## 4.1 Anti-static Precautions

### WARNING:

Failure to take ESD precautions during installation may result in permanent damage to the product and severe injury to the user.

Electrostatic discharge (ESD) can cause serious damage to electronic components, including the WAFER-PV-D5252/D4252/N4552. Dry climates are especially susceptible to ESD. It is therefore critical to strictly adhere to the following anti-static precautions whenever the WAFER-PV-D5252/D4252/N4552, or any other electrical component, is handled.

- ***Wear an anti-static wristband:*** - Wearing a simple anti-static wristband can help to prevent ESD from damaging the board.
- ***Self-grounding:*** - Before handling the board touch any grounded conducting material. During the time the board is handled, frequently touch any conducting materials that are connected to the ground.
- ***Use an anti-static pad:*** When configuring the WAFER-PV-D5252/D4252/N4552, place it on an anti-static pad. This reduces the possibility of ESD damaging the WAFER-PV-D5252/D4252/N4552.
- ***Only handle the edges of the PCB:*** - When handling the PCB, hold it by the edges.

## 4.2 Installation Considerations

### NOTE:

The following installation notices and installation considerations should be read and understood before the WAFER-PV-D5252/D4252/N4552 is installed. All installation notices pertaining to the installation of WAFER-PV-D5252/D4252/N4552 should be strictly adhered to. Failing to adhere to these precautions may lead to severe damage of the WAFER-PV-D5252/D4252/N4552 and injury to the person installing the motherboard.

### WARNING:

The installation instructions described in this manual should be carefully followed in order to prevent damage to the WAFER-PV-D5252/D4252/N4552, WAFER-PV-D5252/D4252/N4552 components and injury to the user.

Before and during the installation please **DO** the following:

- **Read the user manual:**
  - The user manual provides a complete description of the installation instructions and configuration options.
- **Wear an electrostatic discharge cuff (ESD):**
  - Electronic components are easily damaged by ESD. Wearing an ESD cuff removes ESD from the body and helps prevent ESD damage.
- **Place on an antistatic pad:**
  - When installing or configuring the motherboard, place it on an antistatic pad. This helps to prevent potential ESD damage.
- **Turn all power off:**
  - Make sure the product is disconnected from all power supplies and that no electricity is being fed into the system.

Before and during the installation of the WAFER-PV-D5252/D4252/N4552 **DO NOT**:

- **DO NOT** remove any of the stickers on the PCB board. These stickers are required for warranty validation.
- **DO NOT** use the product before verifying all the cables and power connectors are properly connected.
- **DO NOT** allow screws to come in contact with the PCB circuit, connector pins, or its components.

### 4.3 SO-DIMM Installation

To install an SO-DIMM, please follow the steps below and refer to Figure 4-1.

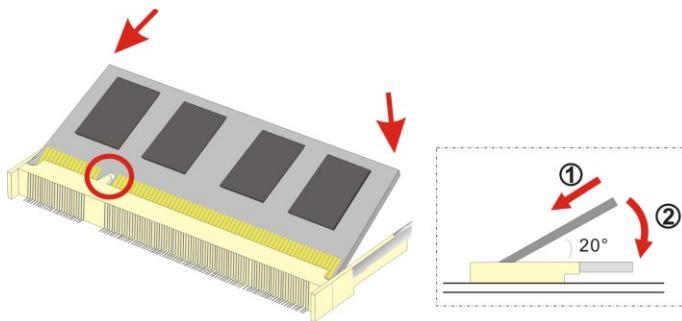

Figure 4-1: SO-DIMM Installation

**Step 1: Locate the SO-DIMM socket.** Place the board on an anti-static mat.

**Step 2: Align the SO-DIMM with the socket.** Align the notch on the memory with the notch on the memory socket.

**Step 3: Insert the SO-DIMM.** Push the memory in at a 20° angle. (See Figure 4-1)

**Step 4: Seat the SO-DIMM.** Gently push downwards and the arms clip into place. (See Figure 4-1)

## 4.4 CompactFlash® Installation

### NOTE:

Both CompactFlash® Type I and Type II cards are supported.

To install the CompactFlash® card, please follow the steps below.

**Step 1: Locate the CF card socket.** Locate the CompactFlash® slot.

**Step 2: Align the CF card.** Align the CompactFlash® card. The label side should be facing away from the board. The grooves on the CompactFlash® slot ensure that the card cannot be inserted the wrong way.

