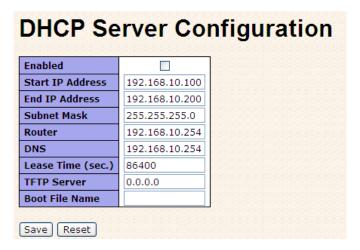

4.1.3DHCP Server

4.1.3.1 **Setting**

The system provides with DHCP server function. Enable the DHCP server function, the switch system will be a DHCP server.

4.1.3.2 DHCP Dynamic Client List

When the DHCP server function is activated, the system will collect the DHCP client information and display in here.

4.1.3.3 DHCP Client List

You can assign the specific IP address which is in the assigned dynamic IP range to the specific port. When the device is connecting to the port and asks for dynamic IP assigning, the system will assign the IP address that has been assigned before in the connected device.

4.1.4Port Setting

4.1.4.1 Port Control

This page displays current port configurations. Ports can also be configured here.

			Speed			Flow Control	Maximum	Excessive	Power
Port	Link	Current	Config	ured	Current Rx		Frame	Collision Mode	Control
1	•	Down	Auto	~	×	×	9600	Discard 💌	Disabled
2		Down	Auto	~	X	X	9600	Discard 💌	Disabled
3	•	Down	Auto	~	×	×	9600	Discard 💌	Disabled
4		Down	Auto	~	×	×	9600	Discard 💌	Disabled
5		Down	Auto	~	×	×	9600	Discard 💌	Disabled
6		Down	Auto	~	X	X	9600	Discard 💌	Disabled
7		Down	Auto	~	×	×	9600	Discard 💌	Disabled
8		Down	Auto	~	×	×	9600	Discard 💟	Disabled
9	•	Down	Auto	~	×	×	9600	Discard 💌	Disabled
10		Down	Auto	~	X	X	9600	Discard 🕶	Disabled

Label	Description									
Port	This is the logical port number for this row.									
Link	The current link state is displayed graphically. Green indicates the									
LINK	link is up and red that it is down.									
Current Link Speed	Provides the current link speed of the port.									
	Select any available link speed for the given switch port.									
Configured Link	Auto Speed selects the highest speed that is compatible with a									
Speed	link partner.									
	Disabled disables the switch port operation.									
	When Auto Speed is selected for a port, this section indicates the									
	flow control capability that is advertised to the link partner.									
	When a fixed-speed setting is selected, that is what is used. The									
	Current Rx column indicates whether pause frames on the poi									
Flow Control	are obeyed, and the Current Tx column indicates whether pause									
	frames on the port are transmitted. The Rx and Tx settings are									
	determined by the result of the last Auto-Negotiation.									
	Check the configured column to use flow control. This setting is									
	related to the setting for Configured Link Speed.									
Maximum Frame	Enter the maximum frame size allowed for the switch port,									
Waxiiiuiii I Iaiiie	including FCS. The allowed range is 1518 bytes to 9600 bytes.									
Excessive Collision	Configure port transmit collision behavior.									
Mode	Discard: Discard frame after 16 collisions (default).									
MOGE	Restart: Restart back-off algorithm after 16 collisions.									

	The Usage column shows the current percentage of the power							
	consumption per port. The Configured column allows for changing							
	the power savings mode parameters per port.							
Power Control	Disabled: All power savings mechanisms disabled.							
	ActiPHY: Link down power savings enabled.							
	PerfectReach: Link up power savings enabled.							
	Enabled: Both link up and link down power savings enabled.							
Total Power Usage	Total power usage in board, measured in percent.

Donat	Click to undo any changes made locally and revert to previously							
Reset	saved values.							
Defrach	Click to refresh the page. Any changes made locally will be							
Refresh	undone.							

4.1.4.2 Rate Limit

Configure the switch port rate limit for Policers and Shapers on this page.

Rate Limit Configuration											
Port	Policer Enabled	Policer Rate	Policer Unit	Shaper Enabled	Shaper Rate	Shaper Unit					
1		500	kbps 💌		500	kbps 💌					
2		500	kbps 💌		500	kbps 💌					
3		500	kbps 💌		500	kbps 💌					
4		500	kbps 💌		500	kbps 💌					
5		500	kbps 💌		500	kbps 💌					
6		500	kbps 💌		500	kbps 💌					
7		500	kbps 💌		500	kbps 💌					
8		500	kbps 💌		500	kbps 💌					
9		500	kbps 💌		500	kbps 💌					
10		500	kbps 💌		500	kbps 💌					

Label	Description						
Port	The logical port for the settings contained in the same row.						
Policer Enabled	Enable or disable the port policer. The default value is "Disabled".						
	Configure the rate for the port policer. The default value is "500".						
Policer Rate	This value is restricted to 500-1000000 when the "Policer Unit" is						
Folicer Rate	"kbps", and it is restricted to 1-1000 when the "Policer Unit" is						
	"Mbps"						

Policer Unit	Configure the unit of measure for the port policer rate as kbps or Mbps. The default value is "kbps".
Shaper Enabled	Enable or disable the port shaper. The default value is "Disabled".
Shaper Rate	Configure the rate for the port shaper. The default value is "500". This value is restricted to 500-1000000 when the "Policer Unit" is "kbps", and it is restricted to 1-1000 when the "Policer Unit" is "Mbps"
Shaper Unit	Configure the unit of measure for the port shaper rate as kbps or Mbps. The default value is "kbps".
Save :	Click to save changes.
Reset	Click to undo any changes made locally and revert to previously saved values.

4.1.4.3 Port Trunk

4.1.4.3.1 Trunk Configuration

This page is used to configure the Aggregation hash mode and the aggregation group.

Aggregation Mode Configuration | Hash Code Contributors | | Source MAC Address | U | Destination MAC Address | U | P Address | U | TCP/UDP Port Number | U

Label	Description								
Source MAC Address	The Source MAC address can be used to calculate the								
	destination port for the frame. Check to enable the use of the								
	Source MAC address, or uncheck to disable. By default, Source								
	MAC Address is enabled.								
Destination MAC The Destination MAC Address can be used to calculate									
Address	destination port for the frame. Check to enable the use of the								
	Destination MAC Address, or uncheck to disable. By default,								
	Destination MAC Address is disabled.								
IP Address	The IP address can be used to calculate the destination port for								
	the frame. Check to enable the use of the IP Address, or uncheck								
	to disable. By default, IP Address is enabled.								
TCP/UDP Port	The TCP/UDP port number can be used to calculate the								

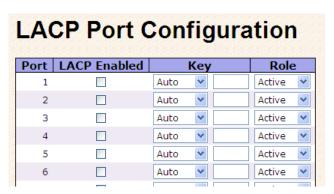

Number	destination port for the frame. Check to enable the use of the								
	TCP/UDP Port Number, or uncheck to disable. By default,								
	TCP/UDP Port Number is enabled.

Label	Description						
Group ID	Indicates the group ID for the settings contained in the same row.						
	Group ID "Normal" indicates there is no aggregation. Only one						
	group ID is valid per port.						
Port Members	Each switch port is listed for each group ID. Select a radio button						
	to include a port in an aggregation, or clear the radio button to						
	remove the port from the aggregation. By default, no ports belong						
	to any aggregation group. Only full duplex ports can join an						
	aggregation and ports must be in the same speed in each group.						

4.1.4.3.2 LACP Port Configuration

This page allows the user to inspect the current LACP port configurations, and possibly change them as well.

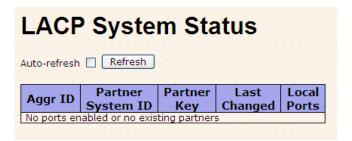

Label	Description
Port	Indicates the group ID for the settings contained in the same row.
	Group ID "Normal" indicates there is no aggregation. Only one
	group ID is valid per port.
LACP Enabled	Each switch port is listed for each group ID. Select a radio button
	to include a port in an aggregation, or clear the radio button to
	remove the port from the aggregation. By default, no ports belong
	to any aggregation group. Only full duplex ports can join an
	aggregation and ports must be in the same speed in each group.
Key	The Key value incurred by the port, range 1-65535 . The Auto
	setting will set the key as appropriate by the physical link speed,
	10Mb = 1, 100Mb = 2, 1Gb = 3. Using the Specific setting, a
	user-defined value can be entered. Ports with the same Key value
	can participate in the same aggregation group, while ports with
	different keys cannot.
Role	The Role shows the LACP activity status. The Active will transmit
	LACP packets each second, while Passive will wait for a LACP
	packet from a partner (speak if spoken to).
Save :	Click to save changes.
Reset	Click to undo any changes made locally and revert to previously saved values.

4.1.4.3.3 LACP System Status

This page provides a status overview for all LACP instances.

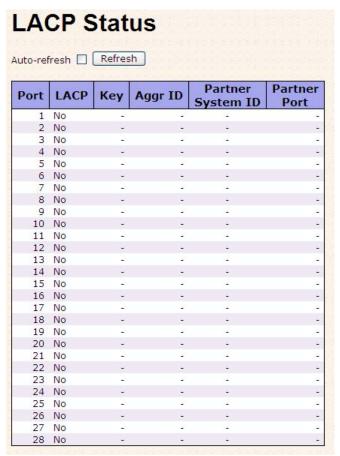

Label	Description					
Aggr ID	The Aggregation ID associated with this aggregation instance. For					
	LLAG the id is shown as 'isid:aggr-id' and for GLAGs as 'aggr-id'					
Partner System ID	The system ID (MAC address) of the aggregation partner.					

Partner Key	The Key that the partner has assigned to this aggregation ID.	
Last Changed	The time since this aggregation changed.	
Last Channged	Shows which ports are a part of this aggregation for this	
	switch/stack. The format is: "Switch ID:Port".	
Refresh :	Click to refresh the page immediately.	
Auto-refresh :	Check this box to enable an automatic refresh of the page at regular intervals.	

4.1.4.3.4 LACP Status

This page provides a status overview for LACP status for all ports.

