## REGULATORY COMPLIANCE STATEMENT

Product(s) associated with this publication complies/comply with all applicable regulations.

Please refer to the Technical Specifications section for more details.

## WARRANTY

ORing warrants that all ORing products are free from defects in material and workmanship for a specified warranty period from the invoice date (5 years for most products). ORing will repair or replace products found by ORing to be defective within this warranty period, with shipment expenses apportioned by ORing and the distributor. This warranty does not cover product modifications or repairs done by persons other than ORing-approved personnel, and this warranty does not apply to ORing products that are misused, abused, improperly installed, or damaged by accidents.

Please refer to the Technical Specifications section for the actual warranty period(s) of the product(s) associated with this publication.

## DISCLAIMER

Information in this publication is intended to be accurate. ORing shall not be responsible for its use or infringements on third-parties as a result of its use. There may occasionally be unintentional errors on this publication. ORing reserves the right to revise the contents of this publication without notice.

# **Getting to Know Your Switch**

## **1.1 About the IGPS-9084GP-LA Industrial Switch**

IGPS-9084GP-LA is layer2 managed PoE Ethernet switch with 8x10/100/1000Base-T(X) P.S.E. ports and 4x100/1000Base-X SFP ports. The switch support Ethernet Redundancy protocol, O-Ring (recovery time < 20ms over 250 units of connection) and MSTP (RSTP/STP compatible) can protect your mission-critical applications from network interruptions or temporary malfunctions with its fast recovery technology. IGPS-9084GP-LA also support Power over Ethernet, a system to transmit electrical power up to 30 watts, total PoE power budget is 240W max, along with data, to remote devices over standard twisted-pair cable in an Ethernet network. IGPS-9084GP-LA switch has 8x10/100/1000Base-T(X) P.S.E. (Power Sourcing Equipment) ports. P.S.E. is a device (switch or hub for instance) that will provide power in a PoE connection. And support wide operating temperature from -40 oC to 75 oC. IGPS-9084GP-LA can also be managed centralized and convenient by Open-Vision, Except the Web-based interface, Telnet and console (CLI) configuration.

## **1.2 Software Features**

- Support O-Ring (recovery time < 30ms over 250 units of connection) and MSTP(RSTP/STP compatible) for Ethernet Redundancy
- Open-Ring support the other vendor's ring technology in open architecture
- O-Chain allow multiple redundant network rings
- Support standard IEC 62439-2 MRP\*NOTE (Media Redundancy Protocol) function
- 8 port P.S.E. fully compliant with IEEE802.3at POE+ provide up to 30 Watts per port
- Support PoE scheduled configuration and PoE auto-ping check function
- Support IEEE 1588v2 clock synchronization
- Support IPV6 new internet protocol version
- Support EtherNet/IP and Modbus TCP protocol
- Support IEEE 802.3az Energy-Efficient Ethernet technology
- Provided HTTPS/SSH protocol to enhance network security
- Support SMTP client
- Support IP-based bandwidth management
- Support application-based QoS management
- Support Device Binding security function
- Support DOS/DDOS auto prevention
- IGMP v2/v3 (IGMP snooping support) for filtering multicast traffic

- Support SNMP v1/v2c/v3 & RMON & 802.1Q VLAN Network Management
- Support ACL, TACACS+ and 802.1x User Authentication for security
- Supports 9.6K Bytes Jumbo Frame
- Support DBU-01 backup unit device to quickly backup/restore configuration
- Multiple notification for warning of unexpected event
- Web-based ,Telnet, Console (CLI), and Windows utility (Open-Vision) configuration
- Robust EMS design, provide 8K ESD and 4KV Surge protection
- Support LLDP Protocol
- Rigid IP-30 housing design
- DIN-Rail and wall mounting enabled

## 1.3 Hardware Features

- Redundant DC power inputs
- Operating Temperature: -40 to 75°C
- Storage Temperature: -40 to 85°C
- Operating Humidity: 5% to 95%, non-condensing
- Casing: IP-30
- 8x 10/100/1000Base-T(X) P.S.E.
- 4 x 100/1000Base-X SFP
- Console Port
- Dimensions 54.3 (W) x 108.3 (D) x 145.1 (H) mm (2.13 x 4.26 x 5.71 inches)

# Hardware Installation

## 2.1 Installing Switch on DIN-Rail

Each switch has a DIN-Rail kit on rear panel. The DIN-Rail kit helps switch to fix on the DIN-Rail. It is easy to install the switch on the DIN-Rail:

### 2.1.1 Mount IGPS-9084GP-LA on DIN-Rail

DIN-Rail Size

## 2.2 Wall Mounting Installation

Each switch has another installation method for users to fix the switch. A wall mount panel can be found in the package. The following steps show how to mount the switch on the wall:

Wall-Mounting size

# Hardware Overview

## 3.1 Front Panel

The following table describes the labels that stick on the IGPS-9084GP-LA series.

Port	Description
<b>SFP ports</b>	4 100 /1000Base-X
<b>Copper Port</b>	8 10/100/1000Base-T(X) P.S.E.
<b>Console</b>	Use RS-232 with RJ-45 connector to manage switch.

1. System LED.

LED for PWR. When the PWR UP, the green led will be light on

LED for PWR1

LED for PWR2

LED for R.M (Ring master). When the LED light on, it means that the switch is the ring master of Ring. LED for Ring. When the led light on, it means the Ring is activated.

LED for Ring. When the led light on, it means the O-Ring is activated.

LED for Fault. When the light on, it means Power failure or Port down/fail.

2. LED for P.O.E Status.
3. Push the button 3 seconds for reset; 5 seconds for factory default.
4. LED for Ethernet ports LINK/ACK
5. LED for Ethernet ports SPEED
6. 10/100/1000Base-T(X) ports
7. 100/1000Base-X SFP
8. LED for SFP ports link status.
9. Console port (RJ-45)

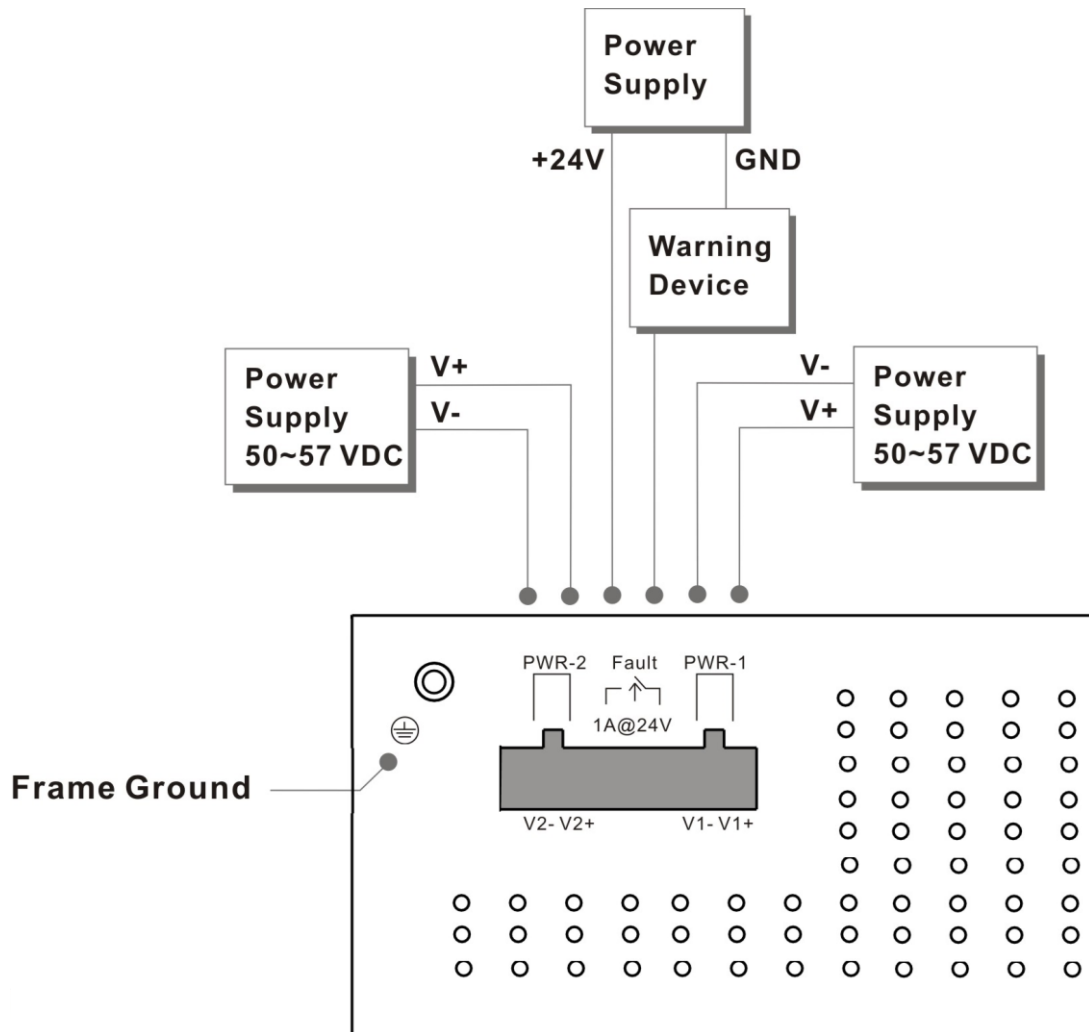

## 3.2 Front Panel LEDs

LED	Color	Status	Description
<b>PWR</b>	Green	On	DC power module up
<b>PW1</b>	Green	On	DC power module 1activated.
<b>PW2</b>	Green	On	DC Power module 2activated.
<b>R.M</b>	Green	On	Ring Master.
<b>Ring</b>	Green	On	Ring enabled.
		Slowly blinking	Ring has only One link. (lack of one link to build the ring.)
		Fast blinking	Ring work normally.
<b>Fault</b>	Amber	On	Fault relay. Power failure or Port down/fail.
Gigabit Ethernet ports			
<b>SPEED (Dual color)</b>	Green	On	Port link up on 1000Mbps
			Data transmitted on 1000Mbps
	Amber	On	Port link up on 10/100Mbps
			Data transmitted on 10/100Mbps
<b>LINK/ACK</b>	Green	Blinking	Port LINK/ACK
SFP ports			
<b>LNK/LNK</b>	Green	On	Port link up.
		Blinking	Data transmitted.

### 3.3 Top view Panel

The bottom panel components of IGPS-9084GP-LA Series are showed as below:

1. Terminal block includes: PWR1, PWR2 (50-57V DC)
2. Ground wire

# Cables

## 4.1 Ethernet Cables

The IGPS-9084GP-LA switch had standard Ethernet ports. According to the link type, the switches use CAT 3, 4, 5,5e UTP cables to connect to any other network device (PCs, servers, switches, routers, or hubs). Please refer to the following table for cable specifications.

Cable Types and Specifications

Cable	Type	Max. Length	Connector
10BASE-T	Cat. 3, 4, 5 100-ohm	UTP 100 m (328 ft)	RJ-45
100BASE-TX	Cat. 5 100-ohm UTP	UTP 100 m (328 ft)	RJ-45
1000BASE-TX	Cat. 5/Cat. 5e 100-ohm UTP	UTP 100 m (328ft)	RJ-45

### 4.1.1 1000/100BASE-TX/10BASE-T Pin Assignments

With 1000/100BASE-TX/10BASE-T cable, pins 1 and 2 are used for transmitting data, and pins 3 and 6 are used for receiving data.

10/100Base-T(X) P.S.E. RJ-45 port

Pin Number	Assignment
#1	TD+ with PoE Power input +
#2	TD- with PoE Power input +
#3	RD+ with PoE Power input -
#6	RD- with PoE Power input -

10/100 Base-T RJ-45 Pin Assignments

Pin Number	Assignment
1	TD+
2	TD-
3	RD+
4	Not used
5	Not used
6	RD-
7	Not used
8	Not used

## 1000Base-T P.S.E. RJ-45 port

Pin Number	Assignment
#1	BI_DA+ with PoE Power input +
#2	BI_DA- with PoE Power input +
#3	BI_DB+ with PoE Power input -
#4	BI_DC+
#5	BI_DC-
#6	BI_DB- with PoE Power input -
#7	BI_DD+
#8	BI_DD-

## 1000 Base-T RJ-45 Pin Assignments

Pin Number	Assignment
1	BI_DA+
2	BI_DA-
3	BI_DB+
4	BI_DC+
5	BI_DC-
6	BI_DB-
7	BI_DD+
8	BI_DD-

The IGPS-9084GP-LA Series switches support auto MDI/MDI-X operation. You can use a straight-through cable to connect PC to switch. The following table below shows the 10BASE-T/ 100BASE-TX MDI and MDI-X port pin outs.

## 10/100 Base-T MDI/MDI-X pins assignment

Pin Number	MDI port	MDI-X port
1	TD+(transmit)	RD+(receive)
2	TD-(transmit)	RD-(receive)
3	RD+(receive)	TD+(transmit)
4	Not used	Not used
5	Not used	Not used
6	RD-(receive)	TD-(transmit)
7	Not used	Not used

8	Not used	Not used
---	----------	----------

1000 Base-T MDI/MDI-X pins assignment

Pin Number	MDI port	MDI-X port
1	BI_DA+	BI_DB+
2	BI_DA-	BI_DB-
3	BI_DB+	BI_DA+
4	BI_DC+	BI_DD+
5	BI_DC-	BI_DD-
6	BI_DB-	BI_DA-
7	BI_DD+	BI_DC+
8	BI_DD-	BI_DC-

**Note:** "+" and "-" signs represent the polarity of the wires that make up each wire pair.

## 4.2 SFP

The Switch has fiber optical ports with SFP connectors. The fiber optical ports are in multi-mode (0 to 550M, 850 nm with 50/125 μm, 62.5/125 μm fiber) and single-mode with LC connector. Please remember that the TX port of Switch A should be connected to the RX port of Switch B.

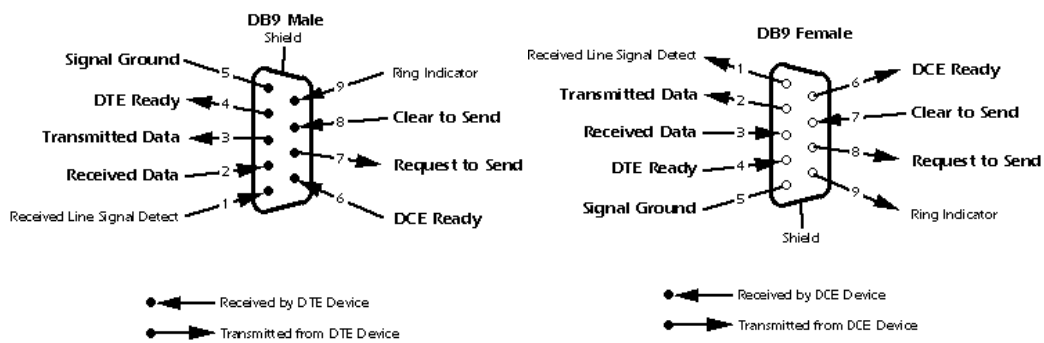

### 4.3 Console Cable

IGPS-9084GP-LA switch can be management by console port. The DB-9 to RJ-45 cable can be found in the package. You can connect them to PC via a RS-232 cable with DB-9 female connector and the other end (RJ-45 connector) connects to console port of switch.

PC pin out (male) assignment	RS-232 with DB9 female connector	DB9 to RJ 45
Pin #2 RD	Pin #2 TD	Pin #2
Pin #3 TD	Pin #3 RD	Pin #3
Pin #5 GD	Pin #5 GD	Pin #5

# WEB Management

## 5.1 Configuration by Web Browser

This section introduces the configuration by Web browser.

### 5.1.1 About Web-based Management

An embedded HTML web site resides in flash memory on the CPU board. It contains advanced management features and allows you to manage the switch from anywhere on the network through a standard web browser such as Microsoft Internet Explorer.

The Web-Based Management function supports Internet Explorer 5.0 or later. It is based on Java Applets with an aim to reduce network bandwidth consumption, enhance access speed and present an easy viewing screen.

**Note:** By default, IE5.0 or later version does not allow Java Applets to open sockets. You need to explicitly modify the browser setting in order to enable Java Applets to use network ports.

### Preparing for Web Management

The default value is as below:

IP Address: **192.168.10.1**

Subnet Mask: **255.255.255.0**

Default Gateway: **192.168.10.254**

User Name: **admin**

Password: **admin**

### System Login

1. Launch the Internet Explorer.
2. Type http:// and the IP address of the switch. Press "**Enter**".

3. The login screen appears.
4. Key in the username and password. The default username and password is "admin".
5. Click "Enter" or "OK" button, then the main interface of the Web-based management appears.

Login screen

**Main Interface**

## 5.1.2 Basic Setting

### 5.1.2.1 System Information

The switch system information is provided here.

#### System Information Configuration

<b>System Name</b>	<input type="text" value="IGPS-9084GP-LA"/>
<b>System Description</b>	<input type="text" value="Industrial Slim 12-port managed Gigabit PoE Ethernet switch with 8x10/10G"/>
<b>System Location</b>	<input type="text"/>
<b>System Contact</b>	<input type="text"/>

System Information interface

Label	Description
<b>System Name</b>	An administratively assigned name for this managed node. By convention, this is the node's fully-qualified domain name. A domain name is a text string drawn from the alphabet (A-Z, a-z), digits (0-9), minus sign (-). No space characters are permitted as part of a name. The first character must be an alpha character. And the first or last character must not be a minus sign. The allowed string length is 0 to 255.
<b>System Description</b>	The device Description.
<b>System Location</b>	The physical location of this node(e.g., telephone closet, 3rd floor). The allowed string length is 0 to 255, and the allowed content is the ASCII characters from 32 to 126.
<b>System Contact</b>	The textual identification of the contact person for this managed node, together with information on how to contact this person. The allowed string length is 0 to 255, and the allowed content is the ASCII characters from 32 to 126.
<input type="button" value="Save"/>	Click to save changes.
<input type="button" value="Reset"/>	Click to undo any changes made locally and revert to previously saved values.

### 5.1.2.2 Admin&Password

This page allows you to configure the system password required to access the web pages or log in from CLI.

#### System Password

<b>Username</b>	admin
<b>Old Password</b>	<input type="text"/>
<b>New Password</b>	<input type="text"/>
<b>Confirm New Password</b>	<input type="text"/>

Label	Description
<b>Old Password</b>	Enter the current system password. If this is incorrect, the new password will not be set.
<b>New Password</b>	The system password. The allowed string length is 0 to 31, and the allowed content is the ASCII characters from 32 to 126.
<b>Confirm password</b>	Re-type the new password.
<input type="button" value="Save"/>	Click to save changes.

### 5.1.2.3 Auth Method

This page allows you to configure how a user is authenticated when he logs into the switch via one of the management client interfaces.

#### Authentication Method Configuration

Client	Authentication Method	Fallback
console	local ▼	<input type="checkbox"/>
telnet	local ▼	<input type="checkbox"/>
ssh	local ▼	<input type="checkbox"/>
web	local ▼	<input type="checkbox"/>

Label	Description
<b>Client</b>	The management client for which the configuration below applies.
<b>Authentication Method</b>	Authentication Method can be set to one of the following values: none: authentication is disabled and login is not possible. local: use the local user database on the switch for authentication. radius: use a remote RADIUS server for authentication.
<b>Fallback</b>	Enable fallback to local authentication by checking this box. If none of the configured authentication servers are alive, the local user database is used for authentication. This is only possible if the Authentication Method is set to a value other than 'none' or 'local'.
<input type="button" value="Save"/>	Click to save changes.
<input type="button" value="Reset"/>	Click to undo any changes made locally and revert to previously saved values.

### 5.1.2.4 IP Setting

Configure the switch-managed IP information on this page.

#### IP Configuration

	Configured	Current
<b>DHCP Client</b>	<input type="checkbox"/>	<input type="button" value="Renew"/>
<b>IP Address</b>	192.168.10.1	192.168.10.1
<b>IP Mask</b>	255.255.255.0	255.255.255.0
<b>IP Router</b>	0.0.0.0	0.0.0.0
<b>VLAN ID</b>	1	1

Label	Description
<b>DHCP Client</b>	Enable the DHCP client by checking this box. If DHCP fails and the configured IP address is zero, DHCP will retry. If DHCP fails and the configured IP address is non-zero, DHCP will stop and the configured IP settings will be used. The DHCP client will announce the configured System Name as hostname to provide DNS lookup.
<b>IP Address</b>	Assign the IP address that the network is using. If DHCP client function is enabling, you do not need to assign the IP address. The network DHCP server will assign the IP address for the switch and it will be display in this column. The default IP is 192.168.10.1
<b>IP Mask</b>	Assign the subnet mask of the IP address. If DHCP client function is enabling, you do not need to assign the subnet mask
<b>IP Router</b>	Assign the network gateway for the switch. The default gateway is 192.168.10.254
<b>VLAN ID</b>	Provide the managed VLAN ID. The allowed range is 1 through 4095.
<input type="button" value="Save"/>	Click to save changes.
<input type="button" value="Reset"/>	Click to undo any changes made locally and revert to previously saved values.

### 5.1.2.5 IPv6 Setting

Configure the switch-managed IPv6 information on this page.

#### IPv6 Configuration

	Configured	Current
<b>Auto Configuration</b>	<input type="checkbox"/>	<input type="button" value="Renew"/>
<b>Address</b>	<input type="text" value="::192.0.2.1"/>	::192.0.2.1 Link-Local Address: fe80::21e:94ff:fe01:6735
<b>Prefix</b>	<input type="text" value="96"/>	96
<b>Router</b>	<input type="text" value="::"/>	::

Label	Description
<b>Auto Configuration</b>	Enable IPv6 auto-configuration by checking this box. If system cannot obtain the stateless address in time, the configured IPv6 settings will be used. The router may delay responding to a router solicitation for a few seconds, the total time needed to complete auto-configuration can be significantly longer.
<b>Address</b>	Provide the IPv6 address of this switch. IPv6 address is in 128-bit records represented as eight fields of up to four hexadecimal digits with a colon separating each field (:). For example, 'fe80::215:c5ff:fe03:4dc7'. The symbol '::' is a special syntax that can be used as a shorthand way of representing multiple 16-bit groups of contiguous zeros; but it can appear only once. It can also represent a legally valid IPv4 address. For example, '::192.1.2.34'.
<b>Prefix</b>	Provide the IPv6 Prefix of this switch. The allowed range is 1 to 128.
<b>Router</b>	Provide the IPv6 gateway address of this switch. IPv6 address is in 128-bit records represented as eight fields of up to four hexadecimal digits with a colon separating each field (:). For example, 'fe80::215:c5ff:fe03:4dc7'. The symbol '::' is a special syntax that can be used as a shorthand way of representing multiple 16-bit groups of contiguous zeros; but it can appear only once. It can also represent a legally valid IPv4 address. . For example, '::192.1.2.34'.

### 5.1.2.6 Daylight Saving Time

#### Time Zone Configuration

Time Zone Configuration

<b>Time Zone</b>	None <span style="float: right;">▼</span>
<b>Acronym</b>	<input type="text" value=""/> ( 0 - 16 characters )

Label	Description
<b>Time Zone</b>	Lists various Time Zones worldwide. Select appropriate Time Zone from the drop down and click Save to set.
<b>Acronym</b>	User can set the acronym of the time zone. This is a User configurable acronym to identify the time zone. (Range: Up to 16 alpha-numeric characters and can contain '-', '_' or '!')

#### Daylight Saving Time Configuration

Daylight Saving Time Mode

<b>Daylight Saving Time</b>	Recurring <span style="float: right;">▼</span>
-----------------------------	--

Label	Description
<b>Daylight Saving Time</b>	This is used to set the clock forward or backward according to the configurations set below for a defined Daylight Saving Time duration. Select 'Disable' to disable the Daylight Saving Time configuration. Select 'Recurring' and configure the Daylight Saving Time duration to repeat the configuration every year. Select 'Non-Recurring' and configure the Daylight Saving Time duration for single time configuration. ( Default : Disabled )

#### Start Time Settings

Start Time settings		
<b>Week</b>	1	▼
<b>Day</b>	Sun	▼
<b>Month</b>	Jan	▼
<b>Hours</b>	0	▼
<b>Minutes</b>	0	▼

Label	Description
<b>Week</b>	Select the starting week number.
<b>Day</b>	Select the starting day.
<b>Month</b>	Select the starting month.
<b>Hours</b>	Select the starting hour.
<b>Minutes</b>	Select the starting minute.