**Step 3: Insert the CF card.** Push until the CompactFlash® card is firmly seated in the slot. See Figure 4-2.

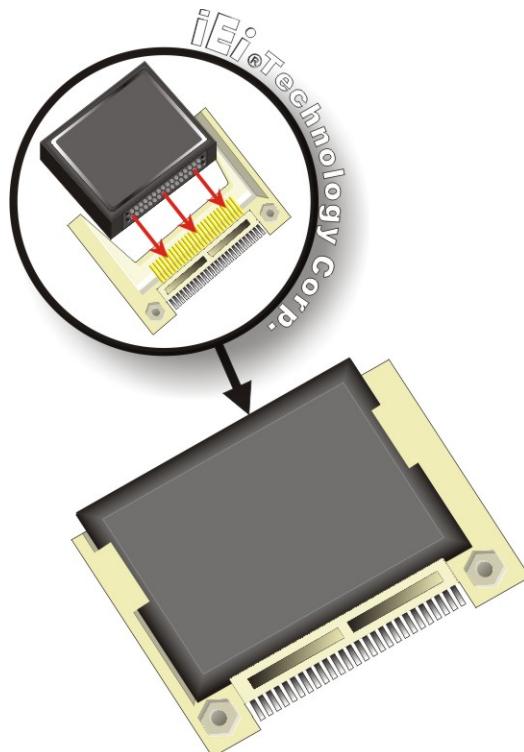

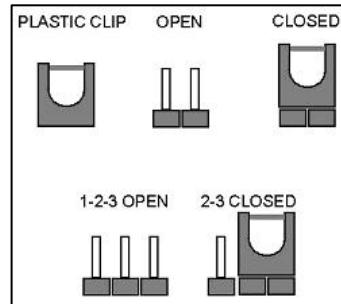

Figure 4-2: CompactFlash® Card Installation

## 4.5 Jumper Settings

### NOTE:

A jumper is a metal bridge that is used to close an electrical circuit. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To CLOSE/SHORT a jumper means connecting the pins of the jumper with the plastic clip and to OPEN a jumper means removing the plastic clip from a jumper.

Before the WAFER-PV-D5252/D4252/N4552 is installed in the system, the jumpers must be set in accordance with the desired configuration. The jumpers on the WAFER-PV-D5252/D4252/N4552 are listed in Table 4-1.

Description	Label	Type
AT/ATX mode selection	J_AUTOPWR1	3-pin header

## 4.6 Chassis Installation

### 4.6.1 Airflow

#### WARNING:

Airflow is critical for keeping components within recommended operating temperatures. The chassis should have fans and vents as necessary to keep things cool.

The WAFER-PV-D5252/D4252/N4552 must be installed in a chassis with ventilation holes on the sides allowing airflow to travel through the heat sink surface. In a system with an individual power supply unit, the cooling fan of a power supply can also help generate airflow through the board surface.

# Digital I/O Interface

---

## C.1 Introduction

The DIO connector on the WAFER-PV-D5252/D4252/N4552 is interfaced to GPIO ports on the Super I/O chipset. The DIO has both 4-bit digital inputs and 4-bit digital outputs. The digital inputs and digital outputs are generally control signals that control the on/off circuit of external devices or TTL devices. Data can be read or written to the selected address to enable the DIO functions.

### NOTE:

For further information, please refer to the datasheet for the Super I/O chipset.

The BIOS interrupt call **INT 15H** controls the digital I/O.

#### INT 15H:

AH – 6FH
<u>Sub-function:</u>
<b>AL – 8</b> : Set the digital port as INPUT
<b>AL</b> : Digital I/O input value

## C.2 Assembly Language Sample 1

```
MOV      AX, 6F08H      ;setting the digital port as input  
INT      15H           ;
```

AL low byte = value

**AH – 6FH**

Sub-function:

**AL – 9** : Set the digital port as OUTPUT  
**BL** : Digital I/O input value

## C.3 Assembly Language Sample 2

```
MOV      AX, 6F09H      ;setting the digital port as output  
MOV      BL, 09H         ;digital value is 09H  
INT      15H           ;
```

Digital Output is 1001b

## D.1 Hazardous Materials Disclosure Table for IPB Products Certified as RoHS Compliant Under 2002/95/EC Without Mercury

The details provided in this appendix are to ensure that the product is compliant with the Peoples Republic of China (China) RoHS standards. The table below acknowledges the presences of small quantities of certain materials in the product, and is applicable to China RoHS only.

A label will be placed on each product to indicate the estimated "Environmentally Friendly Use Period" (EFUP). This is an estimate of the number of years that these substances would "not leak out or undergo abrupt change." This product may contain replaceable sub-assemblies/components which have a shorter EFUP such as batteries and lamps. These components will be separately marked.

Please refer to the table on the next page.