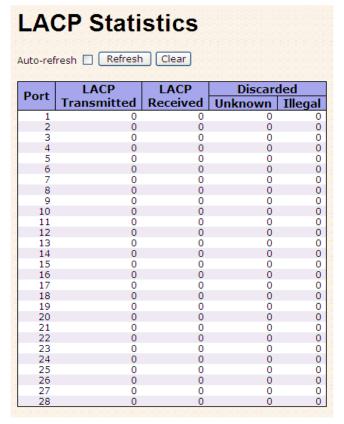

Label	Description
Port	The switch port number.
LACP 'Yes' means that LACP is enabled and the port link is up. 'I	
	means that LACP is not enabled or that the port link is down.
	'Backup' means that the port could not join the aggregation group

	but will join if other port leaves. Meanwhile it's LACP status is	
	disabled.	
Key	The key assigned to this port. Only ports with the same key can	
	aggregate together.	
Aggr ID	The Aggregation ID assigned to this aggregation group.	
Partner System ID	The partners System ID (MAC address).	
Partner Port	The partners port number connected to this port.	
Refresh :	Click to refresh the page immediately.	
Auto-refresh :	Check this box to enable an automatic refresh of the page at	
Auto-reliesii .	regular intervals.	

4.1.4.3.5 LACP Statistics

This page provides an overview for LACP statistics for all ports.

Label	Description
Port	The switch port number
LACP Transmitted Shows how many LACP frames have been sent from each port	
LACP Received	Shows how many LACP frames have been received at each port.

Discarded	Shows how many unknown or illegal LACP frames have been	
	discarded at each port.	
Refresh :	Click to refresh the page immediately.	
Auto-refresh 🗆	Check this box to enable an automatic refresh of the page at regular intervals.	
Clear	Clears the counters for all ports	

4.1.4.4 Loop Guard

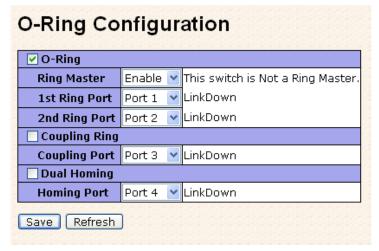

Loop Guard is a looping detection/avoid strategy, it helps network administrator to avoid looping issue.

Label	Description
Active	Enable Loop Guard function
Port State Guarding: This port is protected against looping.	
	Locked:This port has been locked to avoid looping.

4.1.5 Redundancy

4.1.5.1 O-Ring

Ring is the most powerful Ring in the world. The recovery time of Ring is less than 10 ms. It can reduce unexpected damage caused by network topology change. Ring Supports 3 Ring topology: Ring, Coupling Ring and Dual Homing.

Ring interface

The following table describes the labels in this screen.

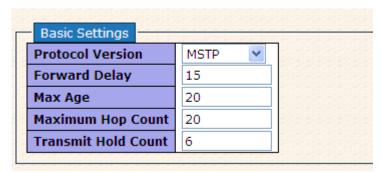

Label	Description	
O-Ring	Mark to enable O-Ring.	
	There should be one and only one Ring Master in a ring.	
	However if there are two or more switches which set Ring	
Ring Master	Master to enable, the switch with the lowest MAC address will	
	be the actual Ring Master and others will be Backup Masters.	
1 st Ring Port	The primary port, when this switch is enable O-Ring	
2 nd Ring Port	The backup port, when this switch is enable O-Ring	
Coupling Ring	Mark to enable Coupling Ring. Coupling Ring can be used to	
	divide a big ring into two smaller rings to avoid effecting all	
	switches when network topology change. It is a good	
	application for connecting two Rings.	
Coupling Port	Link to Coupling Port of the switch in another ring. Coupling	
	Ring need four switch to build an active and a backup link.	
	Set a port as coupling port. The coupled four ports of four	
	switches will be run at active/backup mode.	
Dual Homing	Mark to enable Dual Homing. By selecting Dual Homing	
	mode, Ring will be connected to normal switches through	
	two RSTP links (ex: backbone Switch). The two links work as	
	active/backup mode, and connect each Ring to the normal	
	switches in RSTP mode.	
Apply	Click "Apply" to set the configurations.	

Note: We don't suggest you to set one switch as a Ring Master and a Coupling Ring at the same time due to heavy load.

4.1.5.2 MSTP

Bridge Settings

This page allows you to configure RSTP system settings. The settings are used by all RSTP Bridge instances in the Switch Stack.

Label Description

Protocol Version The STP protocol version setting. Valid values are STP, F and MSTP. The delay used by STP Bridges to transition Root and Design	STP	
and MSTP.		
The delay used by STP Bridges to transition Root and Design		
The delay dised by STI Bridges to transition root and Design	ated	
Forward Delay Ports to Forwarding (used in STP compatible mode). Valid v	Ports to Forwarding (used in STP compatible mode). Valid values	
are in the range 4 to 30 seconds.		
The maximum age of the information transmitted by the B	ridge	
Max Age when it is the Root Bridge. Valid values are in the range 6	o 40	
seconds, and MaxAge must be <= (FwdDelay-1)*2.		
This defines the initial value of remainingHops for	MSTI	
information generated at the boundary of an MSTI region	n. It	
Maximum Hop Count defines how many bridges a root bridge can distribute its B	PDU	
information. Valid values are in the range 4 to 30 seconds	and	
MaxAge must be <= (FwdDelay-1)*2.		
The number of BPDU's a bridge port can send per second. V	Vhen	
Transmit Hold Count exceeded, transmission of the next BPDU will be delayed.	Valid	
values are in the range 1 to 10 BPDU's per second.		
Save Click to save changes.		
Onor to save shanges.		
Click to undo any changes made locally and revert to previ-	ously	
saved values.		

MSTI Mapping

This page allows the user to inspect the current STP MSTI bridge instance priority configurations, and possibly change them as well.

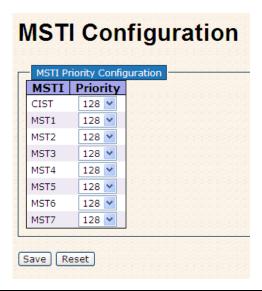

nfiguration Identification		
onfiguration Name	00-1e-94-96-00-00	
onfiguration Revision	0	
MSTI Mapping		
MSTI	VLANs Mapped	
MST1		^
мста		^
MST2		~
MST3		0
IST4		^
1514		~
MST5		0
VI		100
MST6		^
MST6		^ ~

Label	Description	
Configuration Name	The name identifiying the VLAN to MSTI mapping. Bridges must	
	share the name and revision (see below), as well as the	
	VLAN-to-MSTI mapping configuration in order to share spanning	
	trees for MSTI's. (Intra-region). The name is at most 32	
	characters.	
Configuration	The revision of the MSTI configuration named above. This must	
Revision	be an integer between 0 and 65535.	
MSTI	The bridge instance. The CIST is not available for explicit	
	mapping, as it will receive the VLANs not explicitly mapped.	
VLANS Mapped	The list of VLAN's mapped to the MSTI. The VLANs must be	
	separated with comma and/or space. A VLAN can only be	
	mapped to one MSTI. A unused MSTI should just be left empty.	
	(I.e. not having any VLANs mapped to it.)	
Save	Click to save changes.	
Reset	Click to undo any changes made locally and revert to previously	
	saved values.	

MSTI Priorities

This page allows the user to inspect the current STP MSTI bridge instance priority configurations, and possibly change them as well.

Label	Description
MSTI	The bridge instance. The CIST is the default instance, which is
	always active.
	Controls the bridge priority. Lower numerical values have better
Drievity	priority. The bridge priority plus the MSTI instance number,
Priority	concatenated with the 6-byte MAC address of the switch forms a
	Bridge Identifier.
Save	Click to save changes.
Reset	Click to undo any changes made locally and revert to previously
Reset	saved values.

CIST Ports

This page allows the user to inspect the current STP CIST port configurations, and possibly change them as well. This page contains settings for physical and aggregated ports. The aggregation settings are stack global.

STP CIST Ports Configuration

CIST A	Aggregated F	Ports Configuration					2222		
Port	STP Enabled	Path Cost	Priority	Admin Edge	Auto Edge	Restr Role	ricted TCN	BPDU Guard	Point-to- point
-		Auto 💌	128 🕶	Edge 💌	V				Forced True 💌

CIST I	Normal Ports	Configu	ratio	1			10-1-1-					
Port	STP Enabled	Pä	ath (Cost	Priority	Admin E	dge	Auto Edge	Restr Role	BPDU Guard	Point poir	
1		Auto	*		128 🕶	Edge	*	~			Auto	*
2		Auto	*		128 🕶	Edge	~	~			Auto	~
3		Auto	~		128 🕶	Edge	~	✓			Auto	~
4		Auto	v		128 💌	Edge	~	~			Auto	~
5		Auto	~		128 🕶	Edge	~	~			Auto	~
6		Auto	~		128 🕶	Edge	~	~			Auto	~
7		Auto	~		128 💌	Edge	~	~			Auto	~
8		Auto	~		128 💌	Edge	~	~			Auto	~
9		Auto	*		128 💌	Edge	~	▽			Auto	~
10		Auto	~		128 💌	Edge	~	~			Auto	~

Label	Description
Port	The switch port number of the logical STP port.
STP Enabled	Controls whether STP is enabled on this switch port.
	Controls the path cost incurred by the port. The Auto setting will
	set the path cost as appropriate by the physical link speed, using
	the 802.1D recommended values. Using the Specific setting, a
Path Cost	user-defined value can be entered. The path cost is used when
	establishing the active topology of the network. Lower path cost
	ports are chosen as forwarding ports in favor of higher path cost
	ports. Valid values are in the range 1 to 200000000.
Duinnitu	Controls the port priority. This can be used to control priority of
Priority	ports having identical port cost. (See above).
	Operational flag describing whether the port is connecting directly
OpenEdge(setate	to edge devices. (No Bridges attached). Transitioning to the
flag)	forwarding state is faster for edge ports (having operEdge true)
	than for other ports.
A desire E desa	Controls whether the operEdge flag should start as beeing set or
AdminEdge	cleared. (The initial operEdge state when a port is initialized).
	Controls whether the bridge should enable automatic edge
AutoEdge	detection on the bridge port. This allows operEdge to be derived
	from whether BPDU's are received on the port or not.
	If enabled, causes the port not to be selected as Root Port for the
Restricted Role	CIST or any MSTI, even if it has the best spanning tree priority
	vector. Such a port will be selected as an Alternate Port after the

	Root Port has been selected. If set, it can cause lack of spanning
	tree connectivity. It can be set by a network administrator to
	prevent bridges external to a core region of the network
	influencing the spanning tree active topology, possibly because
	those bridges are not under the full control of the administrator.
	This feature is also know as Root Guard.
	If enabled, causes the port not to propagate received topology
	change notifications and topology changes to other ports. If set it
	can cause temporary loss of connectivity after changes in a
	spanning trees active topology as a result of persistent incorrectly
	learned station location information. It is set by a network
Restricted TCN	administrator to prevent bridges external to a core region of the
	network, causing address flushing in that region, possibly
	because those bridges are not under the full control of the
	administrator or is the physical link state for the attached LANs
	transitions frequently.
	Controls whether the port connects to a point-to-point LAN rather
D : 40D : 4	than a shared medium. This can be automatically determined, or
Point2Point	forced either true or false. Transition to the forwarding state is
	faster for point-to-point LANs than for shared media.
Save	Click to save changes.
Daret	Click to undo any changes made locally and revert to previously
Reset	saved values.