**End Time Settings**

End Time settings		
<b>Week</b>	1	▼
<b>Day</b>	Sun	▼
<b>Month</b>	Jan	▼
<b>Hours</b>	0	▼
<b>Minutes</b>	0	▼

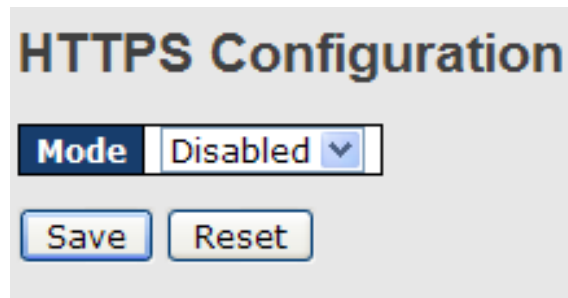

Label	Description
<b>Week</b>	Select the ending week number.
<b>Day</b>	Select the ending day.
<b>Month</b>	Select the ending month.
<b>Hours</b>	Select the ending hour.
<b>Minutes</b>	Select the ending minute.

**Offset Settings**

Offset settings		
<b>Offset</b>	1	(1 - 1440) Minutes

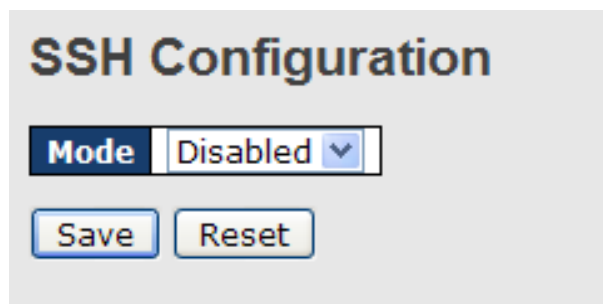

Label	Description
<b>Week</b>	ter the number of minutes to add during Daylight Saving Time. ( Range: 1 to 1440 )

### 5.1.2.7 HTTPS

Label	Description
<b>Mode</b>	Indicates the HTTPS mode operation. When the current connection is HTTPS, to apply HTTPS disabled mode operation will automatically redirect web browser to an HTTP connection. Possible modes are: Enabled: Enable HTTPS mode operation. Disabled: Disable HTTPS mode operation.
	Click to save changes.
	Click to undo any changes made locally and revert to previously saved values.

### 5.1.2.8 SSH

Label	Description
<b>Mode</b>	Indicates the SSH mode operation. Possible modes are:

	<p>Enabled: Enable SSH mode operation.</p> <p>Disabled: Disable SSH mode operation.</p>
	<p>Click to save changes.</p>
	<p>Click to undo any changes made locally and revert to previously saved values.</p>

### 5.1.2.9 DBU01 Option Config

DBU01 is an embedded configuration backup/restore function. It allows you to store and restore device configurations without using a PC.

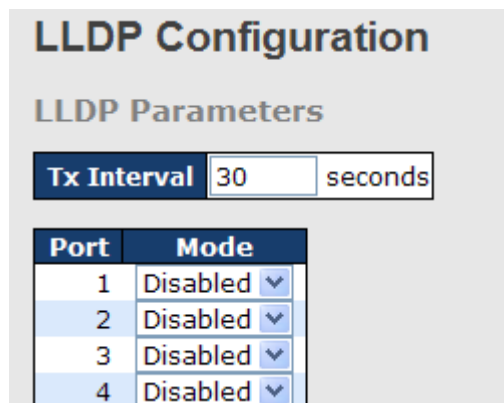

Label	Description
<b>Backup Option</b>	Enable or disable backup function. If enabled, existing configurations will be stored as a backup file.
<b>Restore Option</b>	Enable or disable backup function. If enabled, the system will apply saved configurations to the device.

### 5.1.2.10 LLDP

#### LLDP Configuration

This page allows the user to inspect and configure the current LLDP port settings.

Label	Description
<b>Port</b>	The switch port number of the logical LLDP port.
<b>Mode</b>	<p>Select LLDP mode.</p> <p>Rx only The switch will not send out LLDP information, but LLDP information from neighbor units is analyzed.</p> <p>Tx only The switch will drop LLDP information received from neighbors, but will send out LLDP information.</p> <p>Disabled The switch will not send out LLDP information, and will drop LLDP information received from neighbors.</p> <p>Enabled The switch will send out LLDP information, and will analyze LLDP information received from neighbors.</p>

## LLDP Neighbor Information

This page provides a status overview for all LLDP neighbors. The displayed table contains a row for each port on which an LLDP neighbor is detected. The columns hold the following information:

Local Port	Chassis ID	Remote Port ID	System Name	Port Description	System Capabilities	Management Address
Port 8	00-1E-94-12-45-78	7	IGS-9812GP	Port #7	Bridge(+)	192.168.10.14 (IPv4)

Label	Description
<b>Local Port</b>	The port on which the LLDP frame was received.
<b>Chassis ID</b>	The Chassis ID is the identification of the neighbor's LLDP frames.
<b>Remote Port ID</b>	The Remote Port ID is the identification of the neighbor port.
<b>System Name</b>	System Name is the name advertised by the neighbor unit.
<b>Port Description</b>	Port Description is the port description advertised by the neighbor unit.
<b>System Capabilites</b>	<p>System Capabilities describes the neighbor unit's capabilities.</p> <p>The possible capabilities are:</p> <ol style="list-style-type: none"> <li>1. Other</li> <li>2. Repeater</li> </ol>

	<p>3. Bridge</p> <p>4. WLAN Access Point</p> <p>5. Router</p> <p>6. Telephone</p> <p>7. DOCSIS cable device</p> <p>8. Station only</p> <p>9. Reserved</p> <p>When a capability is enabled, the capability is followed by (+). If the capability is disabled, the capability is followed by (-).</p>
<b>Management Address</b>	<p>Management Address is the neighbor unit's address that is used for higher layer entities to assist the discovery by the network management. This could for instance hold the neighbor's IP address.</p>
<input type="button" value="Refresh"/>	<p>Click to refresh the page immediately.</p>
<input type="checkbox"/> Auto-refresh	<p>Check this box to enable an automatic refresh of the page at regular intervals.</p>

## Port Statistics

This page provides an overview of all LLDP traffic.

Two types of counters are shown. Global counters are counters that refer to the whole stack, switch, while local counters refer to counters for the currently selected switch.

Auto-refresh <input type="checkbox"/>		<input type="button" value="Refresh"/>	<input type="button" value="Clear"/>					
<b>Global Counters</b>								
Neighbor entries were last changed at 1970-01-01 04:03:03 +0000 (26 sec. ago)								
Total Neighbors Entries Added	1							
Total Neighbors Entries Deleted	0							
Total Neighbors Entries Dropped	0							
Total Neighbors Entries Aged Out	0							
<b>LLDP Statistics</b>								
<b>Local Counters</b>								
Local Port	Tx Frames	Rx Frames	Rx Errors	Frames Discarded	TLVs Discarded	TLVs Unrecognized	Org. Discarded	Age-Outs
1	1	0	0	0	0	0	0	0
2	0	0	0	0	0	0	0	0
3	4	0	0	0	0	0	0	0
4	0	0	0	0	0	0	0	0
5	2	1	0	0	0	0	0	0
6	0	0	0	0	0	0	0	0
7	0	0	0	0	0	0	0	0
8	1	0	0	0	0	0	0	0
9	0	0	0	0	0	0	0	0
10	0	0	0	0	0	0	0	0
11	0	0	0	0	0	0	0	0
12	0	0	0	0	0	0	0	0

## Global Counters

Label	Description
-------	-------------

<b>Neighbor entries were last changed at</b>	Shows the time for when the last entry was last deleted or added.
<b>Total Neighbors Entries Added</b>	Shows the number of new entries added since switch reboot.
<b>Total Neighbors Entries Deleted</b>	Shows the number of new entries deleted since switch reboot.
<b>Total Neighbors Entries Dropped</b>	Shows the number of LLDP frames dropped due to that the entry table was full.
<b>Total Neighbors Entries Aged Out</b>	Shows the number of entries deleted due to Time-To-Live expiring.

### Local Counters

Label	Description
<b>Local Port</b>	The port on which LLDP frames are received or transmitted.
<b>Tx Frames</b>	The number of LLDP frames transmitted on the port.
<b>Rx Frames</b>	The number of LLDP frames received on the port.
<b>Rx Errors</b>	The number of received LLDP frames containing some kind of error.
<b>Frames Discarded</b>	If an LLDP frame is received on a port, and the switch's internal table has run full, the LLDP frame is counted and discarded. This situation is known as "Too Many Neighbors" in the LLDP standard. LLDP frames require a new entry in the table when the Chassis ID or Remote Port ID is not already contained within the table. Entries are removed from the table when a given port links down, an LLDP shutdown frame is received, or when the entry ages out.
<b>TLVs Discarded</b>	Each LLDP frame can contain multiple pieces of information, known as TLVs (TLV is short for "Type Length Value"). If a TLV is malformed, it is counted and discarded.
<b>TLVs Unrecognized</b>	The number of well-formed TLVs, but with an unknown type value.
<b>Org. Discarded</b>	The number of organizationally TLVs received.
<b>Age-Outs</b>	Each LLDP frame contains information about how long time the LLDP information is valid (age-out time). If no new LLDP frame is received within the age out time, the LLDP information is removed, and the Age-Out counter is incremented.

	Click to refresh the page immediately.
	Clears the local counters. All counters (including global counters) are cleared upon reboot.
Auto-refresh <input type="checkbox"/>	Check this box to enable an automatic refresh of the page at regular intervals.

### 5.1.2.11 NTP

The function allows you to specify the Network Time Protocol (NTP) servers to query for the current time to maintain an accurate time on the switch, ensuring the system log record meaningful dates and times for event entries. With NTP, the switch can set its internal clock periodically according to an NTP time server. Otherwise, the switch will only record the time from the factory default set at the last bootup. When the NTP client is enabled, the switch regularly sends a request for a time update to a configured time server. A maximum of five time servers are supported. The switch will attempt to poll each server in the configured sequence.

#### NTP Configuration

<b>Mode</b>	Client ▼
<b>Server 1</b>	<input type="text"/>
<b>Server 2</b>	<input type="text"/>
<b>Server 3</b>	<input type="text"/>
<b>Server 4</b>	<input type="text"/>
<b>Server 5</b>	<input type="text"/>

<b>Date</b>	<input type="text" value="1970-01-01"/>
<b>Time</b>	<input type="text" value="00:41:33"/>

Label	Description
<b>Mode</b>	Select a NTP mode from the drop down list.
<b>Server</b>	Sets the IP address for up to five time servers. The switch will update the time from the servers, starting from the first to the fifth in sequence if any of them fails. The polling interval is fixed at 15 minutes.

### 5.1.2.12 UPnP Config

UPnP is an acronym for Universal Plug and Play. The goals of UPnP are to allow devices to connect seamlessly and to simplify the implementation of networks in the home (data sharing, communications, and entertainment) and in corporate environments for simplified installation of computer components

<b>Mode</b>	Disabled ▼
<b>TTL</b>	4
<b>Advertising Duration</b>	100

Save    Reset

Label	Description
<b>Mode</b>	<p>Indicates the UPnP operation mode. Possible modes are:</p> <p>Enabled: Enable UPnP mode operation.</p> <p>Disabled: Disable UPnP mode operation.</p> <p>When the mode is enabled, two ACEs are added automatically to trap UPNP related packets to CPU. The ACEs are automatically removed when the mode is disabled.</p>
<b>TTL</b>	<p>The TTL value is used by UPnP to send SSDP advertisement messages. Valid values are in the range 1 to 255.</p>
<b>Advertising Duration</b>	<p>The duration, carried in SSDP packets, is used to inform a control point or control points how often it or they should receive an SSDP advertisement message from this switch. If a control point does not receive any message within the duration, it will think that the switch no longer exists. Due to the unreliable nature of UDP, in the standard it is recommended that such refreshing of advertisements to be done at less than one-half of the advertising duration. In the implementation, the switch sends SSDP messages periodically at the interval one-half of the advertising duration minus 30 seconds. Valid values are in the range 100 to 86400.</p>

### 5.1.2.13 Modbus TCP

Support Modbus TCP. (About Modbus please reference <http://www.modbus.org/>)

The following table describes the labels in this screen.

Label	Description
<b>Mode</b>	Enable or Disable Modbus TCP function

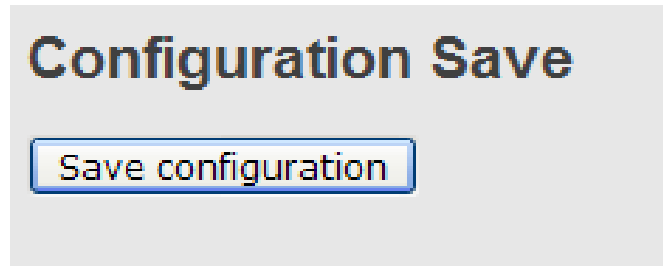

### 5.1.2.14 EtherNet /IP

EtherNet/IP is an industrial network protocol that adapts the Common Industrial Protocol to standard Ethernet.[1] EtherNet/IP is one of the leading industrial protocols in the United States and is widely used in a range of industries including factory, hybrid and process.

Label	Description
<b>Mode</b>	Indicates the EtherNet/IP mode operation. Possible modes are:  Enabled: Enable EtherNet/IP mode operation.  Disabled: Disable EtherNet/IP mode operation.

### 5.1.2.15 Backup/Restore Configuration

You can save/view or load the switch configuration. The configuration file is in XML format with a hierarchy of tags:

### 5.1.2.16 Firmware Update

This page facilitates an update of the firmware controlling the stack. switch.

### 5.1.3 DHCP Server

#### 5.1.3.1 Setting

The system provides with DHCP server function. Enable the DHCP server function, the switch system will be a DHCP server.

### DHCP Server Configuration

<b>Enabled</b>	<input checked="" type="checkbox"/>
<b>Start IP Address</b>	192.168.10.100
<b>End IP Address</b>	192.168.10.200
<b>Subnet Mask</b>	255.255.255.0
<b>Router</b>	192.168.10.254
<b>DNS</b>	192.168.10.254
<b>Lease Time (sec.)</b>	86400
<b>TFTP Server</b>	0.0.0.0
<b>Boot File Name</b>	

#### 5.1.3.2 DHCP Dynamic Client List

When the DHCP server function is activated, the system will collect the DHCP client information and display in here.

### DHCP Dynamic Client List

No.	Select	Type	MAC Address	IP Address	Surplus Lease
<input type="button" value="Select/Clear All"/> <input type="button" value="Add to static Table"/>					

#### 5.1.3.3 DHCP Client List

You can assign the specific IP address which is in the assigned dynamic IP range to the specific port. When the device is connecting to the port and asks for dynamic IP assigning, the system will assign the IP address that has been assigned before in the connected device.

**DHCP Client List**

MAC Address

IP Address

No.	Select	Type	MAC Address	IP Address	Surplus Lease
<input type="button" value="Delete"/> <input type="button" value="Select/Clear All"/>					

### 5.1.3.4 DHCP Relay Agent

DHCP Relay is used to forward and to transfer DHCP messages between the clients and the server when they are not on the same subnet domain.

#### 5.1.3.4.1 Relay

**DHCP Relay Configuration**

Relay Mode	Disabled <input type="button" value="v"/>
Relay Server	0.0.0.0 <input type="text"/>
Relay Information Mode	Enabled <input type="button" value="v"/>
Relay Information Policy	Replace <input type="button" value="v"/>

The following table describes the labels in this screen.

Label	Description
<b>Relay Mode</b>	<p>Indicates the DHCP relay mode operation. Possible modes are:</p> <p>Enabled: Enable DHCP relay mode operation. When DHCP relay mode operation is enabled, the agent forwards and transfers DHCP messages between the clients and the server when they are not in the same subnet domain. And the DHCP broadcast message won't be flooded for security considerations.</p> <p>Disabled: Disable DHCP relay mode operation.</p>
<b>Relay Server</b>	<p>Indicates the DHCP relay server IP address. A DHCP relay agent is used to forward and to transfer DHCP messages between the clients and the server when they are not in the</p>

	same subnet domain.
<b>Relay Information Mode</b>	<p>Indicates the DHCP relay information mode option operation.</p> <p>The option 82 circuit ID format as "[vlan_id][module_id][port_no]". The first four characters represent the VLAN ID, the fifth and sixth characters are the module ID(in standalone device it always equal 0, in stackable device it means switch ID). ), and the last two characters are the port number. For example, "00030108" means the DHCP message receive form VLAN ID 3, switch ID 1, port No 8. And the option 82 remote ID value is equal the switch MAC address.</p> <p>Possible modes are:</p> <p>Enabled: Enable DHCP relay information mode operation. When DHCP relay information mode operation is enabled, the agent inserts specific information (option 82) into a DHCP message when forwarding to DHCP server and removes it from a DHCP message when transferring to DHCP client. It only works when DHCP relay operation mode is enabled.</p> <p>Disabled: Disable DHCP relay information mode operation.</p>
<b>Relay Information Policy</b>	<p>Indicates the DHCP relay information option policy. When DHCP relay information mode operation is enabled, if agent receives a DHCP message that already contains relay agent information it will enforce the policy. The 'Replace' option is invalid when relay information mode is disabled. Possible policies are:</p> <p>Replace: Replace the original relay information when a DHCP message that already contains it is received.</p> <p>Keep: Keep the original relay information when a DHCP message that already contains it is received.</p> <p>Drop: Drop the package when a DHCP message that already contains relay information is received.</p>

### 5.1.3.4.2 Relay Statistics

Auto-refresh

#### DHCP Relay Statistics

##### Server Statistics

Transmit to Server	Transmit Error	Receive from Server	Receive Missing Agent Option	Receive Missing Circuit ID	Receive Missing Remote ID	Receive Bad Circuit ID	Receive Bad Remote ID
0	0	0	0	0	0	0	0

The following table describes the labels in this screen.

Label	Description
<b>Transmit to Sever</b>	The number of packets that are relayed from client to server.
<b>Transmit Error</b>	The number of packets that resulted in errors while being sent to clients.
<b>Receive from Server</b>	The number of packets received from server.
<b>Receive Missing Agent Option</b>	The number of packets received without agent information options.
<b>Receive Missing Cirucit ID</b>	The number of packets received with the Circuit ID option missing.
<b>Receive Missing Remote ID</b>	The number of packets received with the Remote ID option missing.
<b>Receive Bad Circuit ID</b>	The number of packets whose Circuit ID option did not match known circuit ID.
<b>Receive Bad Remote ID</b>	The number of packets whose Remote ID option did not match known Remote ID.

##### Client Statistics

Transmit to Client	Transmit Error	Receive from Client	Receive Agent Option	Replace Agent Option	Keep Agent Option	Drop Agent Option
0	0	0	0	0	0	0

The following table describes the labels in this screen.

Label	Description
<b>Transmit to Client</b>	The number of relayed packets from server to client.
<b>Transmit Error</b>	The number of packets that resulted in error while being sent to servers.
<b>Receive from Client</b>	The number of received packets from server.

<b>Receive Agent Option</b>	The number of received packets with relay agent information option.
<b>Replace Agent Option</b>	The number of packets which were replaced with relay agent information option.
<b>Keep Agent Option</b>	The number of packets whose relay agent information was retained.
<b>Drop Agent Option</b>	The number of packets that were dropped which were received with relay agent information.

## 5.1.4 Port Setting

### 5.1.4.1 Port Control

This page displays current port configurations. Ports can also be configured here.

**Port Configuration**

Refresh

Port	Link	Speed		Flow Control			Maximum Frame Size	Power Control

<p></p>	<p>Click to refresh the page. Any changes made locally will be undone.</p>

### 5.1.4.2 Port Alias

This page is available to let users add descriptions on the port.

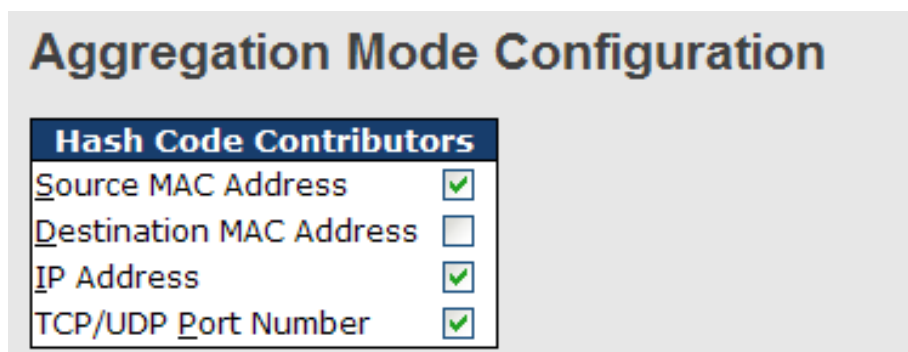

Label	Description
<b>Port</b>	This is the logical port number for this row.
<b>Port Alias</b>	Add descriptions on the port.

### 5.1.4.3 Port Trunk

#### 5.1.4.3.1 Trunk Configuration

This page is used to configure the Aggregation hash mode and the aggregation group.

Label	Description
<b>Source MAC Address</b>	The Source MAC address can be used to calculate the destination port for the frame. Check to enable the use of the Source MAC address, or uncheck to disable. By default, Source MAC Address is enabled.
<b>Destination MAC Address</b>	The Destination MAC Address can be used to calculate the destination port for the frame. Check to enable the use of the Destination MAC Address, or uncheck to disable. By default, Destination MAC Address is disabled.
<b>IP Address</b>	The IP address can be used to calculate the destination port for the frame. Check to enable the use of the IP Address, or uncheck to disable. By default, IP Address is enabled.
<b>TCP/UDP Port Number</b>	The TCP/UDP port number can be used to calculate the destination port for the frame. Check to enable the use of the TCP/UDP Port Number, or uncheck to disable. By default, TCP/UDP Port Number is enabled.

### Aggregation Group Configuration

Group ID	Port Members											
	1	2	3	4	5	6	7	8	9	10	11	12

Save    Reset

Label	Description
<b>Port</b>	Indicates the group ID for the settings contained in the same row. Group ID "Normal" indicates there is no aggregation. Only one group ID is valid per port.
<b>LACP Enabled</b>	Each switch port is listed for each group ID. Select a radio button to include a port in an aggregation, or clear the radio button to remove the port from the aggregation. By default, no ports belong to any aggregation group. Only full duplex ports can join an aggregation and ports must be in the same speed in each group.
<b>Key</b>	The Key value incurred by the port, range 1-65535 . The Auto setting will set the key as appropriate by the physical link speed, 10Mb = 1, 100Mb = 2, 1Gb = 3. Using the Specific setting, a user-defined value can be entered. Ports with the same Key value can participate in the same aggregation group, while ports with different keys cannot.
<b>Role</b>	The Role shows the LACP activity status. The Active will transmit LACP packets each second, while Passive will wait for a LACP packet from a partner (speak if spoken to).

	Click to save changes.
	Click to undo any changes made locally and revert to previously saved values.

### 5.1.4.3.3 LACP System Status

This page provides a status overview for all LACP instances.

Label	Description
<b>Aggr ID</b>	The Aggregation ID associated with this aggregation instance. For LLAG the id is shown as 'isid:aggr-id' and for GLAGs as 'aggr-id'
<b>Partner System ID</b>	The system ID (MAC address) of the aggregation partner.
<b>Partner Key</b>	The Key that the partner has assigned to this aggregation ID.
<b>Last Changed</b>	The time since this aggregation changed.
<b>Last Changed</b>	Shows which ports are a part of this aggregation for this switch/stack. The format is: "Switch ID:Port".
	Click to refresh the page immediately.
	Check this box to enable an automatic refresh of the page at regular intervals.

### 5.1.4.3.4 LACP Status

This page provides a status overview for LACP status for all ports.

## LACP Status

Auto-refresh  Refresh Open in new window

Port	LACP	Key	Aggr ID	Partner System ID	Partner Port
1	No	-	-	-	-
2	No	-	-	-	-
3	No	-	-	-	-
4	No	-	-	-	-
5	No	-	-	-	-
6	No	-	-	-	-
7	No	-	-	-	-
8	No	-	-	-	-
9	No	-	-	-	-
10	No	-	-	-	-
11	No	-	-	-	-
12	No	-	-	-	-

Label	Description
<b>Port</b>	The switch port number.
<b>LACP</b>	'Yes' means that LACP is enabled and the port link is up. 'No' means that LACP is not enabled or that the port link is down. 'Backup' means that the port could not join the aggregation group but will join if other port leaves. Meanwhile it's LACP status is disabled.
<b>Key</b>	The key assigned to this port. Only ports with the same key can aggregate together.
<b>Aggr ID</b>	The Aggregation ID assigned to this aggregation group.
<b>Partner System ID</b>	The partners System ID (MAC address).
<b>Partner Port</b>	The partners port number connected to this port.
	Click to refresh the page immediately.
	Check this box to enable an automatic refresh of the page at regular intervals.

