4.1 Anti-static Precautions

WARNING:

Failure to take ESD precautions during the installation of the WSB-BT may result in permanent damage to the WSB-BT and severe injury to the user.

Electrostatic discharge (ESD) can cause serious damage to electronic components, including the WSB-BT. Dry climates are especially susceptible to ESD. It is therefore critical that whenever the WSB-BT or any other electrical component is handled, the following anti-static precautions are strictly adhered to.

- ***Wear an anti-static wristband:*** - Wearing a simple anti-static wristband can help to prevent ESD from damaging the board.
- ***Self-grounding:***- Before handling the board touch any grounded conducting material. During the time the board is handled, frequently touch any conducting materials that are connected to the ground.
- ***Use an anti-static pad:*** When configuring the WSB-BT, place it on an anti-static pad. This reduces the possibility of ESD damaging the WSB-BT.
- ***Only handle the edges of the PCB:-*** When handling the PCB, hold the PCB by the edges.

4.2 Installation Considerations

NOTE:

The following installation notices and installation considerations should be read and understood before installation. All installation notices must be strictly adhered to. Failing to adhere to these precautions may lead to severe damage and injury to the person performing the installation.

**WARNING:**

The installation instructions described in this manual should be carefully followed in order to prevent damage to the components and injury to the user.

Before and during the installation please **DO** the following:

- Read the user manual:
 - The user manual provides a complete description of the WSB-BT installation instructions and configuration options.
- Wear an electrostatic discharge cuff (ESD):
 - Electronic components are easily damaged by ESD. Wearing an ESD cuff removes ESD from the body and helps prevent ESD damage.
- Place the WSB-BT on an anti-static pad:
 - When installing or configuring the motherboard, place it on an anti-static pad. This helps to prevent potential ESD damage.
- Turn all power to the WSB-BT off:
 - When working with the WSB-BT, make sure that it is disconnected from all power supplies and that no electricity is being fed into the system.

Before and during the installation of the WSB-BT, **DO NOT:**

- Remove any of the stickers on the PCB board. These stickers are required for warranty validation.
- Use the product before verifying all the cables and power connectors are properly connected.

Digital I/O Interface

WSB-BT CPU Card

D.1 Introduction

The DIO connector on the WSB-BT is interfaced to GPIO ports on the Super I/O chipset. The digital inputs and digital outputs are generally control signals that control the on/off circuit of external devices or TTL devices. Data can be read or written to the selected address to enable the DIO functions.

**NOTE:**

For further information, please refer to the datasheet for the Super I/O chipset.

The BIOS interrupt call **INT 15H** controls the digital I/O.

INT 15H:

AH – 6FH
<u>Sub-function:</u>
AL – 8 : Set the digital port as INPUT
AL : Digital I/O input value

D.2 Assembly Language Sample 1

```
MOV    AX, 6F08H    ; setting the digital port as input
INT     15H          ;
```

AL low byte = value

AH – 6FH	
<u>Sub-function:</u>	
AL – 9	: Set the digital port as OUTPUT
BL	: Digital I/O input value

D.3 Assembly Language Sample 2

```
MOV    AX, 6F09H    ; setting the digital port as output
MOV    BL, 09H       ; digital value is 09H
INT     15H          ;
```

Digital Output is 1001b

E

Watchdog Timer

NOTE:

The following discussion applies to DOS environment. Contact IEI support or visit the IEI website for specific drivers for other operating systems.

The Watchdog Timer is provided to ensure that standalone systems can always recover from catastrophic conditions that cause the CPU to crash. This condition may have occurred by external EMIs or a software bug. When the CPU stops working correctly, Watchdog Timer either performs a hardware reset (cold boot) or a Non-Maskable Interrupt (NMI) to bring the system back to a known state.

A BIOS function call (INT 15H) is used to control the Watchdog Timer.

INT 15H:

AH – 6FH Sub-function:	
AL – 2:	Sets the Watchdog Timer's period.
BL:	Time-out value (Its unit-second is dependent on the item “Watchdog Timer unit select” in CMOS setup).

Table E-1: AH-6FH Sub-function

Call sub-function 2 to set the time-out period of Watchdog Timer first. If the time-out value is not zero, the Watchdog Timer starts counting down. When the timer value reaches zero, the system resets. To ensure that this reset condition does not occur, calling sub-function 2 must periodically refresh the Watchdog Timer. However, the watchdog timer is disabled if the time-out value is set to zero.

A tolerance of at least 10% must be maintained to avoid unknown routines within the operating system (DOS), such as disk I/O that can be very time-consuming.

WSB-BT CPU Card

**NOTE:**

When exiting a program it is necessary to disable the Watchdog Timer, otherwise the system resets.