MSTI Ports

This page allows the user to inspect the current STP MSTI port configurations, and possibly change them as well. A MSTI port is a virtual port, which is instantiated seperately for each active CIST (physical) port for each MSTI instance configured and applicable for the port. The MSTI instance must be selected before displaying actual MSTI port configuration options. This page contains MSTI port settings for physical and aggregated ports. The aggregation settings are stack global.

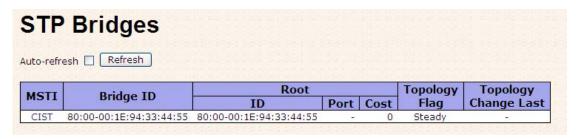

Label	Description
Port	The switch port number of the corresponding STP CIST (and
Port	MSTI) port.
	Controls the path cost incurred by the port. The Auto setting will
	set the path cost as appropriate by the physical link speed, using
	the 802.1D recommended values. Using the Specific setting, a
Path Cost	user-defined value can be entered. The path cost is used when
	establishing the active topology of the network. Lower path cost
	ports are chosen as forwarding ports in favor of higher path cost
	ports. Valid values are in the range 1 to 200000000.
Duiovitu	Controls the port priority. This can be used to control priority of
Priority	ports having identical port cost. (See above).
Save	Click to save changes.
Ponet	Click to undo any changes made locally and revert to previously
Reset	saved values.

STP Bridges

This page provides a status overview for all STP bridge instances.

The displayed table contains a row for each STP bridge instance, where the column displays the following information:

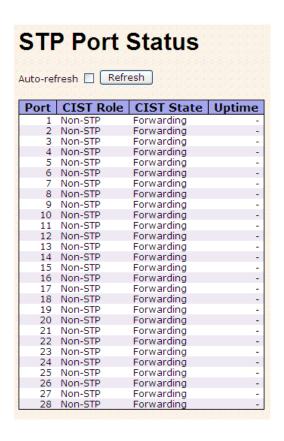

Label	Description		
MSTI	The Bridge Instance. This is also a link to the STP Detailed Bridge		
IVISTI	Status.		
Bridge ID	The Bridge ID of this Bridge instance.		
Root ID	The Bridge ID of the currently elected root bridge.		
Root Port	The switch port currently assigned the root port role.		
	Root Path Cost. For the Root Bridge this is zero. For all other		
Root Cost	Bridges, it is the sum of the Port Path Costs on the least cost path		
	to the Root Bridge.		
Topology Flag	The current state of the Topology Change Flag for this Bridge		
торогоду глад	instance.		
Topology Change	The time since last Topology Change occurred.		
Last	The time since last ropology change occurred.		
Refresh :	Click to refresh the page immediately.		
Auto-refresh :	Check this box to enable an automatic refresh of the page at		
Auto-reliesti .	regular intervals.		

STP Port Status

This page displays the STP CIST port status for port physical ports in the currently selected switch.

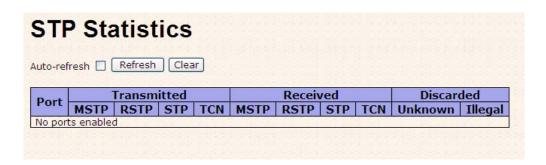

Label	Description
Port	The switch port number of the logical STP port.
	The current STP port role of the CIST port. The port role can be
CIST Role	one of the following values: AlternatePort BackupPort RootPort
	DesignatedPort.
State	The current STP port state of the CIST port. The port state can be
State	one of the following values: Blocking Learning Forwarding.
Uptime	The time since the bridge port was last initialized.
Refresh :	Click to refresh the page immediately.
Auto-refresh :	Check this box to enable an automatic refresh of the page at
Auto-refresh []	regular intervals.

STP Statistics

This page displays the RSTP port statistics counters for bridge ports in the currently selected switch.

Label	Description					
Port	The switch port number of the logical RSTP port.					
RSTP	The number of RSTP Configuration BPDU's received/transmitted					
	on the port.					
STP	The number of legacy STP Configuration BPDU's					
Sir	received/transmitted on the port.					
TCN	The number of (legacy) Topology Change Notification BPDU's					
ICN	received/transmitted on the port.					
Discouded University	The number of unknown Spanning Tree BPDU's received (and					
Discarded Unknown	discarded) on the port.					
Discourded Illered	The number of illegal Spanning Tree BPDU's received (and					
Discarded Illegal	discarded) on the port.					
Refresh :	Click to refresh the page immediately.					
Auto refresh	Check this box to enable an automatic refresh of the page at					
Auto-refresh :	regular intervals.					

4.1.6VLAN

4.1.6.1 VLAN Membership Configuration

The VLAN membership configuration for the selected stack switch unit switch can be monitored and modified here. Up to 64 VLANs are supported. This page allows for adding and deleting VLANs as well as adding and deleting port members of each VLAN.

VLAN Membership Configuration Port Members Delete VLAN ID 1 2 3 4 5 6 7 8 9 10 11 12 13 24 25 26 27 28 1 V<

Label	Description
Delete	Check to delete the entry. It will be deleted during the next save.
VLAN ID	The VLAN ID for the entry.
MAC Address	The MAC address for the entry.
Port Members	Checkmarks indicate which ports are members of the entry. Check or uncheck as needed to modify the entry.
Adding a New Static Entry	Click Add New VLAN to add a new VLAN ID. An empty row is added to the table, and the VLAN can be configured as needed. Legal values for a VLAN ID are 1 through 4095. The VLAN is enabled on the selected stack switch unit when you click on "Save". The VLAN is thereafter present on the other stack switch units, but with no port members. A VLAN without any port members on any stack unit will be deleted when you click "Save". The Delete button can be used to undo the addition of new VLANs.

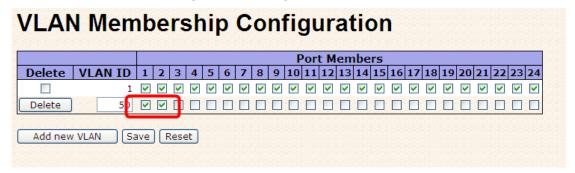

Example:

Port-based VLAN Setting

(For ingress port)

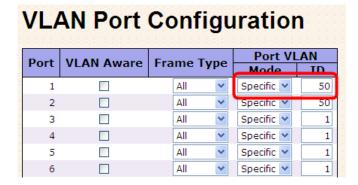

1. VLAN Membership Configuration setting port 1 & VID=50

2. VLAN Port 1 Configuration → Disable VLAN Aware

3. VLAN Port 1 Configuration → Mode=specific,ID=50

(For egress port)

1. VLAN Membership Configuration setting port 2 & VID=50

2. VLAN Port 2 Configuration → don't care VLAN Aware

VLAN Port Configuration Port VLAN **VLAN Aware Port** Frame Type Mode Αll Specific 🕶 50 1 ΔII 2 Specific Y 50 3 Specific > 1 ΑII 4 Specific > 1

4.1.6.2 Private VLAN

The Private VLAN membership configurations for the switch can be monitored and modified here. Private VLANs can be added or deleted here. Port members of each Private VLAN can be added or removed here. Private VLANs are based on the source port mask, and there are no connections to VLANs. This means that VLAN IDs and Private VLAN IDs can be identical. A port must be a member of both a VLAN and a Private VLAN to be able to forward packets. By default, all ports are VLAN unaware and members of VLAN 1 and Private VLAN 1. A VLAN unaware port can only be a member of one VLAN, but it can be a member of multiple Private VLANs.

Label	Description	
Delete	Check to delete the entry. It will be deleted during the next save.	
Private VLAN ID	Indicates the ID of this particular private VLAN.	
MAC Address	The MAC address for the entry.	
	A row of check boxes for each port is displayed for each private VLAN ID. To include a port in a Private VLAN, check the box. To	
Port Members	remove or exclude the port from the Private VLAN, make sure the	
	box is unchecked. By default, no ports are members, and all	
	boxes are unchecked.	
Adding a New Static Entry	Click Add New Private VLAN to add a new private VLAN ID. An empty row is added to the table, and the private VLAN can be configured as needed. The allowed range for a private VLAN ID is the same as the switch port number range. Any values outside this range are not accepted, and a warning message appears. Click "OK" to discard the incorrect entry, or click "Cancel" to return to the editing and make a correction. The Private VLAN is enabled when you click "Save". The Delete button can be used to undo the addition of new Private VLANs.	

Port Isolation Configuration Port Number 1 2 3 4 5 6 7 8 9 10111213141516171819202122232425262728 Save Reset

Label	Description	
Port Members	A check box is provided for each port of a private VLAN.	
	When checked, port isolation is enabled for that port.	
	When unchecked, port isolation is disabled for that port.	
	By default, port isolation is disabled for all ports.	