### 5.1.4.3.5 LACP Statistics

This page provides an overview for LACP statistics for all ports.

**LACP Statistics**

Auto-refresh  Refresh Clear

Port	LACP Transmitted	LACP Received	Discarded	
			Unknown	Illegal
1	0	0	0	0
2	0	0	0	0
3	0	0	0	0
4	0	0	0	0
5	0	0	0	0
6	0	0	0	0
7	0	0	0	0
8	0	0	0	0
9	0	0	0	0
10	0	0	0	0
11	0	0	0	0
12	0	0	0	0

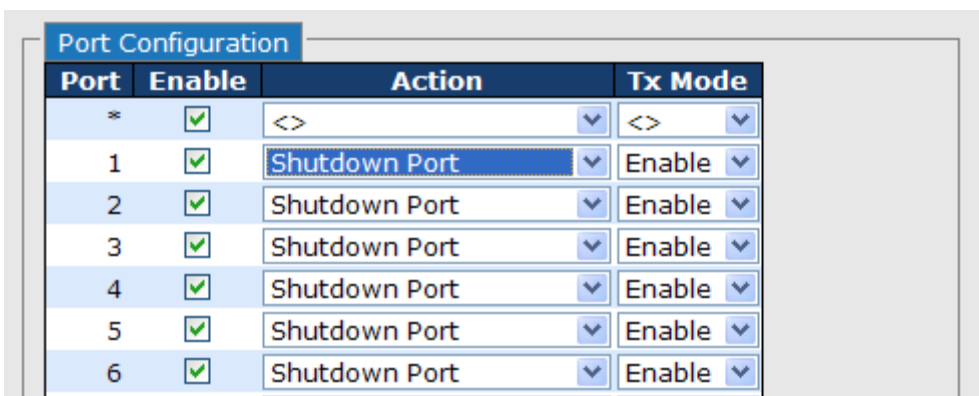

Label	Description
<b>Port</b>	The switch port number
<b>LACP Transmitted</b>	Shows how many LACP frames have been sent from each port
<b>LACP Received</b>	Shows how many LACP frames have been received at each port.
<b>Discarded</b>	Shows how many unknown or illegal LACP frames have been discarded at each port.
	Click to refresh the page immediately.
	Check this box to enable an automatic refresh of the page at regular intervals.
	Clears the counters for all ports

### 5.1.4.4 Loop Gourd

This feature prevents the loop attack,. When the port receives loop packet. This port will auto disable, prevent the "loop attack" affect other network devices

Label	Description
<b>Enable Loop Protection</b>	Controls whether loop protections is enabled (as a whole).
<b>Transmission Time</b>	The interval between each loop protection PDU sent on each port. valid values are 1 to 10 seconds.
<b>Shutdown Time</b>	The period (in seconds) for which a port will be kept disabled in the event of a loop is detected (and the port action shuts down the port). Valid values are 0 to 604800 seconds (7 days). A value of zero will keep a port disabled (until next device restart).

Label	Description
<b>Port</b>	The switch port number of the port.
<b>Enable</b>	Controls whether loop protection is enabled on this switch port.
<b>Action</b>	Configures the action performed when a loop is detected on a port. Valid values are Shutdown Port, Shutdown Port and Log

	or Log Only.
<b>Tx Mode</b>	Controls whether the port is actively generating loop protection PDU's, or whether it is just passively looking for looped PDU's.

## 5.1.5 Redundancy

### 5.1.5.1 O-Ring

Ring is the most powerful Ring in the world. The recovery time of Ring is less than 30 ms. It can reduce unexpected damage caused by network topology change. Ring Supports 3 Ring topology: Ring, Coupling Ring and Dual Homing.

The screenshot shows the 'O-Ring Configuration' interface. It features a table of settings with checkboxes and dropdown menus. The 'O-Ring' section is checked, and its 'Ring Master' is set to 'Disable' with a note 'This switch is Not a Ring Master.'. The '1st Ring Port' is 'Port 1' and the '2nd Ring Port' is 'Port 2', both showing 'LinkDown' status. The 'Coupling Ring' and 'Dual Homing' sections are unchecked. The 'Coupling Port' is 'Port 3' and the 'Homing Port' is 'Port 4', both showing 'LinkDown' status. At the bottom are 'Save' and 'Refresh' buttons.

O-Ring Configuration		
<input checked="" type="checkbox"/>	<b>O-Ring</b>	
<b>Ring Master</b>	Disable	This switch is Not a Ring Master.
<b>1st Ring Port</b>	Port 1	LinkDown
<b>2nd Ring Port</b>	Port 2	LinkDown
<input type="checkbox"/>	<b>Coupling Ring</b>	
<b>Coupling Port</b>	Port 3	LinkDown
<input type="checkbox"/>	<b>Dual Homing</b>	
<b>Homing Port</b>	Port 4	LinkDown

Ring interface

The following table describes the labels in this screen.

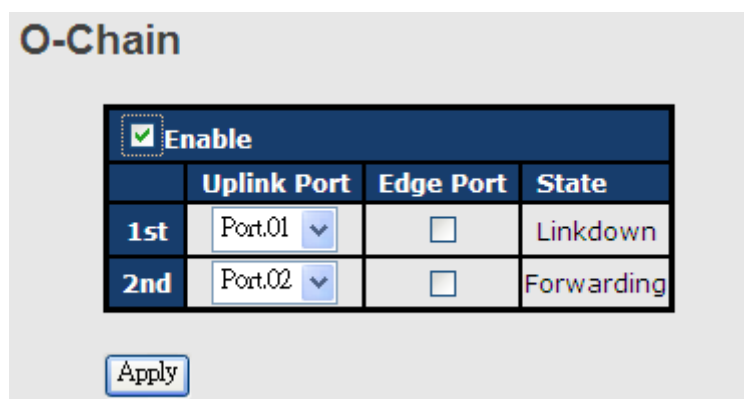

Label	Description
<b>Redundant Ring</b>	Mark to enable Ring.
<b>Ring Master</b>	There should be one and only one Ring Master in a ring. However if there are two or more switches which set Ring Master to enable, the switch with the lowest MAC address will be the actual Ring Master and others will be Backup Masters.
<b>1<sup>st</sup> Ring Port</b>	The primary port, when this switch is Ring Master.
<b>2<sup>nd</sup> Ring Port</b>	The backup port, when this switch is Ring Master.
<b>Coupling Ring</b>	Mark to enable Coupling Ring. Coupling Ring can be used to divide a big ring into two smaller rings to avoid effecting all switches when network topology change. It is a good application for connecting two Rings.

<b>Coupling Port</b>	Link to Coupling Port of the switch in another ring. Coupling Ring need four switch to build an active and a backup link. Set a port as coupling port. The coupled four ports of four switches will be run at active/backup mode.
<b>Dual Homing</b>	Mark to enable Dual Homing. By selecting Dual Homing mode, Ring will be connected to normal switches through two RSTP links (ex: backbone Switch). The two links work as active/backup mode, and connect each Ring to the normal switches in RSTP mode.
<b>Apply</b>	Click " <b>Apply</b> " to set the configurations.

**Note:** We don't suggest you to set one switch as a Ring Master and a Coupling Ring at the same time due to heavy load.

### 5.1.5.2 O-Chain

O-Chain is the revolutionary network redundancy technology that provides the add-on network redundancy topology for any backbone network, providing ease-of-use while maximizing fault-recovery swiftness, flexibility, compatibility, and cost-effectiveness in one set of network redundancy topologies O-Chain allows multiple redundant network rings of different redundancy protocols to join and function together as a larger and more robust compound network topology, i.e. the creation of multiple redundant networks beyond the limitations of current redundant ring technology.

Label	Description
<b>Enable</b>	Enabling the O-Chain function
<b>1<sup>st</sup> Ring Port</b>	Choosing the port which connect to the ring
<b>2<sup>nd</sup> Ring Port</b>	Choosing the port which connect to the ring
<b>Edge Port</b>	In the O-Chain application, the head and tail of two Switch Port, must start the Edge,MAC smaller Switch, Edge port will be the backup and RM LED Light.

### 5.1.5.3 OPEN-Ring

Open-Ring is a technology developed by ORing to enhance ORing switches' interoperability with other vendors' products. With this technology, you can add any ORing switches to the network based on other ring technologies.

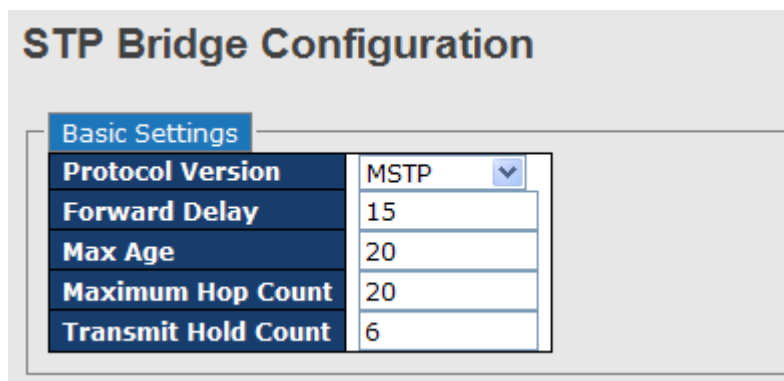

Label	Description
<b>Enable</b>	Check to enable Open-Ring topology
<b>Vender</b>	Choose the venders that you want to join in their rings
<b>1<sup>st</sup> Ring Port</b>	The first port to connect to the ring
<b>2<sup>nd</sup> Ring Port</b>	The second port to connect to the ring

### 5.1.5.4 MSTP Bridge Settings

This page allows you to configure RSTP system settings. The settings are used by all RSTP Bridge instances in the Switch Stack.

Label	Description
<b>Protocol Version</b>	The STP protocol version setting. Valid values are STP, RSTP and MSTP.
<b>Forward Delay</b>	The delay used by STP Bridges to transition Root and Designated Ports to Forwarding (used in STP compatible mode). Valid values are in the range 4 to 30 seconds.

<b>Max Age</b>	The maximum age of the information transmitted by the Bridge when it is the Root Bridge. Valid values are in the range 6 to 40 seconds, and MaxAge must be $\leq (\text{FwdDelay}-1)*2$ .
<b>Maximum Hop Count</b>	This defines the initial value of remainingHops for MSTI information generated at the boundary of an MSTI region. It defines how many bridges a root bridge can distribute its BPDU information. Valid values are in the range 4 to 30 seconds, and MaxAge must be $\leq (\text{FwdDelay}-1)*2$ .
<b>Transmit Hold Count</b>	The number of BPDU's a bridge port can send per second. When exceeded, transmission of the next BPDU will be delayed. Valid values are in the range 1 to 10 BPDU's per second.
	Click to save changes.
	Click to undo any changes made locally and revert to previously saved values.

## MSTI Mapping

This page allows the user to inspect the current STP MSTI bridge instance priority configurations, and possibly change them as well.

### MSTI Configuration

Add VLANs separated by spaces or comma.

**Unmapped VLANs are mapped to the CIST.** (The default bridge instance).

Configuration Identification

<b>Configuration Name</b>	00-1e-94-ff-ff-ff
<b>Configuration Revision</b>	0

---

MSTI Mapping

MSTI	VLANs Mapped
MST1	
MST2	
MST3	
MST4	
MST5	
MST6	
MST7	

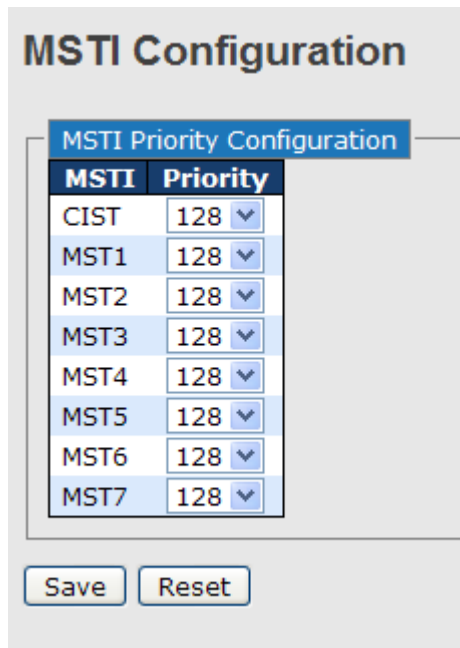

Save Reset

Label	Description
<b>Configuration Name</b>	The name identifying the VLAN to MSTI mapping. Bridges must share the name and revision (see below), as well as the VLAN-to-MSTI mapping configuration in order to share spanning trees for MSTI's. (Intra-region). The name is at most 32 characters.
<b>Configuration Revision</b>	The revision of the MSTI configuration named above. This must be an integer between 0 and 65535.
<b>MSTI</b>	The bridge instance. The CIST is not available for explicit mapping, as it will receive the VLANs not explicitly mapped.
<b>VLANs Mapped</b>	The list of VLAN's mapped to the MSTI. The VLANs must be separated with comma and/or space. A VLAN can only be mapped to one MSTI. An unused MSTI should just be left empty. (I.e. not having any VLANs mapped to it.)
Save	Click to save changes.

<input type="button" value="Reset"/>	Click to undo any changes made locally and revert to previously saved values.
--------------------------------------	---

### MSTI Priorities

This page allows the user to inspect the current STP MSTI bridge instance priority configurations, and possibly change them as well.

Label	Description
<b>MSTI</b>	The bridge instance. The CIST is the default instance, which is always active.
<b>Priority</b>	Controls the bridge priority. Lower numerical values have better priority. The bridge priority plus the MSTI instance number, concatenated with the 6-byte MAC address of the switch forms a Bridge Identifier.
<input type="button" value="Save"/>	Click to save changes.
<input type="button" value="Reset"/>	Click to undo any changes made locally and revert to previously saved values.

### CIST Ports

This page allows the user to inspect the current STP CIST port configurations, and possibly

change them as well. This page contains settings for physical and aggregated ports. The aggregation settings are stack global.

### STP CIST Ports Configuration

CIST Aggregated Ports Configuration

Port	STP Enabled	Path Cost	Priority	Admin Edge	Auto Edge	Restricted Role	TCN	BPDU Guard	Point-to-point
-	<input type="checkbox"/>	Auto	128	Edge	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Forced True

CIST Normal Ports Configuration

Port	STP Enabled	Path Cost	Priority	Admin Edge	Auto Edge	Restricted Role	TCN	BPDU Guard	Point-to-point
1	<input type="checkbox"/>	Auto	128	Edge	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Auto
2	<input type="checkbox"/>	Auto	128	Edge	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Auto
3	<input type="checkbox"/>	Auto	128	Edge	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Auto
4	<input type="checkbox"/>	Auto	128	Edge	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Auto
5	<input type="checkbox"/>	Auto	128	Edge	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Auto
6	<input type="checkbox"/>	Auto	128	Edge	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Auto

Label	Description
<b>Port</b>	The switch port number of the logical STP port.
<b>STP Enabled</b>	Controls whether STP is enabled on this switch port.
<b>Path Cost</b>	Controls the path cost incurred by the port. The Auto setting will set the path cost as appropriate by the physical link speed, using the 802.1D recommended values. Using the Specific setting, a user-defined value can be entered. The path cost is used when establishing the active topology of the network. Lower path cost ports are chosen as forwarding ports in favor of higher path cost ports. Valid values are in the range 1 to 200000000.
<b>Priority</b>	Controls the port priority. This can be used to control priority of ports having identical port cost. (See above).
<b>OpenEdge(setate flag)</b>	Operational flag describing whether the port is connecting directly to edge devices. (No Bridges attached). Transitioning to the forwarding state is faster for edge ports (having operEdge true) than for other ports.
<b>AdminEdge</b>	Controls whether the operEdge flag should start as being set or cleared. (The initial operEdge state when a port is initialized).
<b>AutoEdge</b>	Controls whether the bridge should enable automatic edge detection on the bridge port. This allows operEdge to be derived from whether BPDU's are received on the port or not.
<b>Restricted Role</b>	If enabled, causes the port not to be selected as Root Port for the CIST or any MSTI, even if it has the best spanning tree priority vector. Such a port will be selected as an Alternate Port after the

	<p>Root Port has been selected. If set, it can cause lack of spanning tree connectivity. It can be set by a network administrator to prevent bridges external to a core region of the network influencing the spanning tree active topology, possibly because those bridges are not under the full control of the administrator. This feature is also known as Root Guard.</p>
<b>Restricted TCN</b>	<p>If enabled, causes the port not to propagate received topology change notifications and topology changes to other ports. If set it can cause temporary loss of connectivity after changes in a spanning tree's active topology as a result of persistent incorrectly learned station location information. It is set by a network administrator to prevent bridges external to a core region of the network, causing address flushing in that region, possibly because those bridges are not under the full control of the administrator or is the physical link state for the attached LANs transitions frequently.</p>
<b>Point2Point</b>	<p>Controls whether the port connects to a point-to-point LAN rather than a shared medium. This can be automatically determined, or forced either true or false. Transition to the forwarding state is faster for point-to-point LANs than for shared media.</p>
	<p>Click to save changes.</p>
	<p>Click to undo any changes made locally and revert to previously saved values.</p>

## MSTI Ports

This page allows the user to inspect the current STP MSTI port configurations, and possibly change them as well. A MSTI port is a virtual port, which is instantiated separately for each active CIST (physical) port for each MSTI instance configured and applicable for the port. The MSTI instance must be selected before displaying actual MSTI port configuration options.

This page contains MSTI port settings for physical and aggregated ports. The aggregation settings are stack global.

Label	Description
<b>Port</b>	The switch port number of the corresponding STP CIST (and MSTI) port.
<b>Path Cost</b>	Controls the path cost incurred by the port. The Auto setting will set the path cost as appropriate by the physical link speed, using the 802.1D recommended values. Using the Specific setting, a user-defined value can be entered. The path cost is used when establishing the active topology of the network. Lower path cost ports are chosen as forwarding ports in favor of higher path cost ports. Valid values are in the range 1 to 200000000.
<b>Priority</b>	Controls the port priority. This can be used to control priority of ports having identical port cost. (See above).
	Click to save changes.
	Click to undo any changes made locally and revert to previously saved values.

## STP Bridges

This page provides a status overview for all STP bridge instances.

The displayed table contains a row for each STP bridge instance, where the column displays the following information:

**STP Bridges**

Auto-refresh

MSTI	Bridge ID	Root			Topology Flag	Topology Change Last
		ID	Port	Cost		
	80:00-00:1E:94:FF:FF:FF	80:00-00:1E:94:FF:FF:FF	-	0	Steady	-

Label	Description
<b>MSTI</b>	The Bridge Instance. This is also a link to the STP Detailed Bridge Status.
<b>Bridge ID</b>	The Bridge ID of this Bridge instance.
<b>Root ID</b>	The Bridge ID of the currently elected root bridge.
<b>Root Port</b>	The switch port currently assigned the root port role.
<b>Root Cost</b>	Root Path Cost. For the Root Bridge this is zero. For all other Bridges, it is the sum of the Port Path Costs on the least cost path to the Root Bridge.
<b>Topology Flag</b>	The current state of the Topology Change Flag for this Bridge instance.
<b>Topology Change Last</b>	The time since last Topology Change occurred.
<input type="button" value="Refresh"/>	Click to refresh the page immediately.
Auto-refresh <input type="checkbox"/>	Check this box to enable an automatic refresh of the page at regular intervals.

## STP Port Status

This page displays the STP CIST port status for port physical ports in the currently selected switch.

### STP Port Status

Auto-refresh

Port	CIST Role	CIST State	Uptime
1	Non-STP	Forwarding	-
2	Non-STP	Forwarding	-
3	Non-STP	Forwarding	-
4	Non-STP	Forwarding	-
5	Non-STP	Forwarding	-
6	Non-STP	Forwarding	-
7	Non-STP	Forwarding	-
8	Non-STP	Forwarding	-
9	Non-STP	Forwarding	-
10	Non-STP	Forwarding	-
11	Non-STP	Forwarding	-
12	Non-STP	Forwarding	-

Label	Description
<b>Port</b>	The switch port number of the logical STP port.
<b>CIST Role</b>	The current STP port role of the CIST port. The port role can be one of the following values: AlternatePort BackupPort RootPort DesignatedPort.
<b>State</b>	The current STP port state of the CIST port. The port state can be one of the following values: Blocking Learning Forwarding.
<b>Uptime</b>	The time since the bridge port was last initialized.
<input type="button" value="Refresh"/>	Click to refresh the page immediately.
Auto-refresh <input type="checkbox"/>	Check this box to enable an automatic refresh of the page at regular intervals.

## STP Statistics

This page displays the RSTP port statistics counters for bridge ports in the currently selected switch.

### STP Statistics

Auto-refresh

Port	Transmitted				Received				Discarded	
	MSTP	RSTP	STP	TCN	MSTP	RSTP	STP	TCN	Unknown	Illegal
No ports enabled										

Label	Description
<b>Port</b>	The switch port number of the logical RSTP port.
<b>RSTP</b>	The number of RSTP Configuration BPDU's received/transmitted on the port.
<b>STP</b>	The number of legacy STP Configuration BPDU's received/transmitted on the port.
<b>TCN</b>	The number of (legacy) Topology Change Notification BPDU's received/transmitted on the port.
<b>Discarded Unknown</b>	The number of unknown Spanning Tree BPDU's received (and discarded) on the port.
<b>Discarded Illegal</b>	The number of illegal Spanning Tree BPDU's received (and discarded) on the port.
	Click to refresh the page immediately.
	Check this box to enable an automatic refresh of the page at regular intervals.

### 5.1.5.5 Fast Recovery mode

The Fast Recovery Mode can be set to connect multiple ports to one or more switches. The IGPS-9084GP-LA with its fast recovery mode will provide redundant links. Fast Recovery mode supports 12 priorities, only the first priority will be the act port, the other ports configured with other priority will be the backup ports.

Fast Recovery Mode interface

The following table describes the labels in this screen.

Label	Description
<b>Active</b>	Activate the fast recovery mode.
<b>port</b>	Port can be configured as 12 priorities. Only the port with highest priority will be the active port. 1st Priority is the highest.
<b>Apply</b>	Click " <b>Apply</b> " to activate the configurations.

## 5.1.6 VLAN

### 5.1.6.1 VLAN Membership Configuration

The VLAN membership configuration for the selected stack switch unit switch can be monitored and modified here. Up to 64 VLANs are supported. This page allows for adding and deleting VLANs as well as adding and deleting port members of each VLAN.

### VLAN Membership Configuration

Start from VLAN  with  entries per page.

Delete	VLAN ID	VLAN Name	Port Members												
			1	2	3	4	5	6	7	8	9	10	11	12	
<input type="checkbox"/>	1	default	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓

Label	Description
<b>Delete</b>	Check to delete the entry. It will be deleted during the next save.
<b>VLAN ID</b>	The VLAN ID for the entry.
<b>MAC Address</b>	The MAC address for the entry.
<b>Port Members</b>	Checkmarks indicate which ports are members of the entry. Check or uncheck as needed to modify the entry.
<b>Adding a New Static Entry</b>	<p>Click <input type="button" value="Add New VLAN"/> to add a new VLAN ID. An empty row is added to the table, and the VLAN can be configured as needed. Legal values for a VLAN ID are 1 through 4095.</p> <p>The VLAN is enabled on the selected stack switch unit when you click on "Save". The VLAN is thereafter present on the other stack</p>

switch units, but with no port members.

A VLAN without any port members on any stack unit will be deleted when you click "Save".

The  button can be used to undo the addition of new VLANs.

### 5.1.6.2 VLAN Port Configuration

Auto-refresh

Ethertype for Custom S-ports 0x

#### VLAN Port Configuration

Port	Port Type	Ingress Filtering	Frame Type	Port VLAN		Tx Tag
				Mode	ID	
*	<>	<input type="checkbox"/>	<>	<>	1	<>
1	Unaware	<input type="checkbox"/>	All	Specific	1	Untag_pvid
2	Unaware	<input type="checkbox"/>	All	Specific	1	Untag_pvid
3	Unaware	<input type="checkbox"/>	All	Specific	1	Untag_pvid
4	Unaware	<input type="checkbox"/>	All	Specific	1	Untag_pvid
5	Unaware	<input type="checkbox"/>	All	Specific	1	Untag_pvid
6	Unaware	<input type="checkbox"/>	All	Specific	1	Untag_pvid
7	Unaware	<input type="checkbox"/>	All	Specific	1	Untag_pvid
8	Unaware	<input type="checkbox"/>	All	Specific	1	Untag_pvid
9	Unaware	<input type="checkbox"/>	All	Specific	1	Untag_pvid
10	Unaware	<input type="checkbox"/>	All	Specific	1	Untag_pvid
11	Unaware	<input type="checkbox"/>	All	Specific	1	Untag_pvid
12	Unaware	<input type="checkbox"/>	All	Specific	1	Untag_pvid

Label	Description
<b>Ethertype for customer S-Ports</b>	This field specifies the ether type used for Custom S-ports. This is a global setting for all the Custom S-ports.
<b>Port</b>	This is the logical port number of this row.
<b>Port type</b>	Port can be one of the following types: Unaware, Customer port(C-port), Service port(S-port), Custom Service port(S-custom-port) If Port Type is Unaware, all frames are classified to the Port VLAN ID and tags are not removed.

