QNAP Security Advisory | Bulletin ID: NAS-201705-27

Taipei, Taiwan, May 27, 2017 - QNAP® had published security enhancement against security vulnerabilities that could affect specific versions of QNAP products. Please use the following information and solutions to correct the security issues and vulnerabilities.

Security Advisory for Samba Writable Share Vulnerability

Release date: May 27, 2017

Last updated: May 27, 2017

Bulletin ID: NAS-201705-27

Severity rating: High

CVE identifier: CVE-2017-7494

Affected products: All NAS running QTS

Summary

The Samba team has released an advisory for CVE-2017-7494, a vulnerability that may allow users with write access to upload a shared library to a writeable shared folder and then execute malicious code.

Solution

QNAP is currently working on a fix and will release an update in the coming days. For manually applying a workaround, refer to QNAP Forum (

<https://forum.qnap.com/viewtopic.php?f=5&t=132991&p=617561#p617561>)