4.1.7SNMP

4.1.7.1 SNMP-System

SNMP System Configuration

Mode	Enabled	
Version	SNMP v2c	~
Read Community	public	
Write Community private		
Engine ID	800007e5017f000001	

Label	Description		
	Indicates the SNMP mode operation. Possible modes are:		
Mode	Enabled: Enable SNMP mode operation.		
	Disabled: Disable SNMP mode operation.		
	Indicates the SNMP supported version. Possible versions are:		
Version	SNMP v1: Set SNMP supported version 1.		
version	SNMP v2c: Set SNMP supported version 2c.		
	SNMP v3: Set SNMP supported version 3.		
	Indicates the community read access string to permit access to		
	SNMP agent. The allowed string length is 0 to 255, and the allowed		
Read Community	content is the ASCII characters from 33 to 126.		
Read Community	The field only suits to SNMPv1 and SNMPv2c. SNMPv3 is using		
	USM for authentication and privacy and the community string will		
	associated with SNMPv3 communities table		
	Indicates the community write access string to permit access to		
	SNMP agent. The allowed string length is 0 to 255, and the allowed		
Write Community	content is the ASCII characters from 33 to 126.		
write Community	The field only suits to SNMPv1 and SNMPv2c. SNMPv3 is using		
	USM for authentication and privacy and the community string will		
	associated with SNMPv3 communities table.		
Engine ID	Indicates the SNMPv3 engine ID. The string must contain an even		
	number between 10 and 64 hexadecimal digits, but all-zeros and		
Liigiiie ib	all-'F's are not allowed. Change of the Engine ID will clear all original		
	local users.		

Label	Description		
Trap Mode	Indicates the SNMP trap mode operation. Possible modes are:		
	Enabled: Enable SNMP trap mode operation.		
	Disabled: Disable SNMP trap mode operation.		
	Indicates the SNMP trap supported version. Possible versions are:		
Tran Varsian	SNMP v1: Set SNMP trap supported version 1.		
Trap Version	SNMP v2c: Set SNMP trap supported version 2c.		
	SNMP v3: Set SNMP trap supported version 3.		
	Indicates the community access string when send SNMP trap packet.		
Trap Community	The allowed string length is 0 to 255, and the allowed content is the		
	ASCII characters from 33 to 126.		
Trap Destination	Indicates the SNMP trap destination address.		
Address	Trap Destination IPv6 Address		
	Provide the trap destination IPv6 address of this switch. IPv6 address		
	is in 128-bit records represented as eight fields of up to four		
Trap Destination	hexadecimal digits with a colon separates each field (:). For example,		
IPv6 Address	'fe80:215:c5ff:fe03:4dc7'. The symbol '::' is a special syntax that can		
IPVO Address	be used as a shorthand way of representing multiple 16-bit groups of		
	contiguous zeros; but it can only appear once. It also used a		
	following legally IPv4 address. For example, '::192.1.2.34'.		
Trap	Indicates the SNMP entity is permitted to generate authentication		
Authentication	failure traps. Possible modes are:		
Failure	Enabled: Enable SNMP trap authentication failure.		
	Disabled: Disable SNMP trap authentication failure.		
Tran Link up and	Indicates the SNMP trap link-up and link-down mode operation.		
Trap Link-up and Link-down	Possible modes are:		
LINK-GOWN	Enabled: Enable SNMP trap link-up and link-down mode operation.		

	Disabled: Disable SNMP trap link-up and link-down mode operation.		
	· · ·		
	Indicates the SNMP trap inform mode operation. Possible modes		
Trap Inform Mode	are:		
map inform wode	Enabled: Enable SNMP trap inform mode operation.		
	Disabled: Disable SNMP trap inform mode operation.		
Trap Inform	Indicates the SNMP trap inform timeout. The allowed range is 0 to		
Timeout(seconds)	2147.		
Trap Inform Retry	Indicates the SNMP trap inform retry times. The allowed range is 0 to		
Times	255.		
	Indicates the SNMP trap probe security engine ID mode of operation		
	Possible values are:		
Trap Probe	Enabled: Enable SNMP trap probe security engine ID mode of		
Security Engine ID	operation.		
	Disabled: Disable SNMP trap probe security engine ID mode of		
	operation.		

	Indicates the SNMP trap security engine ID. SNMPv3 sends traps
	and informs using USM for authentication and privacy. A unique
Tron Coourity	engine ID for these traps and informs is needed. When "Trap Probe
Trap Security Engine ID	Security Engine ID" is enabled, the ID will be probed automatically.
	Otherwise, the ID specified in this field is used. The string must
	contain an even number between 10 and 64 hexadecimal digits, but
	all-zeros and all-'F's are not allowed.
Trap Security Name	Indicates the SNMP trap security name. SNMPv3 traps and informs
	using USM for authentication and privacy. A unique security name is
	needed when traps and informs are enabled.

4.1.7.2 SNMP-Communities

Configure SNMPv3 communities table on this page. The entry index key is Community.

Label	Description
Delete	Check to delete the entry. It will be deleted during the next save.
	Indicates the community access string to permit access to SNMPv3
Community	agent. The allowed string length is 1 to 32, and the allowed content is
	the ASCII characters from 33 to 126.
Source IP	Indicates the SNMP access source address.
Source Mask	Indicates the SNMP access source address mask.

4.1.7.3 SNMP-Users

Configure SNMPv3 users table on this page. The entry index keys are Engine ID and User Name.

Label	Description	
Delete	Check to delete the entry. It will be deleted during the next save.	
	An octet string identifying the engine ID that this entry should belong	
	to. The string must contain an even number between 10 and 64	
	hexadecimal digits, but all-zeros and all-'F's are not allowed. The	
	SNMPv3 architecture uses the User-based Security Model (USM) for	
	message security and the View-based Access Control Model (VACM)	
Engine ID	for access control. For the USM entry, the usmUserEngineID and	
Engine ID	usmUserName are the entry's keys. In a simple agent,	
	usmUserEngineID is always that agent's own snmpEngineID value.	
	The value can also take the value of the snmpEngineID of a remote	
	SNMP engine with which this user can communicate. In othe words,	
	if user engine ID equal system engine ID then it is local user;	
	otherwize it's remote user.	
	A string identifying the user name that this entry should belong to.	
User Name	The allowed string length is 1 to 32, and the allowed content is the	
	ASCII characters from 33 to 126.	

	Indicates the security model that this entry should belong to. Possible
	security models are:
	NoAuth, NoPriv: None authentication and none privacy.
Security Level	Auth, NoPriv: Authentication and none privacy.
	Auth, Priv: Authentication and privacy.
	The value of security level cannot be modified if entry already exists.
	That means must first ensure that the value is set correctly.
	Indicates the authentication protocol that this entry should belong to.
	Possible authentication protocols are:
	None: None authentication protocol.
	MD5: An optional flag to indicate that this user using MD5
Authentication	authentication protocol.
Protocol	SHA: An optional flag to indicate that this user using SHA
	authentication protocol.
	The value of security level cannot be modified if entry already exists.
	That means must first ensure that the value is set correctly.
	A string identifying the authentication pass phrase. For MD5
Authentication	authentication protocol, the allowed string length is 8 to 32. For SHA
Password	authentication protocol, the allowed string length is 8 to 40. The
	allowed content is the ASCII characters from 33 to 126.
	Indicates the privacy protocol that this entry should belong to.
	Possible privacy protocols are:
Privacy Protocol	None: None privacy protocol.
	DES: An optional flag to indicate that this user using DES
	authentication protocol.
	A string identifying the privacy pass phrase. The allowed string length
Privacy Password	is 8 to 32, and the allowed content is the ASCII characters from 33 to
	126.
	1

4.1.7.4 SNMP-Groups

Configure SNMPv3 groups table on this page. The entry index keys are Security Model and Security Name.

SNMPv3 Groups Configuration

Delete	Security Model	Security Name	Group Name
	v1	public	default_ro_group
	v1	private	default_rw_group
	v2c	public	default_ro_group
	v2c	private	default_rw_group
	usm	default_user	default_rw_group
Add new group Save Reset			

Label	Description	
Delete	Check to delete the entry. It will be deleted during the next save.	
	Indicates the security model that this entry should belong to. Possible	
	security models are:	
Security Model	v1: Reserved for SNMPv1.	
	v2c: Reserved for SNMPv2c.	
	usm: User-based Security Model (USM).	
	A string identifying the security name that this entry should belong to.	
Security Name	The allowed string length is 1 to 32, and the allowed content is the	
	ASCII characters from 33 to 126.	
	A string identifying the group name that this entry should belong to.	
Group Name	The allowed string length is 1 to 32, and the allowed content is the	
	ASCII characters from 33 to 126.	

4.1.7.5 **SNMP-Views**

Configure SNMPv3 views table on this page. The entry index keys are View Name and OID Subtree.

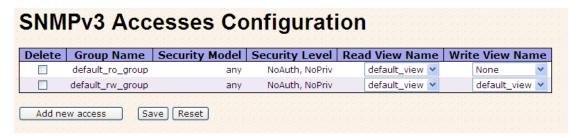

Label	Description
Delete	Check to delete the entry. It will be deleted during the next save.
View Name	A string identifying the view name that this entry should belong to.

	The allowed string length is 1 to 32, and the allowed content is the
	ASCII characters from 33 to 126.
	Indicates the view type that this entry should belong to. Possible view
	types are:
	included: An optional flag to indicate that this view subtree should be
	included.
View Type	excluded: An optional flag to indicate that this view subtree should be
	excluded.
	General, if a view entry's view type is 'excluded', it should be exist
	another view entry which view type is 'included' and it's OID subtree
	overstep the 'excluded' view entry.
	The OID defining the root of the subtree to add to the named view.
OID Subtree	The allowed OID length is 1 to 128. The allowed string content is
	digital number or asterisk(*).

4.1.7.6 SNMP-Accesses

Configure SNMPv3 accesses table on this page. The entry index keys are Group Name, Security Model and Security Level.

Label	Description
Delete	Check to delete the entry. It will be deleted during the next save.
	A string identifying the group name that this entry should belong to.
Group Name	The allowed string length is 1 to 32, and the allowed content is the
	ASCII characters from 33 to 126.
	Indicates the security model that this entry should belong to. Possible
	security models are:
Security Medal	any: Accepted any security model (v1 / v2c / usm).
Security Model	v1: Reserved for SNMPv1.
	v2c: Reserved for SNMPv2c.
	usm: User-based Security Model (USM).