<b>Ingress Filtering</b>	<p>Enable ingress filtering on a port by checking the box. This parameter affects VLAN ingress processing. If ingress filtering is enabled and the ingress port is not a member of the classified VLAN of the frame, the frame is discarded. By default, ingress filtering is disabled (no checkmark).</p>
<b>Frame Type</b>	<p>Determines whether the port accepts all frames or only tagged/untagged frames. This parameter affects VLAN ingress processing. If the port only accepts tagged frames, untagged frames received on the port are discarded. By default, the field is set to All.</p>
<b>Port VLAN Mode</b>	<p>Configures the Port VLAN Mode. The allowed values are None or Specific. This parameter affects VLAN ingress and egress processing.</p> <p>If None is selected, a VLAN tag with the classified VLAN ID is inserted in frames transmitted on the port. This mode is normally used for ports connected to VLAN aware switches. Tx tag should be set to Untag_pvid when this mode is used.</p> <p>If Specific (the default value) is selected, a Port VLAN ID can be configured (see below). Untagged frames received on the port are classified to the Port VLAN ID. If VLAN awareness is disabled, all frames received on the port are classified to the Port VLAN ID. If the classified VLAN ID of a frame transmitted on the port is different from the Port VLAN ID, a VLAN tag with the classified VLAN ID is inserted in the frame.</p>
<b>Port VLAN ID</b>	<p>Configures the VLAN identifier for the port. The allowed values are from 1 through 4095. The default value is 1.</p> <p>Note: The port must be a member of the same VLAN as the Port VLAN ID.</p>
<b>Tx Tag</b>	<p>Determines egress tagging of a port. Untag_pvid - All VLANs except the configured PVID will be tagged. Tag_all - All VLANs are tagged. Untag_all - All VLANs are untagged.</p>

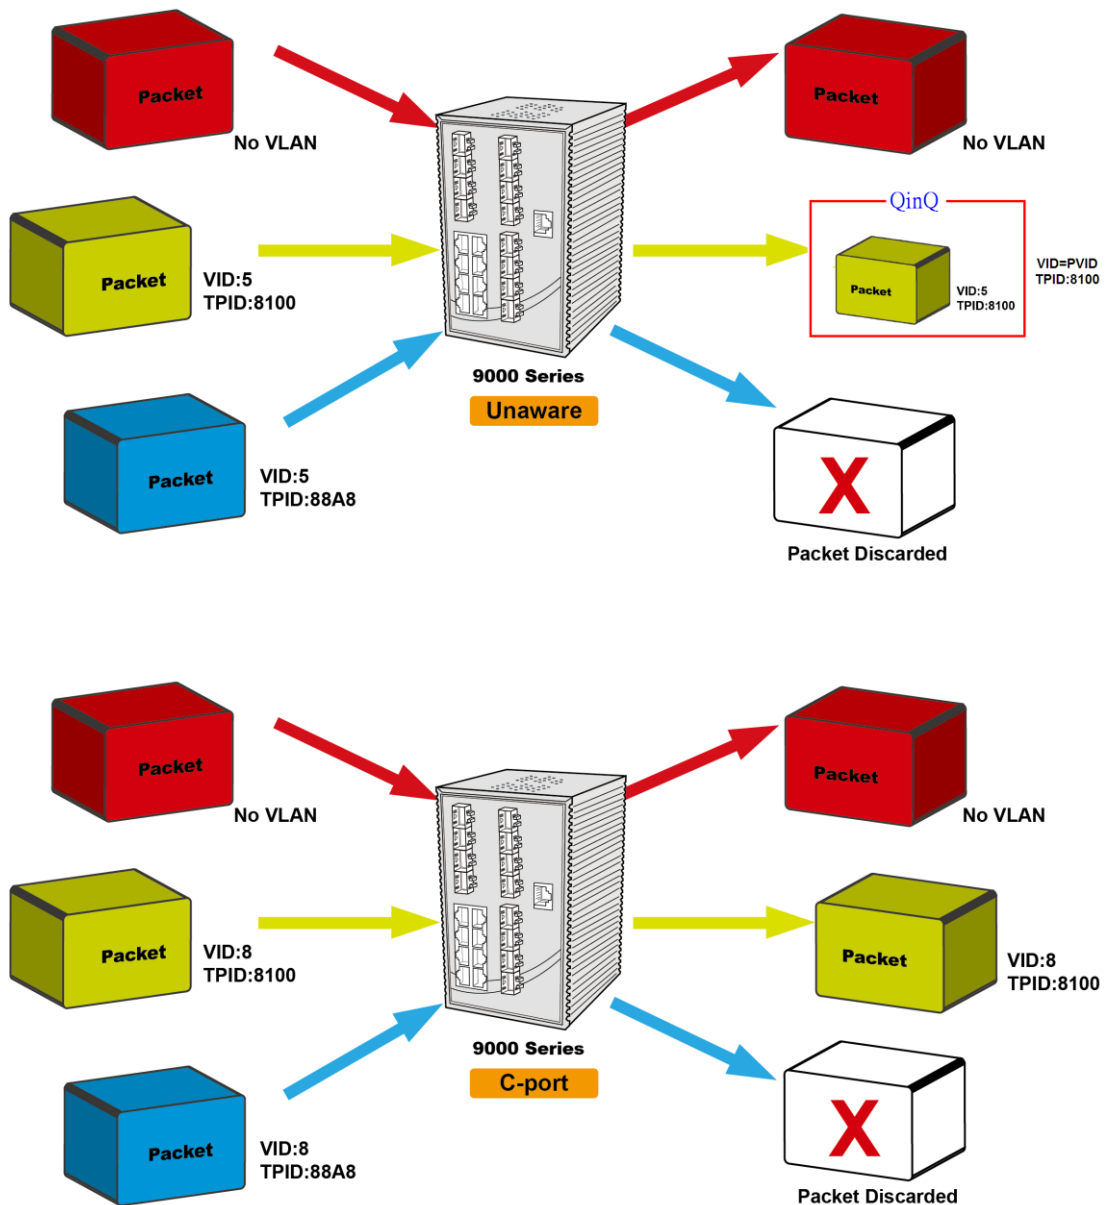

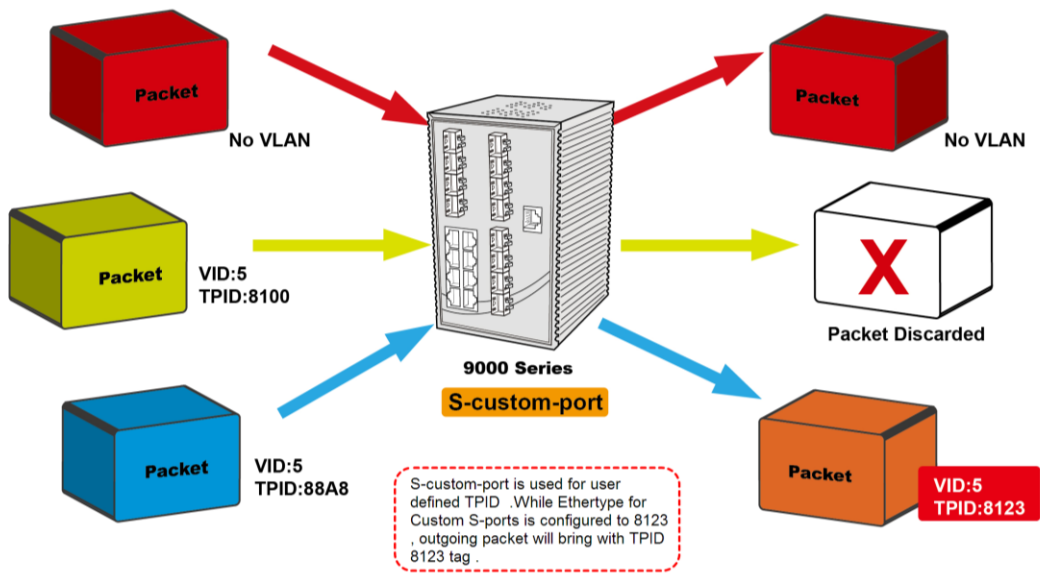

## How is Unaware 、 C-Port 、 S-Port 、 S-Customer Port ?

Port can be one of the following types: Unaware, C-port, S-port, and S-custom-port.

	Ingress action	Egress action
<b>Unaware</b>  <b>The function of Unaware can be used for 802.1QinQ (double tag).</b>	<p>When the port received untagged frames, an untagged frame obtain a tag (based on PVID) and is forwarded.</p> <p>When the port received tagged frames,</p> <ol style="list-style-type: none"> <li>1. if the tagged frame with TPID=0x8100, it become a double-tag frame, and is forwarded.</li> <li>2. if the TPID of tagged frame is not 0x8100 (ex. 0x88A8), it will be discarded.</li> </ol>	<p>The TPID of frame transmitted by Unaware port will be set to 0x8100.</p> <p>The final status of the frame after egressing are also effected by Egress Rule.</p>
<b>C-port</b>	<p>When the port received untagged frames, an untagged frame obtain a tag (based on PVID) and is forwarded.</p> <p>When the port received tagged frames,</p> <ol style="list-style-type: none"> <li>1. if an tagged frame with TPID=0x8100, it is forwarded.</li> <li>2. if the TPID of tagged frame is not 0x8100 (ex. 0x88A8), it will be discarded.</li> </ol>	<p>The TPID of frame transmitted by C-port will be set to 0x8100.</p>
<b>S-port</b>	<p>When the port received untagged frames, an untagged frame obtain a tag (based on PVID) and is forwarded.</p> <p>When the port received tagged frames,</p> <ol style="list-style-type: none"> <li>1. if an tagged frame with TPID=0x88A8, it is forwarded.</li> <li>2. if the TPID of tagged frame is not 0x88A8 (ex. 0x8100), it will be discarded.</li> </ol>	<p>The TPID of frame transmitted by S-port will be set to 0x88A8.</p>

### VLAN Setting Example:

#### VLAN Access Mode Setting :

Like this topology , **Switch A**,  
 Port 7 is VLAN Access mode = Untagged 20  
 Port 8 is VLAN Access mode = Untagged 10

Switch setting as following

- Open all
- System Information
- Front Panel
- Basic Setting
- DHCP Server/Relay
- Port Setting
- Redundancy
- VLAN
  - VLAN Membership
  - Ports
  - Private VLAN
- SNMP
- Traffic Prioritization
- Multicast
- Security
- Warning
- Monitor and Diag
- Synchronization
- PoE

#### VLAN Membership Configuration

Refresh | << >>

**VLAN Management Vlan ID Setting:**

If user setting Management VLAN , only same VLAN ID port , can control switch .

9000 Series VLAN Setting

The screenshot displays the 'IP Configuration' page of a network device. On the left is a navigation menu with options like System Information, Front Panel, Basic Setting, Admin Password, Auth Method, IP Setting, IPv6 Setting, HTTPS, SSH, LLDP, Modbus TCP, Backup, Restore, and Upgrade Firmware. The main content area shows a table with two columns: 'Configured' and 'Current'. The 'VLAN ID' row is highlighted with a red box, indicating the current configuration and its status.

	Configured	Current
DHCP Client	<input type="checkbox"/>	<input type="button" value="Renew"/>
IP Address	192.168.10.2	192.168.10.2
IP Mask	255.255.255.0	255.255.255.0
IP Router	0.0.0.0	0.0.0.0
<b>VLAN ID</b>	<b>1</b>	<b>1</b>
SNTP Server		

Below the table are 'Save' and 'Reset' buttons.

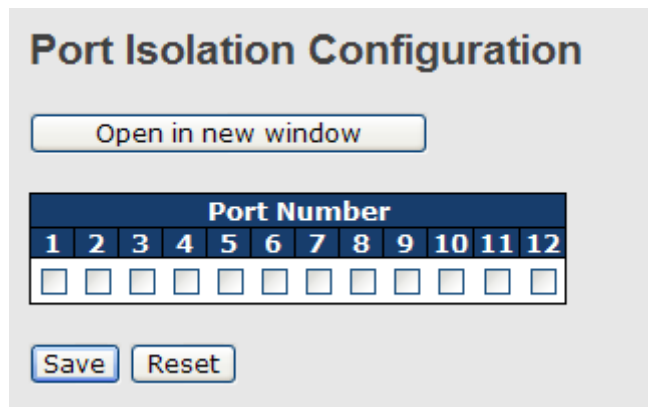

### 5.1.6.3 Private VLAN

The Private VLAN membership configurations for the switch can be monitored and modified here. Private VLANs can be added or deleted here. Port members of each Private VLAN can be added or removed here. Private VLANs are based on the source port mask, and there are no connections to VLANs. This means that VLAN IDs and Private VLAN IDs can be identical. A port must be a member of both a VLAN and a Private VLAN to be able to forward packets. By default, all ports are VLAN unaware and members of VLAN 1 and Private VLAN 1. A VLAN unaware port can only be a member of one VLAN, but it can be a member of multiple Private VLANs.

Label	Description
<b>Delete</b>	Check to delete the entry. It will be deleted during the next save.
<b>Private VLAN ID</b>	Indicates the ID of this particular private VLAN.
<b>MAC Address</b>	The MAC address for the entry.
<b>Port Members</b>	A row of check boxes for each port is displayed for each private VLAN ID. To include a port in a Private VLAN, check the box. To remove or exclude the port from the Private VLAN, make sure the box is unchecked. By default, no ports are members, and all boxes are unchecked.
<b>Adding a New Static Entry</b>	Click  to add a new private VLAN ID. An empty row is added to the table, and the private VLAN can be configured as needed. The allowed range for a private VLAN ID is the same as the switch port number range. Any values outside this range are not accepted, and a warning message appears. Click "OK" to discard the incorrect entry, or click "Cancel" to return to the editing and make a correction. The Private VLAN is enabled when you click "Save".

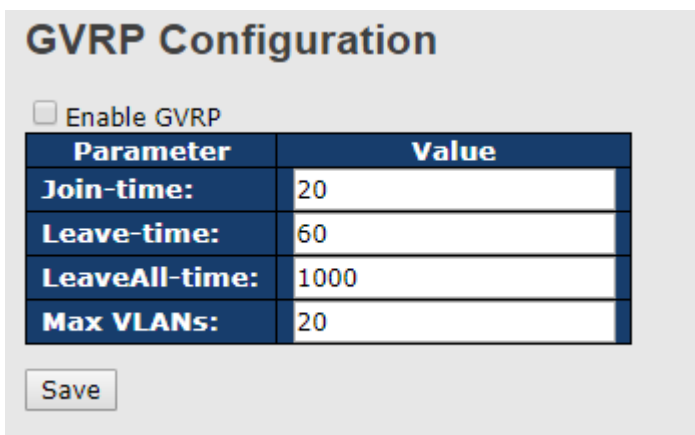

The  button can be used to undo the addition of new Private VLANs.

Label	Description
<b>Port Members</b>	<p>A check box is provided for each port of a private VLAN.</p> <p>When checked, port isolation is enabled for that port.</p> <p>When unchecked, port isolation is disabled for that port.</p> <p>By default, port isolation is disabled for all ports.</p>

### 5.1.6.4 GVRP

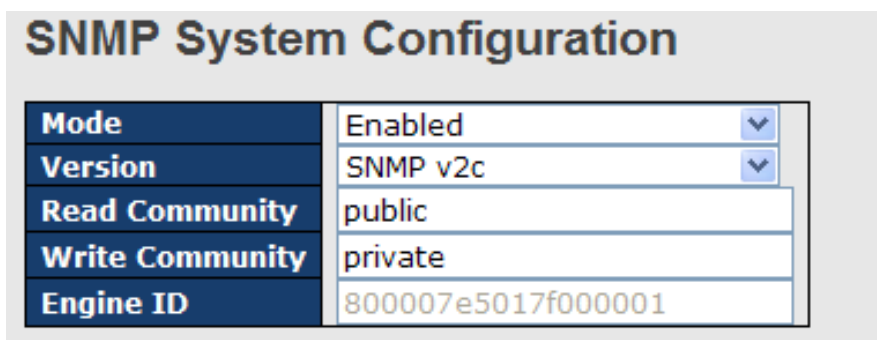

GVRP (GARP VLAN Registration Protocol or Generic VLAN Registration Protocol) is a protocol that facilitates control of virtual local area networks (VLANs) within a larger network . GVRP conforms to the IEEE 802.1Q specification, which defines a method of tagging frames with VLAN configuration data. This allows network devices to dynamically exchange VLAN configuration information with other devices.

Label	Description
<b>GVRP Enable</b>	The GVRP feature is enabled by setting the check mark in the checkbox named Enable GVRP.
<b>Join-time</b>	Join-time is a value in the range 1-20 in the units of centi seconds, i.e. in units of one hundredth of a second. The default is 20.
<b>Leave-time</b>	Leave-time is a value in the range 60-300 in the units of centi seconds, i.e. in units of one hundredth of a second. The default is 60.
<b>LeaveALL-time</b>	LeaveAll-time is a value in the range 1000-5000 in the units of centi seconds, i.e. in units of one hundredth of a second. The default is 1000.
<b>Max VLANs</b>	When GVRP is enabled a maximum number of VLANs supported by GVRP is specified. By default this number is 20. This number can only be changed when GVRP is turned off.

## 5.1.7 SNMP

### 5.1.7.1 SNMP-System

Label	Description
<b>Mode</b>	Indicates the SNMP mode operation. Possible modes are: Enabled: Enable SNMP mode operation. Disabled: Disable SNMP mode operation.
<b>Version</b>	Indicates the SNMP supported version. Possible versions are: SNMP v1: Set SNMP supported version 1. SNMP v2c: Set SNMP supported version 2c. SNMP v3: Set SNMP supported version 3.
<b>Read Community</b>	Indicates the community read access string to permit access to

	SNMP agent. The allowed string length is 0 to 255, and the allowed content is the ASCII characters from 33 to 126. The field only suits to SNMPv1 and SNMPv2c. SNMPv3 is using USM for authentication and privacy and the community string will be associated with SNMPv3 communities table
<b>Write Community</b>	Indicates the community write access string to permit access to SNMP agent. The allowed string length is 0 to 255, and the allowed content is the ASCII characters from 33 to 126. The field only suits to SNMPv1 and SNMPv2c. SNMPv3 is using USM for authentication and privacy and the community string will be associated with SNMPv3 communities table.
<b>Engine ID</b>	Indicates the SNMPv3 engine ID. The string must contain an even number between 10 and 64 hexadecimal digits, but all-zeros and all-F's are not allowed. Change of the Engine ID will clear all original local users.

### SNMP Trap Configuration

<b>Trap Mode</b>	Disabled <span style="float: right;">▼</span>
<b>Trap Version</b>	SNMP v1 <span style="float: right;">▼</span>
<b>Trap Community</b>	public
<b>Trap Destination Address</b>	
<b>Trap Destination IPv6 Address</b>	::
<b>Trap Authentication Failure</b>	Enabled <span style="float: right;">▼</span>
<b>Trap Link-up and Link-down</b>	Enabled <span style="float: right;">▼</span>
<b>Trap Inform Mode</b>	Enabled <span style="float: right;">▼</span>
<b>Trap Inform Timeout (seconds)</b>	1
<b>Trap Inform Retry Times</b>	5

Label	Description
<b>Trap Mode</b>	Indicates the SNMP trap mode operation. Possible modes are: Enabled: Enable SNMP trap mode operation. Disabled: Disable SNMP trap mode operation.
<b>Trap Version</b>	Indicates the SNMP trap supported version. Possible versions are: SNMP v1: Set SNMP trap supported version 1. SNMP v2c: Set SNMP trap supported version 2c. SNMP v3: Set SNMP trap supported version 3.
<b>Trap Community</b>	Indicates the community access string when send SNMP trap packet.

	The allowed string length is 0 to 255, and the allowed content is the ASCII characters from 33 to 126.
<b>Trap Destination Address</b>	Indicates the SNMP trap destination address. Trap Destination IPv6 Address
<b>Trap Destination IPv6 Address</b>	Provide the trap destination IPv6 address of this switch. IPv6 address is in 128-bit records represented as eight fields of up to four hexadecimal digits with a colon separates each field (:). For example, 'fe80:215:c5ff:fe03:4dc7'. The symbol '::' is a special syntax that can be used as a shorthand way of representing multiple 16-bit groups of contiguous zeros; but it can only appear once. It also used a following legally IPv4 address. For example, ':::192.1.2.34'.
<b>Trap Authentication Failure</b>	Indicates the SNMP entity is permitted to generate authentication failure traps. Possible modes are: Enabled: Enable SNMP trap authentication failure. Disabled: Disable SNMP trap authentication failure.
<b>Trap Link-up and Link-down</b>	Indicates the SNMP trap link-up and link-down mode operation. Possible modes are: Enabled: Enable SNMP trap link-up and link-down mode operation. Disabled: Disable SNMP trap link-up and link-down mode operation.
<b>Trap Inform Mode</b>	Indicates the SNMP trap inform mode operation. Possible modes are: Enabled: Enable SNMP trap inform mode operation. Disabled: Disable SNMP trap inform mode operation.
<b>Trap Inform Timeout(seconds)</b>	Indicates the SNMP trap inform timeout. The allowed range is 0 to 2147.
<b>Trap Inform Retry Times</b>	Indicates the SNMP trap inform retry times. The allowed range is 0 to 255.
<b>Trap Probe Security Engine ID</b>	Indicates the SNMP trap probe security engine ID mode of operation. Possible values are: Enabled: Enable SNMP trap probe security engine ID mode of operation. Disabled: Disable SNMP trap probe security engine ID mode of operation.
<b>Trap Security Engine ID</b>	Indicates the SNMP trap security engine ID. SNMPv3 sends traps and informs using USM for authentication and privacy. A unique engine ID for these traps and informs is needed. When "Trap Probe

	Security Engine ID" is enabled, the ID will be probed automatically. Otherwise, the ID specified in this field is used. The string must contain an even number between 10 and 64 hexadecimal digits, but all-zeros and all-F's are not allowed.
<b>Trap Security Name</b>	Indicates the SNMP trap security name. SNMPv3 traps and informs using USM for authentication and privacy. A unique security name is needed when traps and informs are enabled.

### 5.1.7.2 SNMP-Communities

Configure SNMPv3 communities table on this page. The entry index key is Community.

Label	Description
<b>Delete</b>	Check to delete the entry. It will be deleted during the next save.
<b>Community</b>	Indicates the community access string to permit access to SNMPv3 agent. The allowed string length is 1 to 32, and the allowed content is the ASCII characters from 33 to 126.
<b>Source IP</b>	Indicates the SNMP access source address.
<b>Source Mask</b>	Indicates the SNMP access source address mask.

### 5.1.7.3 SNMP-Users

Configure SNMPv3 users table on this page. The entry index keys are Engine ID and User Name.

**SNMPv3 Users Configuration**

Delete	Engine ID	User Name	Security Level	Authentication Protocol	Authentication Password	Privacy Protocol	Privacy Password
<input type="checkbox"/>	800007e5017f000001	default_user	NoAuth, NoPriv	None	None	None	None

Label	Description
<b>Delete</b>	Check to delete the entry. It will be deleted during the next save.
<b>Engine ID</b>	An octet string identifying the engine ID that this entry should belong to. The string must contain an even number between 10 and 64 hexadecimal digits, but all-zeros and all-'F's are not allowed. The SNMPv3 architecture uses the User-based Security Model (USM) for message security and the View-based Access Control Model (VACM) for access control. For the USM entry, the usmUserEngineID and usmUserName are the entry's keys. In a simple agent, usmUserEngineID is always that agent's own snmpEngineID value. The value can also take the value of the snmpEngineID of a remote SNMP engine with which this user can communicate. In other words, if user engine ID equal system engine ID then it is local user; otherwise it's remote user.
<b>User Name</b>	A string identifying the user name that this entry should belong to. The allowed string length is 1 to 32, and the allowed content is the ASCII characters from 33 to 126.
<b>Security Level</b>	Indicates the security model that this entry should belong to. Possible security models are: NoAuth, NoPriv: None authentication and none privacy. Auth, NoPriv: Authentication and none privacy. Auth, Priv: Authentication and privacy. The value of security level cannot be modified if entry already exists. That means must first ensure that the value is set correctly.
<b>Authentication Protocol</b>	Indicates the authentication protocol that this entry should belong to. Possible authentication protocols are: None: None authentication protocol. MD5: An optional flag to indicate that this user using MD5 authentication protocol. SHA: An optional flag to indicate that this user using SHA authentication protocol.