	Indicates the security model that this entry should belong to. Possible		
	security models are:		
Security Level	NoAuth, NoPriv: None authentication and none privacy.		
	Auth, NoPriv: Authentication and none privacy.		
	Auth, Priv: Authentication and privacy.		
	The name of the MIB view defining the MIB objects for which this		
Read View Name	request may request the current values. The allowed string length is		
Read view Name	1 to 32, and the allowed content is the ASCII characters from 33 to		
	126.		
	The name of the MIB view defining the MIB objects for which this		
Write View Name	request may potentially SET new values. The allowed string length is		
write view name	1 to 32, and the allowed content is the ASCII characters from 33 to		
	126.		

4.1.8 Traffic Prioritization

4.1.8.1 Port Configuration

This page allows you to configure QoS settings for each port.

Frames can be classified by 4 different QoS classes: Low, Normal, Medium, and High.

The classification is controlled by a QCL that is assigned to each port.

A QCL consists of an ordered list of up to 12 QCEs.

Each QCE can be used to classify certain frames to a specific QoS class.

This classification can be based on parameters such as VLAN ID, UDP/TCP port, IPv4/IPv6 DSCP or Tag Priority.

Frames not matching any of the QCEs are classified to the default QoS class for the port.

Port QoS Configuration

Number of Classes 4 🔻

Ingress Configuration						tion	Egress Configuration				
Dant	D = 6 = 4	Cl		001		To a Daisaita	Outside Made		Queue \	Neighted	
Port	Default	Class	•	QCI	- #	Tag Priority	Queuing Mode	Low	Normal	Medium	High

2	Lov	/ ~		1	~	0 🕶	Strict Priority 💌	1 ~	2 🗸	4 🗸	8 ~
3	Hig	h v		1	~	0 🕶	Strict Priority 🗸	1 ~	2 ~	4 ~	8 ~
4	Lov	/ ~		1	~	0 🕶	Strict Priority 💌	1 ~	2 🗸	4 🗸	8 ~
5	Lov	/ ~		1	~	0 🕶	Strict Priority 💌	1 ~	2 ~	4 ~	8 ~
6	Lov	/ ~		1	~	0 🕶	Strict Priority 💌	1 ~	2 🗸	4 🗸	8 ٧
7	Lov	/ ~		1	~	0 🕶	Strict Priority 💌	1 ~	2 ~	4 ~	8 ~
8	Lov	/ ~		1	~	0 🕶	Strict Priority 💌	1 ~	2 🗸	4 🗸	8 ~
9	Lov	/ ~		1	~	0 🕶	Strict Priority 💌	1 ~	2 ~	4 ~	8 ~
10	Lov	/ ~		1	~	0 🕶	Strict Priority 🕶	1 ~	2 🗸	4 🗸	8 ~

Label	Description		
	A check box is provided for each port of a private VLAN.		
Port	When checked, port isolation is enabled for that port.		
Port	When unchecked, port isolation is disabled for that port.		
	By default, port isolation is disabled for all ports.		
Default Class	Configure the default QoS class for the port, that is, the QoS class		
Default Class	for frames not matching any of the QCEs in the QCL.		
QCL#	Select which QCL to use for the port.		
Ton Brigarity	Select the default tag priority for this port when adding a Tag to		
Tag Priority	the untagged frames.		
Queuing Mode	Select which Queuing mode for this port.		
Quaya Waightad	Setting Queue weighted (Low=Normal, Medium=High) if the		
Queue Weighted	"Queuing Mode" is "Weighted".		

4.1.8.2 QoS Control List

This page lists the QCEs for a given QCL.

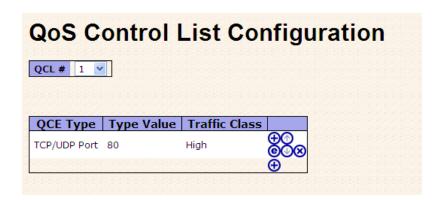

Frames can be classified by 4 different QoS classes: Low, Normal, Medium, and High.

The classification is controlled by a QoS assigned to each port.

A QCL consists of an ordered list of up to 12 QCEs.

Each QCE can be used to classify certain frames to a specific QoS class.

This classification can be based on parameters such as VLAN ID, UDP/TCP port, IPv4/IPv6 DSCP or Tag Priority. Frames not matching any of the QCEs are classified to the default QoS Class for the port.

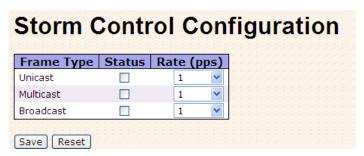

Label	Description
001#	Select a QCL to display a table that lists all the QCEs for that
QCL#	particular QCL.
	Specifies which frame field the QCE processes to determine the
	QoS class of the frame.
	The following QCE types are supported:
	Ethernet Type: The Ethernet Type field. If frame is tagged, this is
	the Ethernet Type that follows the tag header.
005 7:00	VLAN ID: VLAN ID. Only applicable if the frame is VLAN tagged.
QCE Tyep	TCP/UDP Port: IPv4 TCP/UDP source/destination port.
	DSCP: IPv4 and IPv6 DSCP.
	ToS: The 3 precedence bit in the ToS byte of the IPv4/IPv6 header
	(also known as DS field).
	Tag Priority: User Priority. Only applicable if the frame is VLAN
	tagged or priority tagged.

	Indicates the value according to its QCE type.		
	Ethernet Type: The field shows the Ethernet Type value.		
Type Value	VLAN ID: The field shows the VLAN ID.		
	TCP/UDP Port: The field shows the TCP/UDP port range.		
	DSCP: The field shows the IPv4/IPv6 DSCP value.		
Traffic Class	The QoS class associated with the QCE.		
	You can modify each QCE in the table using the following buttons:		
	: Inserts a new QCE before the current row.		
	: Edits the QCE.		
Modification Buttons	① : Moves the QCE up the list.		
Wodification Buttons	: Moves the QCE down the list.		
	Deletes the QCE.		
	The lowest plus sign adds a new entry at the bottom of the list of QCL.		

4.1.8.3 Storm Control

Storm control for the switch is configured on this page.

There is a unicast storm rate control, multicast storm rate control, and a broadcast storm rate control. These only affect flooded frames, i.e. frames with a (VLAN ID, DMAC) pair not present on the MAC Address table.

The rate is 2ⁿ, where n is equal to or less than 15, or "No Limit". The unit of the rate can be either pps (packets per second) or kpps (kilopackets per second). The configuration indicates the permitted packet rate for unicast, multicast, or broadcast traffic across the switch.

(Note: Frames, which are sent to the CPU of the switch are always limited to aproximately 4 kpps. For example, broadcasts in the management VLAN are limited to this rate. The management VLAN is configured on the IP setup page.)

Label	Description
Eromo Tymo	The settings in a particular row apply to the frame type listed here:
Frame Type	unicast, multicast, or broadcast.

Status	Enable or disable the storm control status for the given frame type.
	The rate unit is packet per second (pps), configure the rate as 1, 2, 4,
Rate	8, 16, 32, 64, 128, 256, 512, 1K, 2K, 4K, 8K, 16K, 32K, 64K, 128K,
Nate	256K, 512K, or 1024K.
	The 1 kpps is actually 1002.1 pps.

4.1.8.4 Wizard

This handy wizard helps you set up a QCL quickly.

Welcome to the QCL Configuration Wizard!

Please select an action:

- Set up IP Cam High Performance Increase IP Cam performance.
- Set up Port Policies
 Group ports into several types according to different QCL policies.
- Set up Typical Network Application Rules
 Set up the specific QCL for different typical network application quality control.
- Set up ToS Precedence Mapping
 Set up the traffic class mapping to the precedence part of ToS (3 bits) when receiving IPv4/IPv6 packets.
- Set up VLAN Tag Priority Mapping
 Set up the traffic class mapping to the user priority value (3 bits) when receiving VLAN tagged packets.

 To continue, click Next.

Next >

Label	Description
Set up	Group ports into several types according to different QCL policies.
Port Policies	Group ports into several types according to different QCL policies.
Set up Typical	Set up the specific QCL for different typical network application
Network	quality control.
Application Rules	quality control.
Set up ToS	Set up the traffic class mapping to the precedence part of ToS (3 bits)
Precedence	
Mapping	when receiving IPv4/IPv6 packets.
Set up VLAN Tag	Set up the traffic class mapping to the User Priority value (3 bits)
Priority Mapping	when receiving VLAN tagged packets.

4.1.9 IGMP Snooping

4.1.9.1 IGMP Snooping

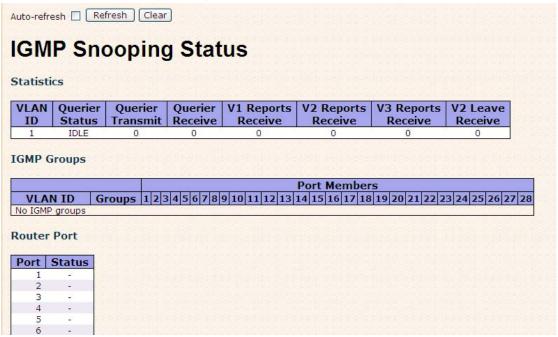

This page provides IGMP Snooping related configuration.

IGMF	Sno	oping C	onfiguration
Glo	bal Config	guration	
Snooping E	nabled		
Unregistere	ed IPMC Floo	ding enabled 🔲	
VLAN II		ng Enabled IO	GMP Querier
	1	<u> </u>	
			iguration
		ed Conf	iguration
			iguration
			iguration
Port R			iguration
Port Ro			iguration

Label	Description
Snooping Enabled	Enable the Global IGMP Snooping.
Unregistered	
IPMC Flooding	Enable unregistered IPMC traffic flooding.
enabled	
VLAN ID	The VLAN ID of the entry.
IGMP Snooping	Enable the per-VLAN IGMP Snooping.
Enabled	Enable the per-veaty idivir shooping.
IGMP Querier	Enable the IGMP Querier in the VLAN. The Querier will send out if no
	Querier received in 255 seconds after IGMP Querier Enabled. Each
	Querier's interval is 125 second, and it will stop act as an IGMP
	Querier if received any Querier from other devices.
Router Port	Specify which ports act as router ports. A router port is a port on the
	Ethernet switch that leads towards the Layer 3 multicast device or
	IGMP querier.
	If an aggregation member port is selected as a router port, the whole
	aggregation will act as a router port.
Fast Leave	Enable the fast leave on the port.

4.1.9.2 IGMP Snooping Status

Label	Description
VLAN ID	The VLAN ID of the entry.
Groups	The present IGMP groups. Max. are 128 groups for each VLAN.
Port Members	The ports that are members of the entry.
Querier Status	Show the Querier status is "ACTIVE" or "IDLE".
Querier Receive	The number of Transmitted Querier.
V1 Reports	The number of Received V1 Reports.
Receive	
V2 Reports	The number of Received V2 Reports
Receive	The number of Received V2 Reports.
V3 Reports	The number of Received V3 Reports.
Receive	The humber of Received vo Reports.
V2 Leave Receive	The number of Received V2 Leave.
Refresh	Click to refresh the page immediately.
Clear	Clears all Statistics counters.
Auto-refresh	Check this box to enable an automatic refresh of the page at regular
	intervals.

4.1.10 Security

4.1.10.1 ACL

Configure the ACL parameters (ACE) of each switch port. These parameters will affect frames received on a port unless the frame matches a specific ACE.

ACL Ports Configuration Refresh Clear Port | Policy ID Action Rate Limiter ID | Port Copy Shutdown Counter Logging Disabled 💌 Permit V Disabled V Disabled 🕶 Disabled ¥ 1 ~ 2 1 ~ Permit Y Disabled × Disabled V Disabled V Disabled > 0 1 ~ Permit Y Disabled > Disabled 💌 Disabled V Disabled Y 0 3 4 1 ~ Permit V Disabled V Disabled V Disabled V Disabled V 0 Permit V 5 Disabled V Disabled > Disabled V Disabled V 0 6 Permit V Disabled V Disabled V Disabled V Disabled V 0 Permit V Disabled 💌 Disabled V Disabled V Disabled V 0 8 1 ~ Permit 💌 Disabled V Disabled V Disabled V Disabled V 0 Permit V Disabled > Disabled V Disabled V Disabled × 0 10 Permit V Disabled V Disabled V Disabled V Disabled V 0

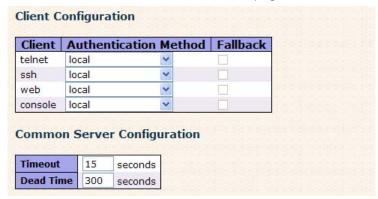

Label	Description
Port	The logical port for the settings contained in the same row.
Policy ID	Select the policy to apply to this port. The allowed values are 1
	through 8. The default value is 1.
Action	Select whether forwarding is permitted ("Permit") or denied ("Deny").
	The default value is "Permit".
Rate Limiter ID	Select which rate limiter to apply to this port. The allowed values are
	Disabled or the values 1 through 15. The default value is "Disabled".
Port Copy	Select which port frames are copied to. The allowed values are
	Disabled or a specific port number. The default value is "Disabled".
Logging	Specify the logging operation of this port. The allowed values are:
	Enabled: Frames received on the port are stored in the System Log.
	Disabled: Frames received on the port are not logged.
	The default value is "Disabled". Please note that the System Log
	memory size and logging rate is limited.

	Specify the port shut down operation of this port. The allowed values
	are:
Shutdown	Enabled: If a frame is received on the port, the port will be disabled.
	Disabled: Port shut down is disabled.
	The default value is "Disabled".
Counter	Counts the number of frames that match this ACE.

4.1.10.2 802.1x

This page allows you to configure how an administrator is authenticated when he logs into the switchstack via TELNET, SSH or the web pages.

Client Configuration

The table has one row for each Client and a number of columns, which are:

Label	Description
Client	The Client for which the configuration below applies.
Authentication	Authentication Method can be set to one of the following values:
Method	none : authentication is disabled and login is not possible.
	local : use the local user database on the switch stack for
	authentication.
	radius : use a remote RADIUS server for authentication.
Fallback	Enable fallback to local authentication by checking this box.
	If none of the configured authentication servers are alive, the local
	user database is used for authentication.
	This is only possible if the Authentication Method is set to
	something else than 'none or 'local'.
Save	Click to save changes.
Reset	Click to undo any changes made locally and revert to previously
	saved values.

Common Server Configuration

These setting are common for all of the Authentication Servers.

Label	Description
Timeout	The Timeout, which can be set to a number between 3 and 3600 seconds, is the maximum time to wait for a reply from a server. If the server does not reply within this timeframe, we will consider it to be dead and continue with the next enabled server (if any). RADIUS servers are using the UDP protocol, which is unreliable by design. In order to cope with lost frames, the timeout interval is divided into 3 subintervals of equal length. If a reply is not received within the subinterval, the request is transmitted again. This algorithm causes the RADIUS server to be queried up to 3 times before it is considered to be dead.
Dead Time	The Dead Time, which can be set to a number between 0 and

3600 seconds, is the period during which the switch will not send
new requests to a server that has failed to respond to a previous
request. This will stop the switch from continually trying to contact
a server that it has already determined as dead.
Setting the Dead Time to a value greater than 0 (zero) will enable
this feature, but only if more than one server has been configured.

RADIUS Authentication Server Configuration

The table has one row for each RADIUS Authentication Server and a number of columns, which are:

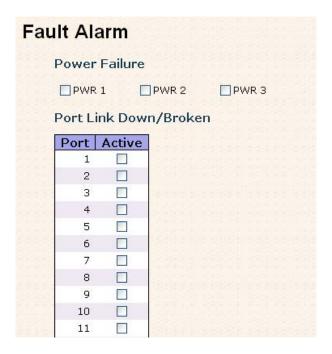

Label	Description
#	The RADIUS Authentication Server number for which the
	configuration below applies.
Enable	Enable the RADIUS Authentication Server by checking this box.
IP Address	Enable fallback to local authentication by checking this box.
	If none of the configured authentication servers are alive, the local
	user database is used for authentication.
	This is only possible if the Authentication Method is set to
	something else than 'none or 'local'.
Port	The UDP port to use on the RADIUS Authentication Server. If the
	port is set to 0 (zero), the default port (1812) is used on the
	RADIUS Authentication Server.
Secret	The secret - up to 29 characters long - shared between the
	RADIUS Accounting Server and the switchstack.

4.1.11 Warning (only for RGS-7244GC-E model)

4.1.11.1 Fault Alarm

When any selected fault event is happened, the Fault LED in switch panel will light up and the electric relay will signal at the same time.

The following table describes the labels in this screen.

Label	Description
Power Failure	Mark the blank of PWR 1 or PWR 2 to monitor.
Port Link Down/Broken	Mark the blank of port 1 to port 8 to monitor.
Apply	Click "Apply" to set the configurations.
Help	Show help file.

4.1.11.2 System Warning

The SYSLOG is a protocol to transmit event notification messages across networks. Please refer to RFC 3164 - The BSD SYSLOG Protocol

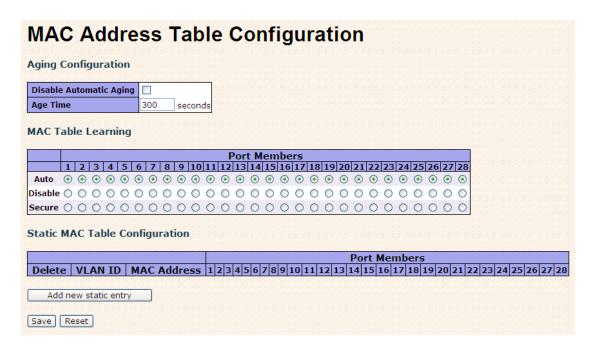

The following table describes the labels in this screen.

Label	Description
IP Address	The remote SYSLOG Server IP address.
Apply	Click "Apply" to set the configurations.
Help	Show help file.

4.1.12 Monitor and Diag

4.1.12.1 MAC Table

The MAC Address Table is configured on this page. Set timeouts for entries in the dynamic MAC Table and configure the static MAC table here.

Aging Configuration

By default, dynamic entries are removed from the MAC after 300 seconds. This removal is also called aging.

Configure aging time by entering a value here in seconds; for example, $\ensuremath{\textbf{Age}}$

time seconds.

The allowed range is 10 to 1000000 seconds.

Disable the automatic aging of dynamic entries by checking Disable automatic aging.

MAC Table Learning

If the learning mode for a given port is grayed out, another module is in control of the mode, so that it cannot be changed by the user. An example of such a module is the MAC-Based Authentication under 802.1X.

Each port can do learning based upon the following settings:

MAC T	abl	le I	ea	rni	ing																							
												F	or	t M	em	be	rs											
	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28
Auto	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
Disable	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
Secure	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0

Label	Description
Auto	Learning is done automatically as soon as a frame with unknown
Auto	SMAC is received.
Disable	No learning is done.
	Only static MAC entries are learned, all other frames are dropped.
	Note: Make sure that the link used for managing the switch is
Secure	added to the Static Mac Table before changing to secure learning
Secure	mode, otherwise the management link is lost and can only be
	restored by using another non-secure port or by connecting to the
	switch via the serial interface.

Static MAC Table Configuration

The static entries in the MAC table are shown in this table. The static MAC table can contain 64 entries

The maximum of 64 entries is for the whole stack, and not per switch.

The MAC table is sorted first by VLAN ID and then by MAC address.

Label	Description
Delete	Check to delete the entry. It will be deleted during the next save.
VLAN ID	The VLAN ID for the entry.
MAC Address	The MAC address for the entry.
Port Members	Checkmarks indicate which ports are members of the entry. Check or uncheck as needed to modify the entry.
Adding a New Static Entry	Click Add new static entry to add a new entry to the static MAC table. Specify the VLAN ID, MAC address, and port members for the new entry. Click "Save".

4.1.12.2 Mirroring

Configure port Mirroring on this page.