	The value of security level cannot be modified if entry already exists. That means must first ensure that the value is set correctly.
<b>Authentication Password</b>	A string identifying the authentication pass phrase. For MD5 authentication protocol, the allowed string length is 8 to 32. For SHA authentication protocol, the allowed string length is 8 to 40. The allowed content is the ASCII characters from 33 to 126.
<b>Privacy Protocol</b>	Indicates the privacy protocol that this entry should belong to. Possible privacy protocols are: None: None privacy protocol. DES: An optional flag to indicate that this user using DES authentication protocol.
<b>Privacy Password</b>	A string identifying the privacy pass phrase. The allowed string length is 8 to 32, and the allowed content is the ASCII characters from 33 to 126.

### 5.1.7.4 SNMP-Groups

Configure SNMPv3 groups table on this page. The entry index keys are Security Model and Security Name.

#### SNMPv3 Groups Configuration

Delete	Security Model	Security Name	Group Name
<input type="checkbox"/>	v1	public	default_ro_group
<input type="checkbox"/>	v1	private	default_rw_group
<input type="checkbox"/>	v2c	public	default_ro_group
<input type="checkbox"/>	v2c	private	default_rw_group
<input type="checkbox"/>	usm	default_user	default_rw_group

Add new group
Save
Reset

Label	Description
<b>Delete</b>	Check to delete the entry. It will be deleted during the next save.
<b>Security Model</b>	Indicates the security model that this entry should belong to. Possible security models are: v1: Reserved for SNMPv1. v2c: Reserved for SNMPv2c. usm: User-based Security Model (USM).
<b>Security Name</b>	A string identifying the security name that this entry should belong to.

	The allowed string length is 1 to 32, and the allowed content is the ASCII characters from 33 to 126.
<b>Group Name</b>	A string identifying the group name that this entry should belong to. The allowed string length is 1 to 32, and the allowed content is the ASCII characters from 33 to 126.

### 5.1.7.5 SNMP-Views

Configure SNMPv3 views table on this page. The entry index keys are View Name and OID Subtree.

#### SNMPv3 Views Configuration

Delete	View Name	View Type	OID Subtree
<input type="checkbox"/>	default_view	included <span style="font-size: 0.8em;">▼</span>	.1

Add new view
Save
Reset

Label	Description
<b>Delete</b>	Check to delete the entry. It will be deleted during the next save.
<b>View Name</b>	A string identifying the view name that this entry should belong to. The allowed string length is 1 to 32, and the allowed content is the ASCII characters from 33 to 126.
<b>View Type</b>	<p>Indicates the view type that this entry should belong to. Possible view types are:</p> <p>included: An optional flag to indicate that this view subtree should be included.</p> <p>excluded: An optional flag to indicate that this view subtree should be excluded.</p> <p>General, if a view entry's view type is 'excluded', it should be exist another view entry which view type is 'included' and it's OID subtree overstep the 'excluded' view entry.</p>
<b>OID Subtree</b>	The OID defining the root of the subtree to add to the named view. The allowed OID length is 1 to 128. The allowed string content is digital number or asterisk(*).

### 5.1.7.6 SNMP-Accesses

Configure SNMPv3 accesses table on this page. The entry index keys are Group Name, Security Model and Security Level.

### SNMPv3 Accesses Configuration

Delete	Group Name	Security Model	Security Level	Read View Name	Write View Name
<input type="checkbox"/>	default_ro_group	any	NoAuth, NoPriv	default_view	None
<input type="checkbox"/>	default_rw_group	any	NoAuth, NoPriv	default_view	default_view

Label	Description
<b>Delete</b>	Check to delete the entry. It will be deleted during the next save.
<b>Group Name</b>	A string identifying the group name that this entry should belong to. The allowed string length is 1 to 32, and the allowed content is the ASCII characters from 33 to 126.
<b>Security Model</b>	Indicates the security model that this entry should belong to. Possible security models are: any: Accepted any security model (v1 v2c usm). v1: Reserved for SNMPv1. v2c: Reserved for SNMPv2c. usm: User-based Security Model (USM).
<b>Security Level</b>	Indicates the security model that this entry should belong to. Possible security models are: NoAuth, NoPriv: None authentication and none privacy. Auth, NoPriv: Authentication and none privacy. Auth, Priv: Authentication and privacy.
<b>Read View Name</b>	The name of the MIB view defining the MIB objects for which this request may request the current values. The allowed string length is 1 to 32, and the allowed content is the ASCII characters from 33 to 126.
<b>Write View Name</b>	The name of the MIB view defining the MIB objects for which this request may potentially SET new values. The allowed string length is 1 to 32, and the allowed content is the ASCII characters from 33 to 126.

## 5.1.8 Traffic Prioritization

### 5.1.8.1 Storm Control

There is a unicast storm rate control, multicast storm rate control, and a broadcast storm rate

control. These only affect flooded frames, i.e. frames with a (VLAN ID, DMAC) pair not present on the MAC Address table.

The rate is  $2^n$ , where n is equal to or less than 15, or "No Limit". The unit of the rate can be either pps (packets per second) or kpps (kilopackets per second). The configuration indicates the permitted packet rate for unicast, multicast, or broadcast traffic across the switch.

Note: Frames, which are sent to the CPU of the switch are always limited to approximately 4 kpps. For example, broadcasts in the management VLAN are limited to this rate. The management VLAN is configured on the IP setup page.

Frame Type	Status	Rate (pps)
Unicast	<input type="checkbox"/>	1K
Multicast	<input type="checkbox"/>	1K
Broadcast	<input type="checkbox"/>	1K

Save    Reset

Label	Description
<b>Frame Type</b>	The settings in a particular row apply to the frame type listed here: unicast, multicast, or broadcast.
<b>Status</b>	Enable or disable the storm control status for the given frame type.
<b>Rate</b>	The rate unit is packet per second (pps), configure the rate as 1K, 2K, 4K, 8K, 16K, 32K, 64K, 128K, 256K, 512K, or 1024K. The 1 kpps is actually 1002.1 pps.

### 5.1.8.2 Port Classification

QoS is an acronym for Quality of Service. It is a method to guarantee a bandwidth relationship between individual applications or protocols.

#### QoS Ingress Port Classification

Port	QoS class	DP level	PCP	DEI	Tag Class.	DSCP Based
*	<> v	<> v	<> v	<> v		<input type="checkbox"/>
1	0 v	0 v	0 v	0 v	Disabled	<input type="checkbox"/>
2	0 v	0 v	0 v	0 v	Disabled	<input type="checkbox"/>
3	0 v	0 v	0 v	0 v	Disabled	<input type="checkbox"/>
4	0 v	0 v	0 v	0 v	Disabled	<input type="checkbox"/>
5	0 v	0 v	0 v	0 v	Disabled	<input type="checkbox"/>
6	0 v	0 v	0 v	0 v	Disabled	<input type="checkbox"/>
7	0 v	0 v	0 v	0 v	Disabled	<input type="checkbox"/>
8	0 v	0 v	0 v	0 v	Disabled	<input type="checkbox"/>
9	0 v	0 v	0 v	0 v	Disabled	<input type="checkbox"/>
10	0 v	0 v	0 v	0 v	Disabled	<input type="checkbox"/>
11	0 v	0 v	0 v	0 v	Disabled	<input type="checkbox"/>
12	0 v	0 v	0 v	0 v	Disabled	<input type="checkbox"/>

Label	Description
<b>Port</b>	The port number for which the configuration below applies
<b>QoS Class</b>	<p>Controls the default QoS class.</p> <p>All frames are classified to a QoS class. There is a one to one mapping between QoS class, queue and priority. A QoS class of 0 (zero) has the lowest priority.</p> <p>If the port is VLAN aware and the frame is tagged, then the frame is classified to a QoS class that is based on the PCP value in the tag as shown below. Otherwise the frame is classified to the default QoS class.</p> <p>PCP value: 0 1 2 3 4 5 6 7                      QoS class: 1 0 2 3 4 5 6 7</p> <p>If the port is VLAN aware, the frame is tagged and Tag Class. is enabled, then the frame is classified to a QoS class that is</p>

	<p>mapped from the PCP and DEI value in the tag. Otherwise the frame is classified to the default QoS class.</p> <p>The classified QoS class can be overruled by a QCL entry.</p> <p>Note: If the default QoS class has been dynamically changed, then the actual default QoS class is shown in parentheses after the configured default QoS class.</p>
<b>DP level</b>	<p>Controls the default Drop Precedence Level. All frames are classified to a DP level.</p> <p>If the port is VLAN aware and the frame is tagged, then the frame is classified to a DP level that is equal to the DEI value in the tag. Otherwise the frame is classified to the default DP level.</p> <p>If the port is VLAN aware, the frame is tagged and Tag Class. is enabled, then the frame is classified to a DP level that is mapped from the PCP and DEI value in the tag. Otherwise the frame is classified to the default DP level.</p> <p>The classified DP level can be overruled by a QCL entry.</p>
<b>PCP</b>	<p>Controls the default PCP value. All frames are classified to a PCP value.</p> <p>If the port is VLAN aware and the frame is tagged, then the frame is classified to the PCP value in the tag. Otherwise the frame is classified to the default PCP value.</p>
<b>DEI</b>	<p>Controls the default DEI value. All frames are classified to a DEI value.</p> <p>If the port is VLAN aware and the frame is tagged, then the frame is classified to the DEI value in the tag. Otherwise the frame is classified to the default DEI value.</p>

<b>Tag Class</b>	<p>Shows the classification mode for tagged frames on this port.</p> <p>Disabled: Use default QoS class and DP level for tagged frames.</p> <p>Enabled: Use mapped versions of PCP and DEI for tagged frames.</p> <p>Click on the mode in order to configure the mode and/or mapping.</p> <p>Note: This setting has no effect if the port is VLAN unaware. Tagged frames received on VLAN unaware ports are always classified to the default QoS class and DP level.</p>
<b>DSCP Based</b>	Click to Enable DSCP Based QoS Ingress Port Classification.

### 5.1.8.3 Port Tag Remaking

This page provides an overview of QoS Egress Port Tag Remarking for all switch ports.

#### QoS Egress Port Tag Remarking

10	<input type="checkbox"/>	Disable ▾	Disable ▾
11	<input type="checkbox"/>	Disable ▾	Disable ▾
12	<input type="checkbox"/>	Disable ▾	Disable ▾

Label	Description
<b>Port</b>	The Port column shows the list of ports for which you can configure dscp ingress and egress settings.
<b>Ingress</b>	In Ingress settings you can change ingress translation and classification settings for individual ports. There are two configuration parameters available in Ingress:
<b>1. Translate</b>	To Enable the Ingress Translation click the checkbox.
<b>2. Classify</b>	Classification for a port have 4 different values. <ul style="list-style-type: none"> <li>• Disable: No Ingress DSCP Classification.</li> <li>• DSCP=0: Classify if incoming (or translated if enabled) DSCP is 0.</li> <li>• Selected: Classify only selected DSCP for which classification is enabled as specified in DSCP Translation window for the specific DSCP.</li> </ul>

	<ul style="list-style-type: none"> <li>• All: Classify all DSCP.</li> </ul>
<b>Egress</b>	<p>Port Egress Rewriting can be one of -</p> <ul style="list-style-type: none"> <li>• Disable: No Egress rewrite.</li> <li>• Enable: Rewrite enabled without remapping.</li> <li>• Remap DP Unaware: DSCP from analyzer is remapped and frame is remarked with remapped DSCP value. The remapped DSCP value is always taken from the 'DSCP Translation-&gt;Egress Remap DP0' table.</li> <li>• Remap DP Aware: DSCP from analyzer is remapped and frame is remarked with remapped DSCP value. Depending on the DP level of the frame, the remapped DSCP value is either taken from the 'DSCP Translation-&gt;Egress Remap DP0' table or from the 'DSCP Translation-&gt;Egress Remap DP1' table.</li> </ul>

### 5.1.8.5 Port Policing

This page allows you to configure the Policer settings for all switch ports.

#### QoS Ingress Port Policers

Port	Enabled	Rate	Unit	Flow Control
*	<input type="checkbox"/>	500	<> ▾	<input type="checkbox"/>
1	<input type="checkbox"/>	500	kbps ▾	<input type="checkbox"/>
2	<input type="checkbox"/>	500	kbps ▾	<input type="checkbox"/>
3	<input type="checkbox"/>	500	kbps ▾	<input type="checkbox"/>
4	<input type="checkbox"/>	500	kbps ▾	<input type="checkbox"/>
5	<input type="checkbox"/>	500	kbps ▾	<input type="checkbox"/>
6	<input type="checkbox"/>	500	kbps ▾	<input type="checkbox"/>
7	<input type="checkbox"/>	500	kbps ▾	<input type="checkbox"/>
8	<input type="checkbox"/>	500	kbps ▾	<input type="checkbox"/>
9	<input type="checkbox"/>	500	kbps ▾	<input type="checkbox"/>
10	<input type="checkbox"/>	500	kbps ▾	<input type="checkbox"/>
11	<input type="checkbox"/>	500	kbps ▾	<input type="checkbox"/>
12	<input type="checkbox"/>	500	kbps ▾	<input type="checkbox"/>

Label	Description
<b>Port</b>	The port number for which the configuration below applies
<b>Enable</b>	Controls whether the policer is enabled on this switch port.
<b>Rate</b>	Controls the rate for the policer. The default value is 500. This value is restricted to 100-1000000 when the "Unit" is "kbps" or "fps", and it is restricted to 1-3300 when the "Unit" is "Mbps" or "kfps".
<b>Unit</b>	Controls the unit of measure for the policer rate as kbps, Mbps, fps or kfps . The default value is "kbps".
<b>Flow Control</b>	If flow control is enabled and the port is in flow control mode, then pause frames are sent instead of discarding frames.

### 5.1.8.6 Queue Policing

This page allows you to configure the Queue Policer settings for all switch ports.

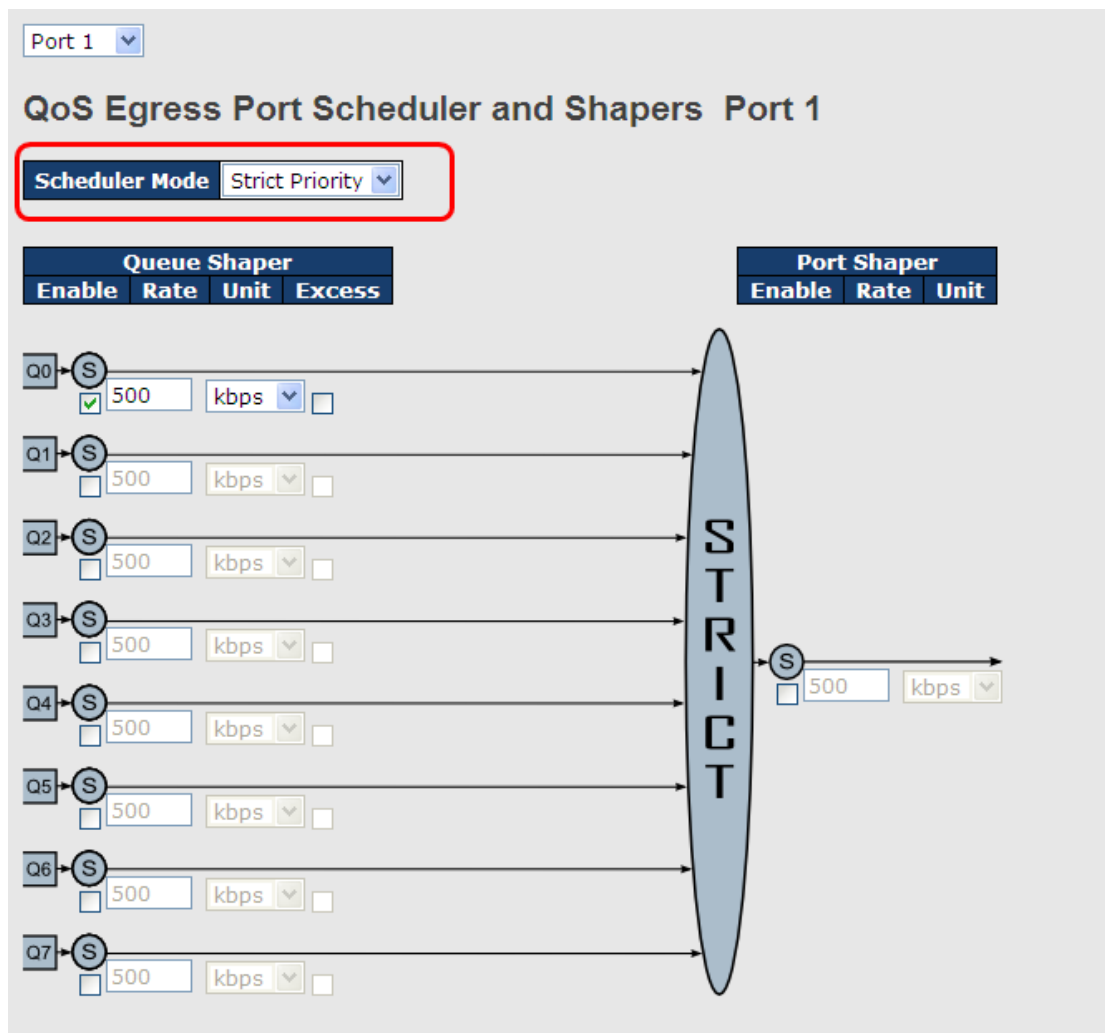

QoS Ingress Queue Policers										
Port	Queue 0			Queue 1	Queue 2	Queue 3	Queue 4	Queue 5	Queue 6	Queue 7
	E	Rate	Unit	Enable	Enable	Enable	Enable	Enable	Enable	Enable
*	<input checked="" type="checkbox"/>	500	<>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1	<input checked="" type="checkbox"/>	500	kbps	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2	<input checked="" type="checkbox"/>	500	kbps	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3	<input checked="" type="checkbox"/>	500	kbps	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4	<input checked="" type="checkbox"/>	500	kbps	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5	<input checked="" type="checkbox"/>	500	kbps	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Label	Description
<b>Port</b>	The port number for which the configuration below applies.
<b>Enable(E)</b>	Controls whether the queue policer is enabled on this switch port.
<b>Rate</b>	Controls the rate for the queue policer. The default value is 500. This value is restricted to 100-1000000 when the "Unit" is "kbps", and it is restricted to 1-3300 when the "Unit" is "Mbps".  This field is only shown if at least one of the queue policers are enabled.
<b>Unit</b>	Controls the unit of measure for the queue policer rate as kbps or Mbps. The default value is "kbps".  This field is only shown if at least one of the queue policers are enabled.

### 5.1.8.7 QoS Egress Port Scheduler and Shapers

This page allows you to configure the Scheduler and Shapers for a specific port.

#### Strict Priority

Label	Description
<b>Scheduler Mode</b>	Controls whether the scheduler mode is "Strict Priority" or "Weighted" on this switch port.
<b>Queue Shaper Enable</b>	Controls whether the queue shaper is enabled for this queue on this switch port.
<b>Queue Shaper Rate</b>	Controls the rate for the queue shaper. The default value is 500. This value is restricted to 100-1000000 when the "Unit" is "kbps", and it is restricted to 1-3300 when the "Unit" is "Mbps".
<b>Queues Shaper Unit</b>	Controls the rate for the queue shaper. The default value is 500.

	This value is restricted to 100-1000000 when the "Unit" is "kbps", and it is restricted to 1-3300 when the "Unit" is "Mbps".
<b>Queue Shaper Excess</b>	Controls whether the queue is allowed to use excess bandwidth.
<b>Port Shaper Enable</b>	Controls whether the port shaper is enabled for this switch port.
<b>Port Shaper Rate</b>	Controls the rate for the port shaper. The default value is 500. This value is restricted to 100-1000000 when the "Unit" is "kbps", and it is restricted to 1-3300 when the "Unit" is "Mbps".
<b>Port Shaper Unit</b>	Controls the unit of measure for the port shaper rate as "kbps" or "Mbps". The default value is "kbps".

### Weighted

Port 1

#### QoS Egress Port Scheduler and Shapers Port 1

Scheduler Mode: **Weighted**

Queue Shaper				Queue Scheduler		Port Shaper		
Enable	Rate	Unit	Excess	Weight	Percent	Enable	Rate	Unit
<input type="checkbox"/>	500	kbps	<input type="checkbox"/>	17	17%	<input type="checkbox"/>	500	kbps
<input type="checkbox"/>	500	kbps	<input type="checkbox"/>	17	17%	<input type="checkbox"/>	500	kbps
<input type="checkbox"/>	500	kbps	<input type="checkbox"/>	17	17%	<input type="checkbox"/>	500	kbps
<input type="checkbox"/>	500	kbps	<input type="checkbox"/>	17	17%	<input type="checkbox"/>	500	kbps
<input type="checkbox"/>	500	kbps	<input type="checkbox"/>	17	17%	<input type="checkbox"/>	500	kbps
<input type="checkbox"/>	500	kbps	<input type="checkbox"/>	17	17%	<input type="checkbox"/>	500	kbps
<input type="checkbox"/>	500	kbps	<input type="checkbox"/>	17	17%	<input type="checkbox"/>	500	kbps
<input type="checkbox"/>	500	kbps	<input type="checkbox"/>	17	17%	<input type="checkbox"/>	500	kbps

The diagram illustrates the QoS configuration for Port 1. It shows eight queues (Q0-Q7) feeding into a DRR (Dual Rate Round Robin) scheduler. The scheduler is configured with a weight of 17 and a percent of 17% for each queue. The output of the scheduler goes through a STRICT shaper, which then feeds into a port shaper. The port shaper is configured with a rate of 500 kbps. The Scheduler Mode is set to Weighted.

Label	Description
<b>Scheduler Mode</b>	Controls whether the scheduler mode is "Strict Priority" or "Weighted" on this switch port.
<b>Queue Shaper Enable</b>	Controls whether the queue shaper is enabled for this queue on this switch port.
<b>Queue Shaper Rate</b>	Controls the rate for the queue shaper. The default value is 500. This value is restricted to 100-1000000 when the "Unit" is "kbps", and it is restricted to 1-3300 when the "Unit" is "Mbps".
<b>Queues Shaper Unit</b>	Controls the rate for the queue shaper. The default value is 500. This value is restricted to 100-1000000 when the "Unit" is "kbps", and it is restricted to 1-3300 when the "Unit" is "Mbps".
<b>Queue Shaper Excess</b>	Controls whether the queue is allowed to use excess bandwidth.
<b>Queue Scheduler Weight</b>	Controls the weight for this queue. The default value is "17". This value is restricted to 1-100. This parameter is only shown if "Scheduler Mode" is set to "Weighted".
<b>Queue Scheduler Percent</b>	Shows the weight in percent for this queue. This parameter is only shown if "Scheduler Mode" is set to "Weighted".
<b>Port Shaper Enable</b>	Controls whether the port shaper is enabled for this switch port.
<b>Port Shaper Rate</b>	Controls the rate for the port shaper. The default value is 500. This value is restricted to 100-1000000 when the "Unit" is "kbps", and it is restricted to 1-3300 when the "Unit" is "Mbps".
<b>Port Shaper Unit</b>	Controls the unit of measure for the port shaper rate as "kbps" or "Mbps". The default value is "kbps".

### 5.1.8.8 Port Schedulet

This page provides an overview of QoS Egress Port Schedulers for all switch ports.

Port	Mode	Weight					
		Q0	Q1	Q2	Q3	Q4	Q5
1	Strict Priority	-	-	-	-	-	-
2	Strict Priority	-	-	-	-	-	-
3	Strict Priority	-	-	-	-	-	-
4	Strict Priority	-	-	-	-	-	-
5	Strict Priority	-	-	-	-	-	-
6	Strict Priority	-	-	-	-	-	-

Label	Description
<b>Port</b>	The logical port for the settings contained in the same row. Click on the port number in order to configure the schedulers.
<b>Mode</b>	Shows the scheduling mode for this port.
<b>Qn</b>	Shows the weight for this queue and port.

### 5.1.8.9 Port Shaping

This page provides an overview of QoS Egress Port Shapers for all switch ports.