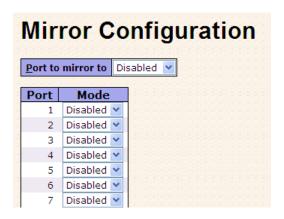

To debug network problems, selected traffic can be copied, or mirrored, to a mirror port where a frame analyzer can be attached to analyze the frame flow.

The traffic to be copied to the mirror port is selected as follows:

All frames received on a given port (also known as ingress or source mirroring).

All frames transmitted on a given port (also known as egress or destination mirroring).

Port to mirror also knwon as the mirror port. Frames from ports that have either source (rx) or destination (tx) mirroring enabled are mirrored to this port. Disabled disables mirroring.

Label	Description
Port	The logical port for the settings contained in the same row.
	Select mirror mode.
	Rx only: Frames received at this port are mirrored to the mirror port.
	Frames transmitted are not mirrored.
	Tx only :Frames transmitted from this port are mirrored to the mirror
	port. Frames received are not mirrored.
	Disabled : Neither frames transmitted nor frames received are
Mode	mirrored.
Wiode	Enabled : Frames received and frames transmitted are mirrored to
	the mirror port.
	Note: For a given port, a frame is only transmitted once. It is
	therefore not possible to mirror Tx frames for the mirror port.
	Because of this, mode for the selected mirror port is limited to
	Disabled or Rx only.

4.1.12.3 System Log Information

The switch system log information is provided here.

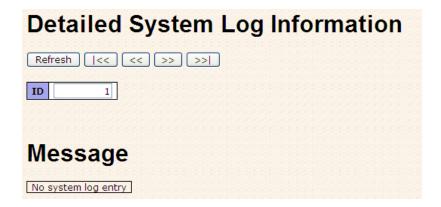

Label	Description
ID	The ID (>= 1) of the system log entry.
Level	The level of the system log entry. The following level types are supported: Info: Information level of the system log. Warning: Warning level of the system log. Error: Error level of the system log. All: All levels.
Time	The time of the system log entry.
Message	The MAC Address of this switch.
Auto-refresh	Check this box to enable an automatic refresh of the page at regular intervals.
Refresh	Updates the system log entries, starting from the current entry ID.
Clear	Flushes all system log entries.
[<<	Updates the system log entries, starting from the first available entry ID.
<<	Updates the system log entries, ending at the last entry currently displayed.
>>	Updates the system log entries, starting from the last entry currently displayed.
>>	Updates the system log entries, ending at the last available entry ID.

4.1.12.4 Detailed Log

The switch system detailed log information is provided here.

Label	Description
ID	The ID (>= 1) of the system log entry.
Message	The detailed messages of the system log entry.
Refresh	Updates the system log entries, starting from the current entry ID.
Clear	Flushes all system log entries.
[ee	Updates the system log entries, starting from the first available entry
	ID.
	Updates the system log entries, ending at the last entry currently
<<	displayed.
	Updates the system log entries, starting from the last entry currently
	displayed.
>>	Updates the system log entries, ending at the last available entry ID.

4.1.12.5 Traffic Overview

This page provides an overview of general traffic statistics for all switch ports.

	Pac	kets	By	tes	Eri	ors	Dr	Filtered	
Port	Receive	Transmit	Receive	Transmit	Receive	Transmit	Receive	Transmit	Receive

28	0	0	0	0	0	0	0	0	(

Label	Description					
Port	The logical port for the settings contained in the same row.					
Packets	The number of received and transmitted packets per port.					
Bytes	The number of received and transmitted bytes per port.					
Erroro	The number of frames received in error and the number of					
Errors	incomplete transmissions per port.					
Drone	The number of frames discarded due to ingress or egress					
Drops	congestion.					
Filtered	The number of received frames filtered by the forwarding process.					
Auto-refresh	Check this box to enable an automatic refresh of the page at regular					
Auto-reliesh 🔲	intervals.					
Refresh	Updates the counters entries, starting from the current entry ID.					
Clear	Flushes all counters entries.					

4.1.12.6 Detailed Statistics

This page provides detailed traffic statistics for a specific switch port. Use the port select box to select which switch port details to display.

The displayed counters are the totals for receive and transmit, the size counters for receive and transmit, and the error counters for receive and transmit.

Detailed Statistics-Receive & Transmit Total

	Port 1 V Auto-refresh Refresh Clear
otal Transmit Total	Receive Total
0 Tx Packets 0	Rx Packets 0
0 Tx Octets	
0 Tx Unicast 0	
0 Tx Multicast 0	Rx Multicast 0
0 Tx Broadcast 0	Rx Broadcast 0
0 Tx Pause 0	Rx Pause 0
ounters Transmit Size Counters	Receive Size Counters
0 Tx 64 Bytes 0	Rx 64 Bytes 0
0 Tx 65-127 Bytes 0	
0 Tx 128-255 Bytes 0	
0 Tx 256-511 Bytes 0	
0 Tx 512-1023 Bytes 0	
0 Tx 1024-1526 Bytes 0	
0 Tx 1527- Bytes 0	
Counters Transmit Queue Counters	Receive Queue Counters
0 Tx Low 0	
0 Tx Normal 0	
0 Tx Medium 0	
0 Tx High 0	
	Receive Error Counters
0 Tx Drops	
0 Tx Late/Exc. Coll. 0	
0	
0	
0 0 0	Rx Jabber 0

Label	Description
Rx and Tx Packets	The number of received and transmitted (good and bad) packets.
Rx and Tx Octets	The number of received and transmitted (good and bad) bytes.
RX and TX Octets	Includes FCS, but excludes framing bits.
Dy and Ty Unionat	The number of received and transmitted (good and bad) unicast
Rx and Tx Unicast	packets.
Rx and Tx	The number of received and transmitted (good and bad) multicast
Multicast	packets.
Rx and Tx	The number of received and transmitted (good and bad) broadcast
Broadcast	packets.
Rx and Tx Pause	A count of the MAC Control frames received or transmitted on this
KX aliu TX Pause	port that have an opcode indicating a PAUSE operation.
By Drone	The number of frames dropped due to lack of receive buffers or
Rx Drops	egress congestion.
Rx	The number of frames received with CRC or alignment errors.
CRC/Alignment	

Rx Undersize	The number of short 1 frames received with valid CRC.
Rx Oversize	The number of long 2 frames received with valid CRC.
Rx Fragments	The number of short 1 frames received with invalid CRC.
Rx Jabber	The number of long 2 frames received with invalid CRC.
Rx Filtered	The number of received frames filtered by the forwarding process.
Tx Drops	The number of frames dropped due to output buffer congestion.
Tx Late / Exc.Coll.	The number of frames dropped due to excessive or late collisions.

Short frames are frames that are smaller than 64 bytes.

Long frames are frames that are longer than the configured maximum frame length for this port.

4.1.12.7 Ping

This page allows you to issue ICMP PING packets to troubleshoot IP connectivity issues.

After you press Start, 5 ICMP packets are transmitted, and the sequence number and roundtrip time are displayed upon reception of a reply. The page refreshes automatically until responses to all packets are received, or until a timeout occurs.

PING6 server ::10.10.132.20

64 bytes from ::10.10.132.20: icmp_seq=0, time=0ms 64 bytes from ::10.10.132.20: icmp_seq=1, time=0ms 64 bytes from ::10.10.132.20: icmp_seq=2, time=0ms 64 bytes from ::10.10.132.20: icmp_seq=3, time=0ms 64 bytes from ::10.10.132.20: icmp_seq=4, time=0ms

Sent 5 packets, received 5 OK, 0 bad

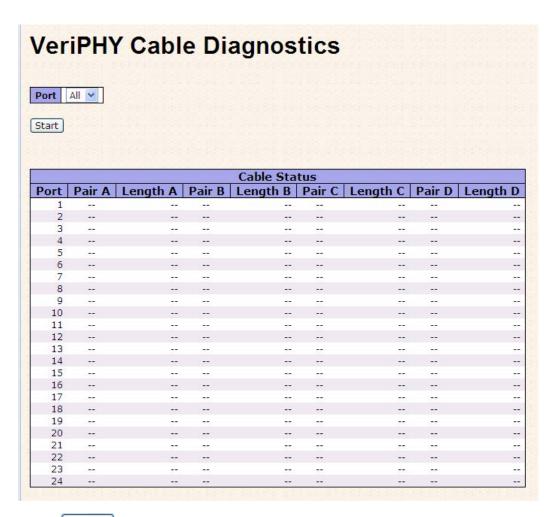

You can configure the following properties of the issued ICMP packets:

Label	Description
IP Address	The destination IP Address.
Ping Size	The payload size of the ICMP packet. Values range from 8 bytes
	to 1400 bytes.

4.1.12.8 VeriPHY

This page is used for running the VeriPHY Cable Diagnostics.

Press Start to run the diagnostics. This will take approximately 5 seconds. If all ports are selected, this can take approximately 15 seconds. When completed, the page refreshes automatically, and you can view the cable diagnostics results in the cable status table. Note that VeriPHY is only accurate for cables of length 7 - 140 meters.

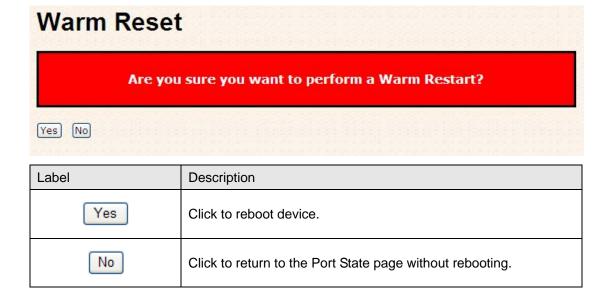

10 and 100 Mbps ports will be linked down while running VeriPHY. Therefore, running VeriPHY on a 10 or 100 Mbps management port will cause the switch to stop responding until VeriPHY is complete.

Label	Description
Port	The port where you are requesting VeriPHY Cable Diagnostics.
Cable Status	Port: Port number.
	Pair: The status of the cable pair.
	Length: The length (in meters) of the cable pair.

4.1.13 System Reboot

You can reset the stack switch on this page. After reset, the system will boot normally as if you had powered-on the devices.