#### QoS Egress Port Shapers

Port	Shapers								Port	
	Q0	Q1	Q2	Q3	Q4	Q5	Q6	Q7		
1	disabled	disabled	disabled	disabled	disabled	disabled	disabled	disabled	disabled	disabled
2	disabled	disabled	disabled	disabled	disabled	disabled	disabled	disabled	disabled	disabled
3	disabled	disabled	disabled	disabled	disabled	disabled	disabled	disabled	disabled	disabled
4	disabled	disabled	disabled	disabled	disabled	disabled	disabled	disabled	disabled	disabled
5	disabled	disabled	disabled	disabled	disabled	disabled	disabled	disabled	disabled	disabled
6	disabled	disabled	disabled	disabled	disabled	disabled	disabled	disabled	disabled	disabled

Label	Description
<b>Port</b>	The logical port for the settings contained in the same row. Click on the port number in order to configure the shapers.
<b>Mode</b>	Shows "disabled" or actual queue shaper rate - e.g. "800 Mbps".
<b>Qn</b>	Shows "disabled" or actual port shaper rate - e.g. "800 Mbps".

### 5.1.8.10 DSCP Based QoS

This page allows you to configure the basic QoS DSCP based QoS Ingress Classification settings for all switches.

#### DSCP-Based QoS Ingress Classification

DSCP	Trust	QoS Class	DPL
*	<input type="checkbox"/>	<input type="text" value="&lt;&gt;"/> ▾	<input type="text" value="&lt;&gt;"/> ▾
0 (BE)	<input type="checkbox"/>	<input type="text" value="0"/> ▾	<input type="text" value="0"/> ▾
1	<input type="checkbox"/>	<input type="text" value="0"/> ▾	<input type="text" value="0"/> ▾
2	<input type="checkbox"/>	<input type="text" value="0"/> ▾	<input type="text" value="0"/> ▾
3	<input type="checkbox"/>	<input type="text" value="0"/> ▾	<input type="text" value="0"/> ▾
4	<input type="checkbox"/>	<input type="text" value="0"/> ▾	<input type="text" value="0"/> ▾
5	<input type="checkbox"/>	<input type="text" value="0"/> ▾	<input type="text" value="0"/> ▾

Label	Description
<b>DSCP</b>	Maximum number of supported DSCP values are 64..
<b>Trust</b>	Controls whether a specific DSCP value is trusted. Only frames with trusted DSCP values are mapped to a specific QoS class and Drop Precedence Level. Frames with untrusted DSCP values are treated as a non-IP frame.
<b>QoS Class</b>	QoS class value can be any of (0-7)
<b>DPL</b>	Drop Precedence Level (0-1)

### 5.1.8.11 DSCP Translation

This page allows you to configure the basic QoS DSCP Translation settings for all switches.

DSCP translation can be done in Ingress or Egress.

DSCP Translation				
DSCP	Ingress		Egress	
	Translate	Classify	Remap DP0	Remap DP1
*	<> ▾	<input type="checkbox"/>	<> ▾	<> ▾
0 (BE)	0 (BE) ▾	<input type="checkbox"/>	0 (BE) ▾	0 (BE) ▾
1	1 ▾	<input type="checkbox"/>	1 ▾	1 ▾
2	2 ▾	<input type="checkbox"/>	2 ▾	2 ▾
3	3 ▾	<input type="checkbox"/>	3 ▾	3 ▾
4	4 ▾	<input type="checkbox"/>	4 ▾	4 ▾
5	5 ▾	<input type="checkbox"/>	5 ▾	5 ▾
6	6 ▾	<input type="checkbox"/>	6 ▾	6 ▾
7	7 ▾	<input type="checkbox"/>	7 ▾	7 ▾
8 (CS1)	8 (CS1) ▾	<input type="checkbox"/>	8 (CS1) ▾	8 (CS1) ▾
9	9 ▾	<input type="checkbox"/>	9 ▾	9 ▾

Label	Description
<b>DSCP</b>	Maximum number of supported DSCP values are 64 and valid DSCP value ranges from 0 to 63.
<b>Ingress</b>	Ingress side DSCP can be first translated to new DSCP before using the DSCP for QoS class and DPL map. There are two configuration parameters for DSCP Translation - 1. Translate 2. Classify
<b>1. Translate</b>	DSCP at Ingress side can be translated to any of (0-63) DSCP

	values.
<b>2.Classify</b>	Click to enable Classification at Ingress side.
<b>Egress</b>	There are the following configurable parameters for Egress side – 1. Remap DP0 Controls the remapping for frames with DP level 0. 2. Remap DP1 Controls the remapping for frames with DP level 1.
<b>1.Remap DP0</b>	Select the DSCP value from select menu to which you want to remap. DSCP value ranges form 0 to 63.
<b>2.Remap DP1</b>	Select the DSCP value from select menu to which you want to remap. DSCP value ranges form 0 to 63.

### 5.1.8.12 DSCP Classification

This page allows you to configure the mapping of QoS class and Drop Precedence Level to DSCP value.

QoS Class	DPL	DSCP
∞	∞	<>
0	0	0 (BE)
0	1	8 (CS1)
1	0	14 (AF13)
1	1	0 (BE)
2	0	0 (BE)

Label	Description
<b>QoS Class</b>	Actual QoS class
<b>DPL</b>	Actual Drop Precedence Level.
<b>DSCP</b>	Select the classified DSCP value (0-63).

### 5.1.8.13 QoS Control List

This page allows to edit/insert a single QoS Control Entry at a time. A QCE consists of several parameters. These parameters vary according to the frame type that you select.

#### QCE Configuration

Port Members																			
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

#### Key Parameters

Tag	Tag	<input type="text"/>
VID	Specific	Value: <input type="text"/>
PCP	2	
DEI	0	
SMAC	Specific	0x00-00-00
DMAC Type	UC	
Frame Type	Ethernet	

#### Action Parameters

Class	3
DPL	1
DSCP	28 (AF32)

#### MAC Parameters

Ether Type	Specific	Value: 0xFFFF
------------	----------	---------------

Label	Description
<b>Port Members</b>	Check the checkbox button to include the port in the QCL entry. By default all ports are included.
<b>Key Parameters</b>	<p>Key configuration is described as below:</p> <p><b>Tag</b> Value of Tag field can be 'Any', 'Untag' or 'Tag'.</p> <p><b>VID</b> Valid value of VLAN ID can be any value in the range 1-4095 or 'Any'; user can enter either a specific value or a range of VLANs.</p> <p><b>PCP</b> Priority Code Point: Valid value PCP are specific(0, 1, 2, 3, 4, 5, 6, 7) or range(0-1, 2-3, 4-5, 6-7, 0-3, 4-7) or 'Any'.</p> <p><b>DEI</b> Drop Eligible Indicator: Valid value of DEI can be any of values between 0, 1 or 'Any'.</p> <p><b>SMAC</b> Source MAC address: 24 MS bits (OUI) or 'Any'.</p> <p><b>DMAC Type</b> Destination MAC type: possible values are unicast(UC), multicast(MC), broadcast(BC) or 'Any'.</p> <p><b>Frame Type</b> Frame Type can have any of the following values:</p>

	<ol style="list-style-type: none"> <li>1. Any</li> <li>2. Ethernet</li> <li>3. LLC</li> <li>4. SNAP</li> <li>5. IPv4</li> <li>6. IPv6</li> </ol> <p>Note: All frame types are explained below.</p>
<b>1.Any</b>	Allow all types of frames.
<b>2. Ethernet</b>	Ethernet Type Valid ethernet type can have a value within 0x600-0xFFFF or 'Any' but excluding 0x800(IPv4) and 0x86DD(IPv6), default value is 'Any'.
<b>3.LLC</b>	<p>SSAP Address Valid SSAP(Source Service Access Point) can vary from 0x00 to 0xFF or 'Any', the default value is 'Any'.</p> <p>DSAP Address Valid DSAP(Destination Service Access Point) can vary from 0x00 to 0xFF or 'Any', the default value is 'Any'.</p> <p>Control Valid Control field can vary from 0x00 to 0xFF or 'Any', the default value is 'Any'.</p>
<b>4.SNAP</b>	PID Valid PID(a.k.a ethernet type) can have value within 0x00-0xFFFF or 'Any', default value is 'Any'.
<b>5.IPv4</b>	<p>Protocol IP protocol number: (0-255, TCP or UDP) or 'Any'.</p> <p>Source IP Specific Source IP address in value/mask format or 'Any'. IP and Mask are in the format x.y.z.w where x, y, z, and w are decimal numbers between 0 and 255. When Mask is converted to a 32-bit binary string and read from left to right, all bits following the first zero must also be zero.</p> <p>DSCP Diffserv Code Point value (DSCP): It can be a specific value, range of values or 'Any'. DSCP values are in the range 0-63 including BE, CS1-CS7, EF or AF11-AF43.</p> <p>IP Fragment Ipv4 frame fragmented option: yes no any.</p> <p>Sport Source TCP/UDP port(0-65535) or 'Any', specific or port range applicable for IP protocol UDP/TCP.</p> <p>Dport Destination TCP/UDP port(0-65535) or 'Any', specific or port range applicable for IP protocol UDP/TCP</p>
<b>6.IPv6</b>	<p>Protocol IP protocol number: (0-255, TCP or UDP) or 'Any'.</p> <p>Source IP IPv6 source address: (a.b.c.d) or 'Any', 32 LS bits.</p> <p>DSCP Diffserv Code Point value (DSCP): It can be a specific</p>

	<p>value, range of values or 'Any'. DSCP values are in the range 0-63 including BE, CS1-CS7, EF or AF11-AF43.</p> <p>Sport Source TCP/UDP port:(0-65535) or 'Any', specific or port range applicable for IP protocol UDP/TCP.</p> <p>Dport Destination TCP/UDP port:(0-65535) or 'Any', specific or port range applicable for IP protocol UDP/TCP.</p>
<b>Action Parameters</b>	<p>Class QoS class: (0-7) or 'Default'.</p> <p>DP Valid Drop Precedence Level can be (0-1) or 'Default'.</p> <p>DSCP Valid DSCP value can be (0-63, BE, CS1-CS7, EF or AF11-AF43) or 'Default'.</p> <p>'Default' means that the default classified value is not modified by this QCE.</p>

### 5.1.8.14 QoS Counters

This page provides statistics for the different queues for all switch ports.

#### Queuing Counters

Auto-refresh

Port	Q0		Q1		Q2		Q3		Q4		Q5		Q6		Q7	
	Rx	Tx	Rx	Tx	Rx	Tx	Rx	Tx	Rx	Tx	Rx	Tx	Rx	Tx	Rx	Tx
1	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
2	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
3	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
4	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
5	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
6	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
7	586	0	0	0	0	0	0	0	0	0	0	0	0	0	0	493
8	1307	0	0	0	0	0	0	0	0	0	0	0	0	0	0	2326
9	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0

Label	Description
<b>Port</b>	The logical port for the settings contained in the same row.
<b>Qn</b>	There are 8 QoS queues per port. Q0 is the lowest priority queue.
<b>Rx / Tx</b>	The number of received and transmitted packets per queue.

### 5.1.8.15 QCL Status

This page shows the QCL status by different QCL users. Each row describes the QCE that is defined. It is a conflict if a specific QCE is not applied to the hardware due to hardware limitations. The maximum number of QCEs is 256 on each switch.

Combined 
Auto-refresh

## QoS Control List Status

User	QCE#	Frame Type	Port	Action			Conflict
				Class	DPL	DSCP	
No entries							

Label	Description
<b>User</b>	Indicates the QCL user.
<b>QCE#</b>	Indicates the index of QCE.
<b>Frame Type</b>	Indicates the type of frame to look for incoming frames. Possible frame types are: Any: The QCE will match all frame type. Ethernet: Only Ethernet frames (with Ether Type 0x600-0xFFFF) are allowed. LLC: Only (LLC) frames are allowed. SNAP: Only (SNAP) frames are allowed. IPv4: The QCE will match only IPV4 frames. IPv6: The QCE will match only IPV6 frames.
<b>Port</b>	Indicates the list of ports configured with the QCE.
<b>Action</b>	Indicates the classification action taken on ingress frame if parameters configured are matched with the frame's content. There are three action fields: Class, DPL and DSCP. Class: Classified QoS class; if a frame matches the QCE it will be put in the queue. DPL: Drop Precedence Level; if a frame matches the QCE then DP level will set to value displayed under DPL column. DSCP: If a frame matches the QCE then DSCP will be classified with the value displayed under DSCP column.
<b>Conflict</b>	Displays Conflict status of QCL entries. As H/W resources are shared by multiple applications. It may happen that resources

	required to add a QCE may not be available, in that case it shows conflict status as 'Yes', otherwise it is always 'No'. Please note that conflict can be resolved by releasing the H/W resources required to add QCL entry on pressing 'Resolve Conflict' button.

## 5.1.9 Multicast

### 5.1.9.1 IGMP Snooping

This page provides IGMP Snooping related configuration.

**IGMP Snooping Configuration**

**Global Configuration**

Snooping Enabled

Unregistered IPMCv4 Flooding Enabled

**Port Related Configuration**

Port	Router Port	Fast Leave
*	<input type="checkbox"/>	<input type="checkbox"/>
1	<input type="checkbox"/>	<input type="checkbox"/>
2	<input type="checkbox"/>	<input type="checkbox"/>
3	<input type="checkbox"/>	<input type="checkbox"/>
4	<input type="checkbox"/>	<input type="checkbox"/>
5	<input type="checkbox"/>	<input type="checkbox"/>
6	<input type="checkbox"/>	<input type="checkbox"/>

Label	Description
<b>Snooping Enabled</b>	Enable the Global IGMP Snooping.
<b>Unregistered IPMCv4 Flooding enabled</b>	Enable unregistered IPMC traffic flooding.
<b>Router Port</b>	Specify which ports act as router ports. A router port is a port on the Ethernet switch that leads towards the Layer 3 multicast device or IGMP querier. If an aggregation member port is selected as a router port, the whole aggregation will act as a router port.
<b>Fast Leave</b>	Enable the fast leave on the port.

### 5.1.9.2 IGMP Snooping- VLAN Configuration-

Each page shows up to 99 entries from the VLAN table, default being 20, selected through the "entries per page" input field. When first visited, the web page will show the first 20 entries from the beginning of the VLAN Table. The first displayed will be the one with the lowest VLAN ID found in the VLAN Table.

The "VLAN" input fields allow the user to select the starting point in the VLAN Table. Clicking the  button will update the displayed table starting from that or the next closest VLAN Table match.

The  will use the last entry of the currently displayed entry as a basis for the next lookup. When the end is reached the text "No more entries" is shown in the displayed table.

Use the  button to start over.

Label	Description
<b>Delete</b>	Check to delete the entry. The designated entry will be deleted during the next save.
<b>VLAN ID</b>	The VLAN ID of the entry.
<b>IGMP Snooping Enable</b>	Enable the per-VLAN IGMP Snooping. Up to 32 VLANs can be selected for IGMP Snooping.
<b>IGMP Querier</b>	Enable the IGMP Querier in the VLAN.

### 5.1.9.3 IGMP Snooping Status

This page provides IGMP Snooping status.

Auto-refresh

#### IGMP Snooping Status

Statistics

VLAN ID	Querier Version	Host Version	Querier Status	Queries Transmitted	Queries Received	V1 Reports Received	V2 Reports Received	V3 Reports Received	V2 Leaves Received
1	v3	v3	DISABLE	0	0	0	0	0	0

Router Port

Port	Status
1	-
2	-
3	-
4	-
5	-
6	-

Label	Description
<b>VLAN ID</b>	The VLAN ID of the entry.
<b>Querier Version</b>	Working Querier Version currently.
<b>Host Version</b>	Working Host Version currently.
<b>Querier Status</b>	Show the Querier status is "ACTIVE" or "IDLE".
<b>Querier Receive</b>	The number of Transmitted Querier.
<b>V1 Reports Receive</b>	The number of Received V1 Reports.
<b>V2 Reports Receive</b>	The number of Received V2 Reports.
<b>V3 Reports Receive</b>	The number of Received V3 Reports.
<b>V2 Leave Receive</b>	The number of Received V2 Leave.
<input type="button" value="Refresh"/>	Click to refresh the page immediately.
<input type="button" value="Clear"/>	Clears all Statistics counters.
Auto-refresh <input type="checkbox"/>	Check this box to enable an automatic refresh of the page at regular intervals.
<b>Port</b>	Switch Port number
<b>Status</b>	Indicate whether specific port is a router port or not .

### 5.1.9.4 IGMP Snooping Groups Information

Entries in the IGMP Group Table are shown on this page. The IGMP Group Table is sorted first by VLAN ID, and then by group.

#### IGMP Snooping Group Information

Auto-refresh  Refresh | << >>

Start from VLAN  and group address  with  entries per page.

	Port Members																				
VLAN ID	Groups	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20
No more entries																					

Label	Description
<b>VLAN ID</b>	VLAN ID of the group.
<b>Groups</b>	Group address of the group displayed.
<b>Port Members</b>	Ports under this group..

### 5.1.10 Security

#### 5.1.10.1 Remote Control Security Configuration

Remote Control Security allows you limit the remote access of management interface. When enabled, the request of client which is not in the allow list will be rejected.

#### Remote Control Security Configuration

Mode

Delete	Port	IP	Web	Telnet	SNMP
<input type="button" value="Delete"/>	<input type="text" value="Any"/>	<input type="text" value="0.0.0.0"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Label	Description
<b>Port</b>	Port number of remote client.

<b>IP Address</b>	IP address of remote client. Keeps this field "0.0.0.0" means "Any IP".
<b>Web</b>	Check this item to enable Web management interface.
<b>Telnet</b>	Check this item to enable Telnet management interface.
<b>SNMP</b>	Check this item to enable SNMP management interface
<b>Delete</b>	Check this item to delete.

### 5.1.10.2 Device Binding

This page provides Device Binding related configuration. Device Binding is an powerful monitor for devices and network security.

**Device Binding**

Function State: Enable

Port	Mode	Alive Check		Stream Check		DDOS Prevention		Device	
		Active	Status	Active	Status	Active	Status	IP Address	MAC Address
1	Scan	<input type="checkbox"/>	---	<input type="checkbox"/>	---	<input type="checkbox"/>	---	0.0.0.0	00-00-00-00-
2	Binding	<input type="checkbox"/>	---	<input type="checkbox"/>	---	<input type="checkbox"/>	---	0.0.0.0	00-00-00-00-
3	Shutdown	<input type="checkbox"/>	---	<input type="checkbox"/>	---	<input type="checkbox"/>	---	0.0.0.0	00-00-00-00-
4	---	<input type="checkbox"/>	---	<input type="checkbox"/>	---	<input type="checkbox"/>	---	0.0.0.0	00-00-00-00-
5	---	<input type="checkbox"/>	---	<input type="checkbox"/>	---	<input type="checkbox"/>	---	0.0.0.0	00-00-00-00-

Label	Description
<b>Mode</b>	<p>Indicates the per-port Device Binding operation. Possible modes are:</p> <p>---: Disable.</p> <p>Scan: Scan IP/MAC automatically, but no binding function.</p> <p>Binding: Enable binding function. Under this mode, any IP/MAC doesn't match the entry will not be allowed to access the network.</p> <p>Shutdown: Shutdown the port (No Link).</p>
<b>Alive Check Active</b>	<p>Enable/Disable Alive Check. When enabled, switch will ping the device continually.</p>
<b>Alive Check Satus</b>	<p>Indicates the Alive Check status. Possible statuses are:</p> <p>---: Disable.</p> <p>Got Reply: Got ping reply from device, that means the device is still alive.</p> <p>Lost Reply: Lost ping reply from device, that means the device might have been hanged.</p>
<b>Stream Check</b>	<p>Enable/Disable Stream Check. When enabled, switch will detect the</p>

<b>Active</b>	stream change(getting low) from device.
<b>Stream Check Status</b>	Indicates the Stream Check status. Possible statuses are: ---: Disable. Normal: The stream is normal. Low: The stream is getting low.
<b>DDoS Prevention Acton</b>	Enable/Disable DDOS Prevention. When enabled, switch will monitor the device to against DDOS attack (from device).
<b>DDoS Prevention Status</b>	Indicates the DDOS Prevention status. Possible statuses are: ---: Disable. Analysing: Analyse the packet throughput for initialization. Running: Function ready. Attacked: DDOS attack happened.
<b>Device IP Address</b>	Specify the IP Address of device.
<b>Device MAC Address</b>	Specify the MAC Address of device.

### 4.1.10.2.1 Advanced Configuration

#### Alias IP Address

This page provides Alias IP Address related configuration. Some device might have more IP addresses than one, you could specify the other IP address here.

Port	Alias IP Address
1	0.0.0.0
2	0.0.0.0
3	0.0.0.0
4	0.0.0.0
5	0.0.0.0
6	0.0.0.0
7	0.0.0.0

Label	Description
<b>Alias IP Address</b>	Specify Alias IP address. Keeps "0.0.0.0", if the device doesn't have alias IP address.

### Alive Check

using the ping command ,check port link status, if port link fail .user can setting action field , select the switch action.

**Alive Check**

Port	Mode	Action	Status
1	---	---	---
2	---	---	---
3	---	---	---
4	---	---	---
5	---	---	---
6	---	---	---
7	---	---	---
8	---	---	---
9	---	---	---
10	---	---	---
11	---	---	---
12	---	---	---

Label	Description
<b>Link Change</b>	Disable and enable port .
<b>Only log it</b>	Only sent log to log server .
<b>Shunt Down the Port</b>	Disable this port .
<b>Reboot Device</b>	Disable and Enable P.O.E Power ,

### DDoS Prevention

This page provides DDOS Prevention related configuration. Switch could monitor the ingress packets, and do some actions when DDOS attack happened on this port. Configure these setting helps the prevention become more suitable.

**DDOS Prevention**

Port	Mode	Sensibility	Packet Type	Socket Number		Filter	Action	Status
				Low	High			
1	Enabled	Normal	TCP	80	80	Destination	---	Running...
2	---	Normal	TCP	80	80	Destination	---	---
3	---	Normal	TCP	80	80	Destination	Blocking 1 minute	---
4	---	Normal	TCP	80	80	Destination	Blocking 10 minute	---
5	---	Normal	TCP	80	80	Destination	Blocking	---
6	---	Normal	TCP	80	80	Destination	Shunt Down the Port	---
7	---	Normal	TCP	80	80	Destination	Only Log it	---
8	---	Normal	TCP	80	80	Destination	Reboot Device	---
9	---	Normal	TCP	80	80	Destination	---	---
10	---	Normal	TCP	80	80	Destination	---	---
11	---	Normal	TCP	80	80	Destination	---	---

Label	Description
<b>Mode</b>	Enable/Disable DDOS Prevention of the port.
<b>Sensibility</b>	Indicates the level of DDOS detection. Possible levels are: Low: Low sensibility. Normal: Normal sensibility. Medium: Medium sensibility. High: High sensibility.
<b>Packet Type</b>	Indicates the packet type of DDOS monitor. Possible types are: RX Total: Total ingress packets. RX Unicast: Unicast ingress packets. RX Multicast: Multicast ingress packets. RX Broadcast: Broadcast ingress packets. TCP: TCP ingress packets. UDP: UDP ingress packets.
<b>Socket Number</b>	If packet type is UDP(or TCP), please specify the socket number here. The socket number could be a range, from low to high. If the socket number is only one, please fill the same number in low field and high field.
<b>Filiter</b>	If packet type is UDP(or TCP), please choose the socket direction (Destination/Source).
<b>Action</b>	Indicates the action when DDOS attack happened. Possible actions are: ---: Do nothing. Blocking 1 minute: To block the forwarding for 1 mintue, and log the event. Blocking 10 minute: To block the forwarding for 10 mintues, and log the event. Blocking: Just blocking, and log the event. Shunt Down the Port: Shut down the port(No Link), and log the event. Only Log it: Just log the event. Reboot Device: If POE supported, the device could be rebooted. And log the event.
<b>Status</b>	Indicates the DDOS Prevention status. Possible statuses are: ---: Disable. Analysing: Analyse the packet throughput for initialization. Running: Function ready. Attacked: DDOS attack happened.

## Device Description

This page provides Device Description related configuration

### Device Description

Port	Device		
	Type	Location Address	Description
1	IP Camera	<input type="text"/>	<input type="text"/>
2	IP Phone	<input type="text"/>	<input type="text"/>
3	Access Point	<input type="text"/>	<input type="text"/>
4	PC	<input type="text"/>	<input type="text"/>
5	PLC	<input type="text"/>	<input type="text"/>
6	Network Video Recorder	<input type="text"/>	<input type="text"/>
7	---	<input type="text"/>	<input type="text"/>
8	---	<input type="text"/>	<input type="text"/>
9	---	<input type="text"/>	<input type="text"/>
10	---	<input type="text"/>	<input type="text"/>
11	---	<input type="text"/>	<input type="text"/>
12	---	<input type="text"/>	<input type="text"/>

Label	Description
<b>Device Type</b>	Indicates the type of device. Possible types are: ---: No specification. IP Camera: IP Camera. IP Phone: IP Phone. Access Point: Access Point. PC: PC. PLC: PLC. Network Video Recorder: Network Video Recorder.
<b>Location Address</b>	Location information of device, this information could be used for Google Mapping.
<b>Description</b>	Device description.

## Stream Check

This page provides Stream Check related configuration.

**Stream Check**

Port	Mode	Action	Status
1	Enabled ▾	Log it ▾	Normal
2	--- ▾	--- ▾	---
3	--- ▾	--- ▾	---
4	--- ▾	--- ▾	---
5	--- ▾	--- ▾	---
6	--- ▾	--- ▾	---
7	--- ▾	--- ▾	---
8	--- ▾	--- ▾	---
9	--- ▾	--- ▾	---
10	--- ▾	--- ▾	---
11	--- ▾	--- ▾	---
12	--- ▾	--- ▾	---

Label	Description
<b>Mode</b>	Enable/Disable stream monitor of the port.
<b>Action</b>	Indicates the action when stream getting low. Possible actions are: ---: Do nothing. Log it: Just log the event

### 5.1.10.3 ACL

#### 5.1.10.3.1 Ports

Configure the ACL parameters (ACE) of each switch port. These parameters will affect frames received on a port unless the frame matches a specific ACE.

**ACL Ports Configuration**

Port	Policy ID	Action	Rate Limiter ID	Port Copy	Logging	Shutdown	Counter
1	1 ▾	Permit ▾	Disabled ▾	Disabled ▾	Disabled ▾	Disabled ▾	108498
2	1 ▾	Permit ▾	Disabled ▾	Disabled ▾	Disabled ▾	Disabled ▾	0
3	1 ▾	Permit ▾	Disabled ▾	Disabled ▾	Disabled ▾	Disabled ▾	68732984
4	1 ▾	Permit ▾	Disabled ▾	Disabled ▾	Disabled ▾	Disabled ▾	0
5	1 ▾	Permit ▾	Disabled ▾	Disabled ▾	Disabled ▾	Disabled ▾	0
6	1 ▾	Permit ▾	Disabled ▾	Disabled ▾	Disabled ▾	Disabled ▾	68732984
7	1 ▾	Permit ▾	Disabled ▾	Disabled ▾	Disabled ▾	Disabled ▾	0
8	1 ▾	Permit ▾	Disabled ▾	Disabled ▾	Disabled ▾	Disabled ▾	0

Label	Description
<b>Port</b>	The logical port for the settings contained in the same row.
<b>Policy ID</b>	Select the policy to apply to this port. The allowed values are 1 through 8. The default value is 1.
<b>Action</b>	Select whether forwarding is permitted ("Permit") or denied ("Deny"). The default value is "Permit".
<b>Rate Limiter ID</b>	Select which rate limiter to apply to this port. The allowed values are Disabled or the values 1 through 15. The default value is "Disabled".
<b>Port Copy</b>	Select which port frames are copied to. The allowed values are Disabled or a specific port number. The default value is "Disabled".
<b>Logging</b>	Specify the logging operation of this port. The allowed values are: Enabled: Frames received on the port are stored in the System Log. Disabled: Frames received on the port are not logged. The default value is "Disabled". Please note that the System Log memory size and logging rate is limited.
<b>Shutdown</b>	Specify the port shut down operation of this port. The allowed values are: Enabled: If a frame is received on the port, the port will be disabled. Disabled: Port shut down is disabled. The default value is "Disabled".
<b>Counter</b>	Counts the number of frames that match this ACE.

### 5.1.10.3.2 Rate Limiters

Configure the rate limiter for the ACL of the switch.

**ACL Rate Limiter Configuration**

Rate Limiter ID	Rate (pps)
1	1
2	1
3	1
4	1
5	1
6	1
7	1
8	1
9	1
10	1
11	1
12	1

Label	Description
<b>Rate Limiter ID</b>	The rate limiter ID for the settings contained in the same row.
<b>Rate</b>	The rate unit is packet per second (pps), configure the rate as 1, 2, 4, 8, 16, 32, 64, 128, 256, 512, 1K, 2K, 4K, 8K, 16K, 32K, 64K, 128K, 256K, 512K, or 1024K. The 1 kpps is actually 1002.1 pps.

### 5.1.10.3.3 ACL Control List

Configure an ACE (Access Control Entry) on this page.

An ACE consists of several parameters. These parameters vary according to the frame type that you select. First select the ingress port for the ACE, and then select the frame type. Different parameter options are displayed depending on the frame type that you selected.

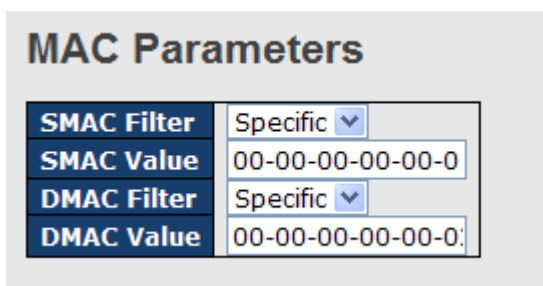

A frame that hits this ACE matches the configuration that is defined here.

### ACE Configuration

<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="background-color: #2c4e64; color: white; padding: 2px;"><b>Ingress Port</b></td> <td style="padding: 2px;">Port 1 ▾</td> </tr> <tr> <td style="background-color: #2c4e64; color: white; padding: 2px;"><b>Frame Type</b></td> <td style="padding: 2px;">IPv4 ▾</td> </tr> </table>	<b>Ingress Port</b>	Port 1 ▾	<b>Frame Type</b>	IPv4 ▾	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="background-color: #2c4e64; color: white; padding: 2px;"><b>Action</b></td> <td style="padding: 2px;">Permit ▾</td> </tr> <tr> <td style="background-color: #2c4e64; color: white; padding: 2px;"><b>Rate Limiter</b></td> <td style="padding: 2px;">Disabled ▾</td> </tr> <tr> <td style="background-color: #2c4e64; color: white; padding: 2px;"><b>Port Copy</b></td> <td style="padding: 2px;">Disabled ▾</td> </tr> <tr> <td style="background-color: #2c4e64; color: white; padding: 2px;"><b>Logging</b></td> <td style="padding: 2px;">Disabled ▾</td> </tr> <tr> <td style="background-color: #2c4e64; color: white; padding: 2px;"><b>Shutdown</b></td> <td style="padding: 2px;">Disabled ▾</td> </tr> <tr> <td style="background-color: #2c4e64; color: white; padding: 2px;"><b>Counter</b></td> <td style="padding: 2px;">5197</td> </tr> </table>	<b>Action</b>	Permit ▾	<b>Rate Limiter</b>	Disabled ▾	<b>Port Copy</b>	Disabled ▾	<b>Logging</b>	Disabled ▾	<b>Shutdown</b>	Disabled ▾	<b>Counter</b>	5197
<b>Ingress Port</b>	Port 1 ▾																
<b>Frame Type</b>	IPv4 ▾																
<b>Action</b>	Permit ▾																
<b>Rate Limiter</b>	Disabled ▾																
<b>Port Copy</b>	Disabled ▾																
<b>Logging</b>	Disabled ▾																
<b>Shutdown</b>	Disabled ▾																
<b>Counter</b>	5197																

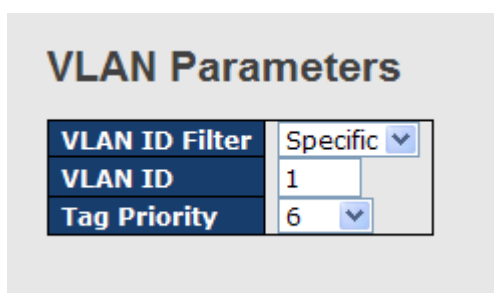

Label	Description
<b>Ingress Port</b>	Select the ingress port for which this ACE applies. Any: The ACE applies to any port. Port n: The ACE applies to this port number, where n is the number of the switch port. Policy n: The ACE applies to this policy number, where n can range from 1 through 8.
<b>Frame Type</b>	Select the frame type for this ACE. These frame types are mutually exclusive. Any: Any frame can match this ACE. Ethernet Type: Only Ethernet Type frames can match this ACE. The IEEE 802.3 describes the value of Length/Type Field specifications

	<p>should be greater than or equal to 1536 decimal (equal to 0600 hexadecimal).</p> <p>ARP: Only ARP frames can match this ACE. Notice the ARP frames won't match the ACE with ethernet type.</p> <p>IPv4: Only IPv4 frames can match this ACE. Notice the IPv4 frames won't match the ACE with ethernet type.</p>
<b>Action</b>	<p>Specify the action to take with a frame that hits this ACE.</p> <p>Permit: The frame that hits this ACE is granted permission for the ACE operation.</p> <p>Deny: The frame that hits this ACE is dropped.</p>
<b>Rate Limiter</b>	<p>Specify the rate limiter in number of base units. The allowed range is 1 to 15. Disabled indicates that the rate limiter operation is disabled.</p>
<b>Port Copy</b>	<p>Frames that hit the ACE are copied to the port number specified here. The allowed range is the same as the switch port number range. Disabled indicates that the port copy operation is disabled.</p>
<b>Logging</b>	<p>Specify the logging operation of the ACE. The allowed values are:</p> <p>Enabled: Frames matching the ACE are stored in the System Log.</p> <p>Disabled: Frames matching the ACE are not logged.</p> <p>Please note that the System Log memory size and logging rate is limited.</p>
<b>Shutdown</b>	<p>Specify the port shut down operation of the ACE. The allowed values are:</p> <p>Enabled: If a frame matches the ACE, the ingress port will be disabled.</p> <p>Disabled: Port shut down is disabled for the ACE.</p>
<b>Counter</b>	<p>The counter indicates the number of times the ACE was hit by a frame.</p>

Label	Description
<b>SMAC Filter</b>	<p>(Only displayed when the frame type is Ethernet Type or ARP.) Specify the source MAC filter for this ACE.</p> <p>Any: No SMAC filter is specified. (SMAC filter status is "don't-care".) Specific: If you want to filter a specific source MAC address with this ACE, choose this value. A field for entering an SMAC value appears.</p>
<b>SMAC Value</b>	<p>When "Specific" is selected for the SMAC filter, you can enter a specific source MAC address. The legal format is "xx-xx-xx-xx-xx-xx". A frame that hits this ACE matches this SMAC value.</p>
<b>DMAC Filter</b>	<p>Specify the destination MAC filter for this ACE.</p> <p>Any: No DMAC filter is specified. (DMAC filter status is "don't-care".) MC: Frame must be multicast. BC: Frame must be broadcast. UC: Frame must be unicast.</p> <p>Specific: If you want to filter a specific destination MAC address with this ACE, choose this value. A field for entering a DMAC value appears.</p>
<b>DMAC Value</b>	<p>When "Specific" is selected for the DMAC filter, you can enter a specific destination MAC address. The legal format is "xx-xx-xx-xx-xx-xx". A frame that hits this ACE matches this DMAC value.</p>

Label	Description
<b>VLAN ID Filter</b>	<p>Specify the VLAN ID filter for this ACE.</p> <p>Any: No VLAN ID filter is specified. (VLAN ID filter status is "don't-care".) Specific: If you want to filter a specific VLAN ID with this ACE, choose this value. A field for entering a VLAN ID number appears.</p>

<b>VLAN ID</b>	When "Specific" is selected for the VLAN ID filter, you can enter a specific VLAN ID number. The allowed range is 1 to 4095. A frame that hits this ACE matches this VLAN ID value.
<b>Tag Priority</b>	Specify the tag priority for this ACE. A frame that hits this ACE matches this tag priority. The allowed number range is 0 to 7. The value Any means that no tag priority is specified (tag priority is "don't-care".)

### IP Parameters

<b>IP Protocol Filter</b>	Other ▾
<b>IP Protocol Value</b>	6
<b>IP TTL</b>	Non-zero ▾
<b>IP Fragment</b>	Yes ▾
<b>IP Option</b>	Yes ▾
<b>SIP Filter</b>	Network ▾
<b>SIP Address</b>	0.0.0.0
<b>SIP Mask</b>	0.0.0.0
<b>DIP Filter</b>	Network ▾
<b>DIP Address</b>	0.0.0.0
<b>DIP Mask</b>	0.0.0.0

Label	Description
<b>IP Protocol Filter</b>	<p>Specify the IP protocol filter for this ACE.</p> <p>Any: No IP protocol filter is specified ("don't-care").</p> <p>Specific: If you want to filter a specific IP protocol filter with this ACE, choose this value. A field for entering an IP protocol filter appears.</p> <p>ICMP: Select ICMP to filter IPv4 ICMP protocol frames. Extra fields for defining ICMP parameters will appear. These fields are explained later in this help file.</p> <p>UDP: Select UDP to filter IPv4 UDP protocol frames. Extra fields for defining UDP parameters will appear. These fields are explained later in this help file.</p> <p>TCP: Select TCP to filter IPv4 TCP protocol frames. Extra fields for defining TCP parameters will appear. These fields are explained later in this help file.</p>
<b>IP Protocol Value</b>	When "Specific" is selected for the IP protocol value, you can enter a specific value.. The allowed range is 0 to 255. A frame that hits this ACE matches this IP protocol value.

<p><b>IP TTL</b></p>	<p>Specify the Time-to-Live settings for this ACE.</p> <p>zero: IPv4 frames with a Time-to-Live field greater than zero must not be able to match this entry.</p> <p>non-zero: IPv4 frames with a Time-to-Live field greater than zero must be able to match this entry.</p> <p>Any: Any value is allowed ("don't-care").</p>
<p><b>IP Fragment</b></p>	<p>Specify the fragment offset settings for this ACE. This involves the settings for the More Fragments (MF) bit and the Fragment Offset (FRAG OFFSET) field for an IPv4 frame.</p> <p>No: IPv4 frames where the MF bit is set or the FRAG OFFSET field is greater than zero must not be able to match this entry.</p> <p>Yes: IPv4 frames where the MF bit is set or the FRAG OFFSET field is greater than zero must be able to match this entry.</p> <p>Any: Any value is allowed ("don't-care").</p>
<p><b>IP Option</b></p>	<p>Specify the options flag setting for this ACE.</p> <p>No: IPv4 frames where the options flag is set must not be able to match this entry.</p> <p>Yes: IPv4 frames where the options flag is set must be able to match this entry.</p> <p>Any: Any value is allowed ("don't-care").</p>
<p><b>SIP Filter</b></p>	<p>Specify the source IP filter for this ACE.</p> <p>Any: No source IP filter is specified. (Source IP filter is "don't-care".)</p> <p>Host: Source IP filter is set to Host. Specify the source IP address in the SIP Address field that appears.</p> <p>Network: Source IP filter is set to Network. Specify the source IP address and source IP mask in the SIP Address and SIP Mask fields that appear.</p>
<p><b>SIP Address</b></p>	<p>When "Host" or "Network" is selected for the source IP filter, you can enter a specific SIP address in dotted decimal notation.</p>
<p><b>SIP Mask</b></p>	<p>When "Network" is selected for the source IP filter, you can enter a specific SIP mask in dotted decimal notation.</p>
<p><b>DIP Filter</b></p>	<p>Specify the destination IP filter for this ACE.</p> <p>Any: No destination IP filter is specified. (Destination IP filter is "don't-care".)</p> <p>Host: Destination IP filter is set to Host. Specify the destination IP address in the DIP Address field that appears.</p> <p>Network: Destination IP filter is set to Network. Specify the</p>

	destination IP address and destination IP mask in the DIP Address and DIP Mask fields that appear.
<b>DIP Address</b>	When "Host" or "Network" is selected for the destination IP filter, you can enter a specific DIP address in dotted decimal notation.
<b>DIP Mask</b>	When "Network" is selected for the destination IP filter, you can enter a specific DIP mask in dotted decimal notation.

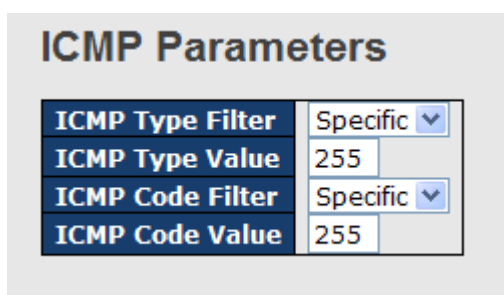

### ARP Parameters

<b>ARP/RARP</b>	Other	<b>ARP SMAC Match</b>	1
<b>Request/Reply</b>	Request	<b>RARP SMAC Match</b>	1
<b>Sender IP Filter</b>	Network	<b>IP/Ethernet Length</b>	Any
<b>Sender IP Address</b>	192.168.1.1	<b>IP</b>	0
<b>Sender IP Mask</b>	255.255.255.0	<b>Ethernet</b>	1
<b>Target IP Filter</b>	Network		
<b>Target IP Address</b>	192.168.1.254		
<b>Target IP Mask</b>	255.255.255.0		

Label	Description
<b>ARP/RARP</b>	Specify the available ARP/RARP opcode (OP) flag for this ACE. Any: No ARP/RARP OP flag is specified. (OP is "don't-care".) ARP: Frame must have ARP/RARP opcode set to ARP. RARP: Frame must have ARP/RARP opcode set to RARP. Other: Frame has unknown ARP/RARP Opcode flag.
<b>Request/Reply</b>	Specify the available ARP/RARP opcode (OP) flag for this ACE. Any: No ARP/RARP OP flag is specified. (OP is "don't-care".) Request: Frame must have ARP Request or RARP Request OP flag set. Reply: Frame must have ARP Reply or RARP Reply OP flag.
<b>Sender IP Filter</b>	Specify the sender IP filter for this ACE. Any: No sender IP filter is specified. (Sender IP filter is "don't-care".) Host: Sender IP filter is set to Host. Specify the sender IP address in the SIP Address field that appears. Network: Sender IP filter is set to Network. Specify the sender IP address and sender IP mask in the SIP Address and SIP Mask fields that appear.
<b>Sender IP Address</b>	When "Host" or "Network" is selected for the sender IP filter, you can

	enter a specific sender IP address in dotted decimal notation.
<b>Sender IP Mask</b>	When "Network" is selected for the sender IP filter, you can enter a specific sender IP mask in dotted decimal notation.
<b>Target IP Filter</b>	Specify the target IP filter for this specific ACE. Any: No target IP filter is specified. (Target IP filter is "don't-care".) Host: Target IP filter is set to Host. Specify the target IP address in the Target IP Address field that appears. Network: Target IP filter is set to Network. Specify the target IP address and target IP mask in the Target IP Address and Target IP Mask fields that appear.
<b>Target IP Address</b>	When "Host" or "Network" is selected for the target IP filter, you can enter a specific target IP address in dotted decimal notation.
<b>Target IP Mask</b>	When "Network" is selected for the target IP filter, you can enter a specific target IP mask in dotted decimal notation.
<b>ARP SMAC Match</b>	Specify whether frames can hit the action according to their sender hardware address field (SHA) settings. 0: ARP frames where SHA is not equal to the SMAC address. 1: ARP frames where SHA is equal to the SMAC address. Any: Any value is allowed ("don't-care").
<b>RARP SMAC Match</b>	Specify whether frames can hit the action according to their target hardware address field (THA) settings. 0: RARP frames where THA is not equal to the SMAC address. 1: RARP frames where THA is equal to the SMAC address. Any: Any value is allowed ("don't-care").
<b>IP/Ethernet Length</b>	Specify whether frames can hit the action according to their ARP/RARP hardware address length (HLN) and protocol address length (PLN) settings. 0: ARP/RARP frames where the HLN is equal to Ethernet (0x06) and the (PLN) is equal to IPv4 (0x04) must not match this entry. 1: ARP/RARP frames where the HLN is equal to Ethernet (0x06) and the (PLN) is equal to IPv4 (0x04) must match this entry. Any: Any value is allowed ("don't-care").
<b>IP</b>	Specify whether frames can hit the action according to their ARP/RARP hardware address space (HRD) settings. 0: ARP/RARP frames where the HLD is equal to Ethernet (1) must not match this entry. 1: ARP/RARP frames where the HLD is equal to Ethernet (1) must match this entry.

	Any: Any value is allowed ("don't-care").
<b>Ethernet</b>	Specify whether frames can hit the action according to their ARP/RARP protocol address space (PRO) settings. 0: ARP/RARP frames where the PRO is equal to IP (0x800) must not match this entry. 1: ARP/RARP frames where the PRO is equal to IP (0x800) must match this entry. Any: Any value is allowed ("don't-care").

Label	Description
<b>ICMP Type Filter</b>	Specify the ICMP filter for this ACE. Any: No ICMP filter is specified (ICMP filter status is "don't-care"). Specific: If you want to filter a specific ICMP filter with this ACE, you can enter a specific ICMP value. A field for entering an ICMP value appears.
<b>ICMP Type Value</b>	When "Specific" is selected for the ICMP filter, you can enter a specific ICMP value. The allowed range is 0 to 255. A frame that hits this ACE matches this ICMP value.
<b>ICMP Code Filter</b>	Specify the ICMP code filter for this ACE. Any: No ICMP code filter is specified (ICMP code filter status is "don't-care"). Specific: If you want to filter a specific ICMP code filter with this ACE, you can enter a specific ICMP code value. A field for entering an ICMP code value appears.
<b>ICMP Code Value</b>	When "Specific" is selected for the ICMP code filter, you can enter a specific ICMP code value. The allowed range is 0 to 255. A frame that hits this ACE matches this ICMP code value.

### TCP Parameters

Source Port Filter	Specific ▾
Source Port No.	0
Dest. Port Filter	Specific ▾
Dest. Port No.	80
TCP FIN	Any ▾
TCP SYN	Any ▾
TCP RST	Any ▾
TCP PSH	Any ▾
TCP ACK	Any ▾
TCP URG	Any ▾

### UDP Parameters

Source Port Filter	Specific ▾
Source Port No.	0
Dest. Port Filter	Range ▾
Dest. Port Range	80 - 65535

Label	Description
<b>TCP/UDP Source Filter</b>	<p>Specify the TCP/UDP source filter for this ACE.</p> <p>Any: No TCP/UDP source filter is specified (TCP/UDP source filter status is "don't-care").</p> <p>Specific: If you want to filter a specific TCP/UDP source filter with this ACE, you can enter a specific TCP/UDP source value. A field for entering a TCP/UDP source value appears.</p> <p>Range: If you want to filter a specific TCP/UDP source range filter with this ACE, you can enter a specific TCP/UDP source range value. A field for entering a TCP/UDP source value appears.</p>
<b>TCP/UDP Source No.</b>	<p>When "Specific" is selected for the TCP/UDP source filter, you can enter a specific TCP/UDP source value. The allowed range is 0 to 65535. A frame that hits this ACE matches this TCP/UDP source value.</p>
<b>TCP/UDP Source Range</b>	<p>When "Range" is selected for the TCP/UDP source filter, you can enter a specific TCP/UDP source range value. The allowed range is 0 to 65535. A frame that hits this ACE matches this TCP/UDP source value.</p>
<b>TCP/UDP Destination Filter</b>	<p>Specify the TCP/UDP destination filter for this ACE.</p> <p>Any: No TCP/UDP destination filter is specified (TCP/UDP destination filter status is "don't-care").</p> <p>Specific: If you want to filter a specific TCP/UDP destination filter with this ACE, you can enter a specific TCP/UDP destination value. A field for entering a TCP/UDP destination value appears.</p> <p>Range: If you want to filter a specific range TCP/UDP destination filter with this ACE, you can enter a specific TCP/UDP destination</p>

	range value. A field for entering a TCP/UDP destination value appears.
<b>TCP/UDP Destination Number</b>	When "Specific" is selected for the TCP/UDP destination filter, you can enter a specific TCP/UDP destination value. The allowed range is 0 to 65535. A frame that hits this ACE matches this TCP/UDP destination value.
<b>TCP/UDP Destination Range</b>	When "Range" is selected for the TCP/UDP destination filter, you can enter a specific TCP/UDP destination range value. The allowed range is 0 to 65535. A frame that hits this ACE matches this TCP/UDP destination value.
<b>TCP FIN</b>	Specify the TCP "No more data from sender" (FIN) value for this ACE. 0: TCP frames where the FIN field is set must not be able to match this entry. 1: TCP frames where the FIN field is set must be able to match this entry. Any: Any value is allowed ("don't-care").
<b>TCP SYN</b>	Specify the TCP "Synchronize sequence numbers" (SYN) value for this ACE. 0: TCP frames where the SYN field is set must not be able to match this entry. 1: TCP frames where the SYN field is set must be able to match this entry. Any: Any value is allowed ("don't-care").
<b>TCP PSH</b>	Specify the TCP "Push Function" (PSH) value for this ACE. 0: TCP frames where the PSH field is set must not be able to match this entry. 1: TCP frames where the PSH field is set must be able to match this entry. Any: Any value is allowed ("don't-care").
<b>TCP ACK</b>	Specify the TCP "Acknowledgment field significant" (ACK) value for this ACE. 0: TCP frames where the ACK field is set must not be able to match this entry. 1: TCP frames where the ACK field is set must be able to match this entry. Any: Any value is allowed ("don't-care").