4.1.14 Factory Defaults

You can reset the configuration of the stack switch on this page. Only the IP configuration is retained.

Factory Defaults

Are you sure you want to reset the configuration to Factory Defaults?

Label	Description
Yes	Click to reset the configuration to Factory Defaults.
No	Click to return to the Port State page without resetting the configuration

Command Line Interface Management

5.1 About CLI Management

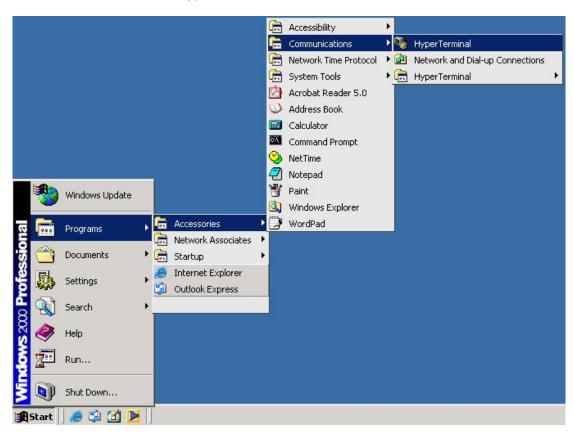

Besides WEB-base management, RGS-7244GP(-E) also support CLI management. You can use console or telnet to management switch by CLI.

CLI Management by RS-232 Serial Console (115200, 8, none, 1, none)

Before Configuring by RS-232 serial console, use an DB9-M to DB9-F cable to connect the Switches' RS-232 Console port to your PC's COM port.

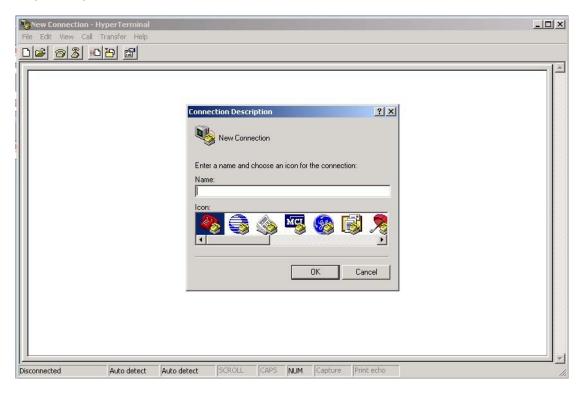

Follow the steps below to access the console via RS-232 serial cable.

<u>Step 1</u> From the Windows desktop, click on Start -> Programs -> Accessories -> Communications -> Hyper Terminal

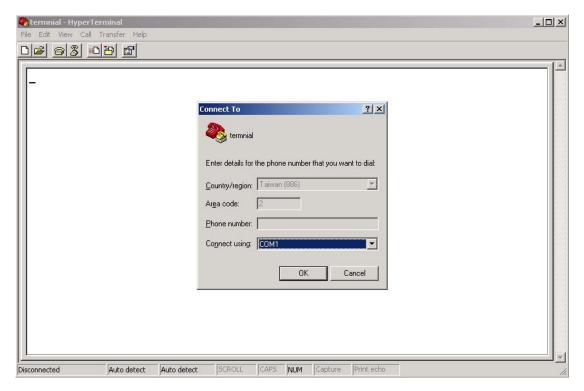

Step 2 Input a name for new connection

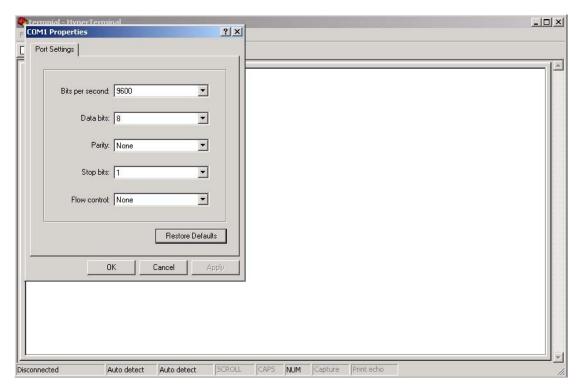

Step 3 Select to use COM port number

<u>Step 4</u> The COM port properties setting, 115200 for Bits per second, 8 for Data bits, None for Parity, 1 for Stop bits and none for Flow control.

<u>Step 5</u> The Console login screen will appear. Use the keyboard to enter the Username and Password (The same with the password for Web Browser), then press "**Enter**".

RGS-7244GP-E Command Line Interface

Username : _

 ${\sf Password} \; : \;$

CLI Management by Telnet

Users can use "TELNET" to configure the switches.

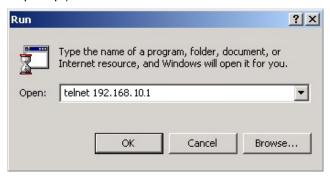

The default values are as below:

IP Address: **192.168.10.1**Subnet Mask: **255.255.255.0**Default Gateway: **192.168.10.254**

User Name: **root** Password: **root**

Follow the steps below to access the console via Telnet.

Step 1 Telnet to the IP address of the switch from the Windows "Run" command (or from the MS-DOS prompt) as below.

Step 2 The Login screen will appear. Use the keyboard to enter the Username and Password (The same with the password for Web Browser), and then press "Enter"

RGS-7244GP-E

Technical Specifications

ORing Switch Model	RGS-7244GP	RGS-7244GP-E	
Physical Ports			
10/100/1000 Base-T(X) Ports in RJ45 Auto MDI/MDIX	24		
1000Base-X SFP Port		4	
Tachnology			
Technology	IEEE 802.3 for 10Base-T		
Ethernet Standards	IEEE 802.3u for 100Base-TX IEEE 802.3ab for 1000Base-T IEEE 802.z for 1000Base-X IEEE 802.3x for Flow control IEEE 802.3ad for LACP (Link Aggregation Control Pro IEEE 802.1p for COS (Class of Service) IEEE 802.1Q for VLAN Tagging	tocol)	
	IEEE 802.1D for STP (Spanning Tree Protocol) IEEE 802.1w for RSTP (Rapid Spanning Tree Protocol IEEE 802.1s for MSTP (Multiple Spanning Tree Protoc IEEE 802.1x for Authentication IEEE 802.1AB for LLDP (Link Layer Discovery Protoco	ol)	
MAC Table	8K		
Priority Queues	4		
Processing	Store-and-Forward		
Switch Properties	Switching latency: 7 us Switching bandwidth: 56Gbps Max. Number of Available VLANs: 256 IGMP multicast groups: 128 for each VLAN Port rate limiting: User Define		
Jumbo frame	Up to 9K Bytes		
Security Features	IP Police security feature Enable/disable ports, MAC based port security Port based network access control (802.1x) VLAN (802.1Q) to segregate and secure network tra Radius centralized password management SNMPv3 encrypted authentication and access security		
Software Features	STP/RSTP/MSTP (IEEE 802.1D/w/s) Redundant Ring (O-Ring) with recovery time less that TOS/Diffserv supported Quality of Service (802.1p) for real-time traffic VLAN (802.1Q) with VLAN tagging and GVRP support IGMP Snooping IP-based bandwidth management Application-based QoS management DOS/DDOS auto prevention Port configuration, status, statistics, monitoring, secundary.	red	
O-Ring STP RSTP MSTP			
RS-232 Serial Console Port RS-232 in DB9 connector with console cable. 115200bps, 8, N, 1			
LED Indicators			
Power Indicator (PWR)	Green: Power indicator For AC	Green: Power indicator For AC and DC	
Power-1 Indicator (PW1)	N/A	Green : Indicate Power-1 input	
Power-2 Indicator (PW2)	N/A	Green : Indicate Power-2 input	
Power-3 Indicator (PW3)	N/A	Green : Indicate Power-3 input	

System Ready Indicator (STA)	Green: Indicate that the system is ready. The LED	is blinking when the system is upgrading firmware	
Ring Master Indicator (R.M.)	Green: Indicate that the system is operating in O-Ring Master mode		
O-Ring Indicator (Ring)	Green: Indicate system operated in O-Ring mode Blinking to indicate Ring is broken.		
Fault Indicator (Fault)	N/A	Amber : Indicate unexpected event occurred	
Sysem Runnig Indicator (RUN)	Green : System operated continuously	·	
Supervisor Login Indicator (RMT)			
Reset To Default Running Indicator	Green: System is accessed remotely		
(DEF)	Green: System reset to default configuration		
Ping Command To The Switch Indicator (Ping)	Green: System is processing "PING" request		
10/100/1000Base-T(X) RJ45 Port	Left Green for 1000Mbps Link/Act indicator. Amber for 10/100Mbps Link/Act indicator		
Indicator	Right Amber for full-duplex indicator		
100/1000Base-X SFP Port Indicator	Green for port Link/Act.		
Fault contact			
Relay	N/A	Relay output to carry capacity of 1A at 24VDC	
Power			
Input Power	100 ~ 240VAC with power cord	100~240VAC with power cord, dual 36 ~ 72VDC power inputs at 6-pin terminal block	
Power Consumption (Typ.)	36 Watts	36 Watts	
Overload Current Protection	Present		
Physical Characteristic			
Enclosure	19 inches rack mountable		
Dimension (W x D x H)	443.7 (W) x 200 (D) x 44 (H) mm	431 (W) x 342 (D) x 44 (H) mm	
Weight (g)	2700g	4250g	
Environmental			
Storage Temperature	-40 to 85°C (-40 to 185°F)		
Operating Temperature	-40 to 70°C (-40 to 158°F)		
Operating Humidity	5% to 95% Non-condensing		
Regulatory approvals			
EMI	FCC Part 15, CISPR (EN55022) class A		
	EN61000-4-2 (ESD)		
	EN61000-4-3 (RS),		
F146	EN61000-4-4 (EFT),		
EMS	EN61000-4-5 (Surge), EN61000-4-6 (CS),		
	EN61000-4-8 (CS), EN61000-4-8,		
	EN61000-4-11		
Shock	IEC60068-2-27		
Free Fall	IEC60068-2-32		
Vibration	IEC60068-2-6		
Warranty	5 years