<b>TCP URG</b>	<p>Specify the TCP "Urgent Pointer field significant" (URG) value for this ACE.</p> <p>0: TCP frames where the URG field is set must not be able to match this entry.</p> <p>1: TCP frames where the URG field is set must be able to match this entry.</p> <p>Any: Any value is allowed ("don't-care").</p>
----------------	--

## 5.1.10.4 AAA

### 5.1.10.4.1 Common Server Configuration

This page allows you to configure the Authentication Servers

#### Authentication Server Configuration

##### Common Server Configuration

<b>Timeout</b>	15	seconds
<b>Dead Time</b>	300	seconds

Label	Description
<b>Timeout</b>	<p>The Timeout, which can be set to a number between 3 and 3600 seconds, is the maximum time to wait for a reply from a server. If the server does not reply within this time frame, we will consider it to be dead and continue with the next enabled server (if any).</p> <p>RADIUS servers are using the UDP protocol, which is unreliable by design. In order to cope with lost frames, the timeout interval is divided into 3 subintervals of equal length. If a reply is not received within the subinterval, the request is transmitted again. This algorithm causes the RADIUS server to be queried up to 3 times before it is considered to be dead.</p>
<b>Dead Time</b>	<p>The Dead Time, which can be set to a number between 0 and 3600 seconds, is the period during which the switch will not send new requests to a server that has failed to respond to a previous request. This will stop the switch from continually trying to contact a server that it has already determined as dead.</p> <p>Setting the Dead Time to a value greater than 0 (zero) will enable this</p>

	feature, but only if more than one server has been configured.
--	--

### 5.1.10.4.2 RADIUS Authentication Server Configuration

The table has one row for each RADIUS Authentication Server and a number of columns, which are:

**RADIUS Authentication Server Configuration**

#	Enabled	IP Address	Port	Secret
1	<input type="checkbox"/>		1812	
2	<input type="checkbox"/>		1812	
3	<input type="checkbox"/>		1812	
4	<input type="checkbox"/>		1812	
5	<input type="checkbox"/>		1812	

Label	Description
<b>#</b>	The RADIUS Authentication Server number for which the configuration below applies.
<b>Enabled</b>	Enable the RADIUS Authentication Server by checking this box.
<b>IP Address</b>	The IP address or hostname of the RADIUS Authentication Server. IP address is expressed in dotted decimal notation.
<b>Port</b>	The UDP port to use on the RADIUS Authentication Server. If the port is set to 0 (zero), the default port (1812) is used on the RADIUS Authentication Server.
<b>Secret</b>	The secret - up to 29 characters long - shared between the RADIUS Authentication Server and the switch stack.

### 5.1.10.4.3 RADIUS Accounting Server Configuration

**RADIUS Accounting Server Configuration**

#	Enabled	IP Address	Port	Secret
1	<input type="checkbox"/>		1813	
2	<input type="checkbox"/>		1813	
3	<input type="checkbox"/>		1813	
4	<input type="checkbox"/>		1813	
5	<input type="checkbox"/>		1813	

Label	Description
<b>#</b>	The RADIUS Accounting Server number for which the configuration below applies.
<b>Enabled</b>	Enable the RADIUS Accounting Server by checking this box.
<b>IP Address</b>	The IP address or hostname of the RADIUS Accounting Server. IP address is expressed in dotted decimal notation.
<b>Port</b>	The UDP port to use on the RADIUS Accounting Server. If the port is set to 0 (zero), the default port (1813) is used on the RADIUS Accounting Server.
<b>Secret</b>	The secret - up to 29 characters long - shared between the RADIUS Accounting Server and the switch stack.

### 5.1.10.5 RADIUS Overview

This page provides an overview of the status of the RADIUS servers configurable on the Authentication configuration page.

### RADIUS Authentication Servers

#### RADIUS Authentication Server Status Overview

Auto-refresh  Refresh

#	IP Address	Status
1	0.0.0.0:1812	Disabled
2	0.0.0.0:1812	Disabled
3	0.0.0.0:1812	Disabled
4	0.0.0.0:1812	Disabled
5	0.0.0.0:1812	Disabled

Label	Description
<b>#</b>	The RADIUS server number. Click to navigate to detailed statistics for this server.
<b>IP Address</b>	The IP address and UDP port number (in <IP Address>:<UDP Port> notation) of this server.
<b>Status</b>	The current status of the server. This field takes one of the following values: Disabled: The server is disabled. Not Ready: The server is enabled, but IP communication is not yet up and running. Ready: The server is enabled, IP communication is up and running,

	<p>and the RADIUS module is ready to accept access attempts.</p> <p>Dead (X seconds left): Access attempts were made to this server, but it did not reply within the configured timeout. The server has temporarily been disabled, but will get re-enabled when the dead-time expires. The number of seconds left before this occurs is displayed in parentheses. This state is only reachable when more than one server is enabled.</p>
--	--

## RADIUS Accounting Servers

### RADIUS Accounting Server Status Overview

#	IP Address	Status
1	0.0.0.0:1813	Disabled
2	0.0.0.0:1813	Disabled
3	0.0.0.0:1813	Disabled
4	0.0.0.0:1813	Disabled
5	0.0.0.0:1813	Disabled

Label	Description
#	The RADIUS server number. Click to navigate to detailed statistics for this server.
IP Address	The IP address and UDP port number (in <IP Address>:<UDP Port> notation) of this server.
Status	<p>The current status of the server. This field takes one of the following values:</p> <p>Disabled: The server is disabled.</p> <p>Not Ready: The server is enabled, but IP communication is not yet up and running.</p> <p>Ready: The server is enabled, IP communication is up and running, and the RADIUS module is ready to accept accounting attempts.</p> <p>Dead (X seconds left): Accounting attempts were made to this server, but it did not reply within the configured timeout. The server has temporarily been disabled, but will get re-enabled when the dead-time expires. The number of seconds left before this occurs is displayed in parentheses. This state is only reachable when more than one server is enabled.</p>

### 5.1.10.6 RADIUS Details

The statistics map closely to those specified in RFC4668 - RADIUS Authentication Client MIB.

Use the server select box to switch between the backend servers to show details for.

The statistics map closely to those specified in RFC4668 - RADIUS Authentication Client MIB.

Use the server select box to switch between the backend servers to show details for.

RADIUS Authentication Statistics for Server #1			
Server #1	Auto-refresh <input type="checkbox"/>	Refresh	Clear

### 5.1.10.7 NAS(802.1x)

This page allows you to configure the IEEE 802.1X and MAC-based authentication system and port settings.

The IEEE 802.1X standard defines a port-based access control procedure that prevents unauthorized access to a network by requiring users to first submit credentials for authentication. One or more central servers, the backend servers, determine whether the user is allowed access to the network. These backend (RADIUS) servers are configured on the Authentication configuration page.

MAC-based authentication allows for authentication of more than one user on the same port, and doesn't require the user to have special 802.1X software installed on his system. The switch uses the user's MAC address to authenticate against the backend server. Intruders can create counterfeit MAC addresses, which makes MAC-based authentication less secure than 802.1X authentication.

#### Overview of 802.1X (Port-Based) Authentication

In the 802.1X-world, the user is called the supplicant, the switch is the authenticator, and the RADIUS server is the authentication server. The switch acts as the man-in-the-middle, forwarding requests and responses between the supplicant and the authentication server. Frames sent between the supplicant and the switch are special 802.1X frames, known as EAPOL (EAP Over LANs) frames. EAPOL frames encapsulate EAP PDUs (RFC3748). Frames sent between the switch and the RADIUS server are RADIUS packets. RADIUS packets also encapsulate EAP PDUs together with other attributes like the switch's IP address, name, and the supplicant's port number on the switch. EAP is very flexible, in that it allows for different authentication methods, like MD5-Challenge, PEAP, and TLS. The important thing is

that the authenticator (the switch) doesn't need to know which authentication method the supplicant and the authentication server are using, or how many information exchange frames are needed for a particular method. The switch simply encapsulates the EAP part of the frame into the relevant type (EAPOL or RADIUS) and forwards it.

When authentication is complete, the RADIUS server sends a special packet containing a success or failure indication. Besides forwarding this decision to the supplicant, the switch uses it to open up or block traffic on the switch port connected to the supplicant.

Note: Suppose two backend servers are enabled and that the server timeout is configured to X seconds (using the Authentication configuration page), and suppose that the first server in the list is currently down (but not considered dead). Now, if the supplicant retransmits EAPOL Start frames at a rate faster than X seconds, then it will never get authenticated, because the switch will cancel on-going backend authentication server requests whenever it receives a new EAPOL Start frame from the supplicant. And since the server hasn't yet failed (because the X seconds haven't expired), the same server will be contacted upon the next backend authentication server request from the switch. This scenario will loop forever. Therefore, the server timeout should be smaller than the supplicant's EAPOL Start frame retransmission rate.

### **Overview of MAC-Based Authentication**

Unlike 802.1X, MAC-based authentication is not a standard, but merely a best-practices method adopted by the industry. In MAC-based authentication, users are called clients, and the switch acts as the supplicant on behalf of clients. The initial frame (any kind of frame) sent by a client is snooped by the switch, which in turn uses the client's MAC address as both username and password in the subsequent EAP exchange with the RADIUS server. The 6-byte MAC address is converted to a string on the following form "xx-xx-xx-xx-xx-xx", that is, a dash (-) is used as separator between the lower-cased hexadecimal digits. The switch only supports the MD5-Challenge authentication method, so the RADIUS server must be configured accordingly.

When authentication is complete, the RADIUS server sends a success or failure indication, which in turn causes the switch to open up or block traffic for that particular client, using static entries into the MAC Table. Only then will frames from the client be forwarded on the switch. There are no EAPOL frames involved in this authentication, and therefore, MAC-based Authentication has nothing to do with the 802.1X standard.

The advantage of MAC-based authentication over 802.1X is that several clients can be connected to the same port (e.g. through a 3rd party switch or a hub) and still require individual authentication, and that the clients don't need special supplicant software to authenticate. The disadvantage is that MAC addresses can be spoofed by malicious users, equipment whose MAC address is a valid RADIUS user can be used by anyone, and only the MD5-Challenge

method is supported.

The 802.1X and MAC-Based Authentication configuration consists of two sections, a system- and a port-wide

### Network Access Server Configuration

#### System Configuration

<b>Mode</b>	Disabled	▼
<b>Reauthentication Enabled</b>	<input type="checkbox"/>	
<b>Reauthentication Period</b>	3600	seconds
<b>EAPOL Timeout</b>	30	seconds
<b>Aging Period</b>	300	seconds
<b>Hold Time</b>	10	seconds

#### Port Configuration

Port	Admin State	Port State	Restart	
*	<>			
1	Force Authorized ▼	Globally Disabled	Reauthenticate	Reinitialize
2	Force Unauthorized ▼	Globally Disabled	Reauthenticate	Reinitialize
3	802.1X ▼	Globally Disabled	Reauthenticate	Reinitialize
4	MAC-based Auth. ▼	Globally Disabled	Reauthenticate	Reinitialize
5	Force Authorized ▼	Globally Disabled	Reauthenticate	Reinitialize

Label	Description
<b>Mode</b>	Indicates if 802.1X and MAC-based authentication is globally enabled or disabled on the switch. If globally disabled, all ports are allowed forwarding of frames.
<b>Reauthentication Enabled</b>	If checked, clients are reauthenticated after the interval specified by the Reauthentication Period. Reauthentication for 802.1X-enabled ports can be used to detect if a new device is plugged into a switch port. For MAC-based ports, reauthentication is only useful if the RADIUS server configuration has changed. It does not involve communication between the switch and the client, and therefore doesn't imply that a client is still present on a port (see Age Period below).
<b>Reauthentication Period</b>	Determines the period, in seconds, after which a connected client must be reauthenticated. This is only active if the Reauthentication Enabled checkbox is checked. Valid values are

	in the range 1 to 3600 seconds.
<b>EAPOL Timeout</b>	<p>Determines the time for retransmission of Request Identity EAPOL frames.</p> <p>Valid values are in the range 1 to 65535 seconds. This has no effect for MAC-based ports.</p>
<b>Age Period</b>	<p>This setting applies to the following modes, i.e. modes using the Port Security functionality to secure MAC addresses:</p> <ul style="list-style-type: none"> <li>• MAC-Based Auth.</li> </ul> <p>When the NAS module uses the Port Security module to secure MAC addresses, the Port Security module needs to check for activity on the MAC address in question at regular intervals and free resources if no activity is seen within a given period of time. This parameter controls exactly this period and can be set to a number between 10 and 1000000 seconds.</p> <p>For ports in MAC-based Auth. mode, reauthentication doesn't cause direct communication between the switch and the client, so this will not detect whether the client is still attached or not, and the only way to free any resources is to age the entry.</p>
<b>Hold Time</b>	<p>This setting applies to the following modes, i.e. modes using the Port Security functionality to secure MAC addresses:</p> <ul style="list-style-type: none"> <li>• MAC-Based Auth.</li> </ul> <p>If a client is denied access - either because the RADIUS server denies the client access or because the RADIUS server request times out (according to the timeout specified on the "Configuration → Security → AAA" page) - the client is put on hold in the Unauthorized state. The hold timer does not count during an on-going authentication.</p> <p>The switch will ignore new frames coming from the client during the hold time.</p> <p>The Hold Time can be set to a number between 10 and 1000000 seconds.</p>
<b>Port</b>	The port number for which the configuration below applies.
<b>Admin State</b>	<p>If NAS is globally enabled, this selection controls the port's authentication mode. The following modes are available:</p> <p><b>Force Authorized</b></p> <p>In this mode, the switch will send one EAPOL Success frame</p>

when the port link comes up, and any client on the port will be allowed network access without authentication.

#### **Force Unauthorized**

In this mode, the switch will send one EAPOL Failure frame when the port link comes up, and any client on the port will be disallowed network access.

#### **Port-based 802.1X**

In the 802.1X-world, the user is called the supplicant, the switch is the authenticator, and the RADIUS server is the authentication server. The authenticator acts as the man-in-the-middle, forwarding requests and responses between the supplicant and the authentication server. Frames sent between the supplicant and the switch is special 802.1X frames, known as EAPOL (EAP Over LANs) frames. EAPOL frames encapsulate EAP PDUs (RFC3748). Frames sent between the switch and the RADIUS server is RADIUS packets. RADIUS packets also encapsulate EAP PDUs together with other attributes like the switch's IP address, name, and the supplicant's port number on the switch. EAP is very flexible, in that it allows for different authentication methods, like MD5-Challenge, PEAP, and TLS. The important thing is that the authenticator (the switch) doesn't need to know which authentication method the supplicant and the authentication server are using, or how many information exchange frames are needed for a particular method. The switch simply encapsulates the EAP part of the frame into the relevant type (EAPOL or RADIUS) and forwards it.

When authentication is complete, the RADIUS server sends a special packet containing a success or failure indication. Besides forwarding this decision to the supplicant, the switch uses it to open up or block traffic on the switch port connected to the supplicant.

Note: Suppose two backend servers are enabled and that the server timeout is configured to X seconds (using the AAA configuration page), and suppose that the first server in the list is currently down (but not considered dead). Now, if the supplicant retransmits EAPOL Start frames at a rate faster than X seconds, then it will never get authenticated, because the switch will cancel

on-going backend authentication server requests whenever it receives a new EAPOL Start frame from the supplicant. And since the server hasn't yet failed (because the X seconds haven't expired), the same server will be contacted upon the next backend authentication server request from the switch. This scenario will loop forever. Therefore, the server timeout should be smaller than the supplicant's EAPOL Start frame retransmission rate.

#### Single 802.1X

In port-based 802.1X authentication, once a supplicant is successfully authenticated on a port, the whole port is opened for network traffic. This allows other clients connected to the port (for instance through a hub) to piggy-back on the successfully authenticated client and get network access even though they really aren't authenticated. To overcome this security breach, use the Single 802.1X variant.

Single 802.1X is really not an IEEE standard, but features many of the same characteristics as does port-based 802.1X. In Single 802.1X, at most one supplicant can get authenticated on the port at a time. Normal EAPOL frames are used in the communication between the supplicant and the switch. If more than one supplicant is connected to a port, the one that comes first when the port's link comes up will be the first one considered. If that supplicant doesn't provide valid credentials within a certain amount of time, another supplicant will get a chance. Once a supplicant is successfully authenticated, only that supplicant will be allowed access. This is the most secure of all the supported modes. In this mode, the Port Security module is used to secure a supplicant's MAC address once successfully authenticated.

#### Multi 802.1X

In port-based 802.1X authentication, once a supplicant is successfully authenticated on a port, the whole port is opened for network traffic. This allows other clients connected to the port (for instance through a hub) to piggy-back on the successfully authenticated client and get network access even though they really aren't authenticated. To overcome this security breach, use the Multi 802.1X variant.

Multi 802.1X is really not an IEEE standard, but features many of the same characteristics as does port-based 802.1X. Multi 802.1X is - like Single 802.1X - not an IEEE standard, but a variant that features many of the same characteristics. In Multi 802.1X, one or more supplicants can get authenticated on the same port at the same time. Each supplicant is authenticated individually and secured in the MAC table using the Port Security module.

In Multi 802.1X it is not possible to use the multicast BPDU MAC address as destination MAC address for EAPOL frames sent from the switch towards the supplicant, since that would cause all supplicants attached to the port to reply to requests sent from the switch. Instead, the switch uses the supplicant's MAC address, which is obtained from the first EAPOL Start or EAPOL Response Identity frame sent by the supplicant. An exception to this is when no supplicants are attached. In this case, the switch sends EAPOL Request Identity frames using the BPDU multicast MAC address as destination - to wake up any supplicants that might be on the port.

The maximum number of supplicants that can be attached to a port can be limited using the Port Security Limit Control functionality.

#### **MAC-based Auth.**

Unlike port-based 802.1X, MAC-based authentication is not a standard, but merely a best-practices method adopted by the industry. In MAC-based authentication, users are called clients, and the switch acts as the supplicant on behalf of clients. The initial frame (any kind of frame) sent by a client is snooped by the switch, which in turn uses the client's MAC address as both username and password in the subsequent EAP exchange with the RADIUS server. The 6-byte MAC address is converted to a string on the following form "xx-xx-xx-xx-xx-xx", that is, a dash (-) is used as separator between the lower-cased hexadecimal digits. The switch only supports the MD5-Challenge authentication method, so the RADIUS server must be configured accordingly.

When authentication is complete, the RADIUS server sends a success or failure indication, which in turn causes the switch to open up or block traffic for that particular client, using the Port

	<p>Security module. Only then will frames from the client be forwarded on the switch. There are no EAPOL frames involved in this authentication, and therefore, MAC-based Authentication has nothing to do with the 802.1X standard.</p> <p>The advantage of MAC-based authentication over port-based 802.1X is that several clients can be connected to the same port (e.g. through a 3rd party switch or a hub) and still require individual authentication, and that the clients don't need special supplicant software to authenticate. The advantage of MAC-based authentication over 802.1X-based authentication is that the clients don't need special supplicant software to authenticate. The disadvantage is that MAC addresses can be spoofed by malicious users - equipment whose MAC address is a valid RADIUS user can be used by anyone. Also, only the MD5-Challenge method is supported. The maximum number of clients that can be attached to a port can be limited using the Port Security Limit Control functionality.</p>
<p><b>Port State</b></p>	<p>The current state of the port. It can undertake one of the following values:</p> <p><b>Globally Disabled:</b> NAS is globally disabled.</p> <p><b>Link Down:</b> NAS is globally enabled, but there is no link on the port.</p> <p><b>Authorized:</b> The port is in Force Authorized or a single-supplicant mode and the supplicant is authorized.</p> <p><b>Unauthorized:</b> The port is in Force Unauthorized or a single-supplicant mode and the supplicant is not successfully authorized by the RADIUS server.</p> <p><b>X Auth/Y Unauth:</b> The port is in a multi-supplicant mode. Currently X clients are authorized and Y are unauthorized.</p>
<p><b>Restart</b></p>	<p>Two buttons are available for each row. The buttons are only enabled when authentication is globally enabled and the port's Admin State is in an EAPOL-based or MAC-based mode.</p> <p>Clicking these buttons will not cause settings changed on the page to take effect.</p> <p><b>Reauthenticate:</b> Schedules a reauthentication whenever the quiet-period of the port runs out (EAPOL-based authentication). For MAC-based authentication, reauthentication will be attempted</p>

	<p>immediately.</p> <p>The button only has effect for successfully authenticated clients on the port and will not cause the clients to get temporarily unauthorized.</p> <p><b>Reinitialize:</b> Forces a reinitialization of the clients on the port and thereby a reauthentication immediately. The clients will transfer to the unauthorized state while the reauthentication is in progress.</p>

### 5.1.11 Warning

#### 5.1.11.1 Fault Alarm

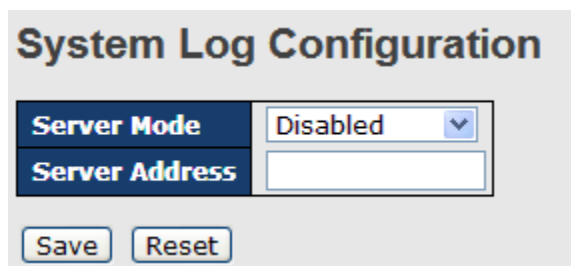

When any selected fault event is happened, the Fault LED in switch panel will light up and the electric relay will signal at the same time.

### 5.1.11.2 System Warning

#### 5.1.11.2.1 SYSLOG Setting

The SYSLOG is a protocol to transmit event notification messages across networks. Please refer to RFC 3164 - The BSD SYSLOG Protocol

System Warning – SYSLOG Setting interface

The following table describes the labels in this screen.

Label	Description
Server Mode	Indicates the server mode operation. When the mode operation is enabled, the syslog message will send out to syslog server. The syslog protocol is based on UDP communication and received on UDP port 514 and the

	<p>syslog server will not send acknowledgments back sender since UDP is a connectionless protocol and it does not provide acknowledgments. The syslog packet will always send out even if the syslog server does not exist. Possible modes are:</p> <p>Enabled: Enable server mode operation.</p> <p>Disabled: Disable server mode operation.</p>
<b>SYSLOG Server IP Address</b>	Indicates the IPv4 host address of syslog server. If the switch provide DNS feature, it also can be a host name.

### 5.1.11.2 SMTP Setting

The SMTP is Short for Simple Mail Transfer Protocol. It is a protocol for e-mail transmission across the Internet. Please refer to RFC 821 - Simple Mail Transfer Protocol.

System Warning – SMTP Setting interface

The following table describes the labels in this screen.

Label	Description
<b>E-mail Alarm</b>	Enable/Disable transmission system warning events by e-mail.
<b>Sender E-mail Address</b>	The SMTP server IP address
<b>Mail Subject</b>	The Subject of the mail
<b>Authentication</b>	<ul style="list-style-type: none"> <li>■ <b>Username:</b> the authentication username.</li> <li>■ <b>Password:</b> the authentication password.</li> </ul>

	<ul style="list-style-type: none"> <li>■ <b>Confirm Password:</b> re-enter password.</li> </ul>
<b>Recipient E-mail Address</b>	The recipient's E-mail address. It supports 6 recipients for a mail.
<b>Apply</b>	Click " <b>Apply</b> " to activate the configurations.
<b>Help</b>	Show help file.

### 5.1.11.2.3 Event Selection

SYSLOG and SMTP are the two warning methods that supported by the system. Check the corresponding box to enable system event warning method you wish to choose. Please note that the checkbox cannot be checked when SYSLOG or SMTP is disabled.

**System Warning - Event Selection**

System Events	SYSLOG	SMTP
System Start	<input type="checkbox"/>	<input type="checkbox"/>
Power Status	<input type="checkbox"/>	<input type="checkbox"/>
SNMP Authentication Failure	<input type="checkbox"/>	<input type="checkbox"/>
Redundant Ring Topology Change	<input type="checkbox"/>	<input type="checkbox"/>

Port	SYSLOG	SMTP
1	Disabled	Link Up and Link Down
2	Disabled	Link Up
3	Disabled	Link Down
4	Disabled	Disabled
5	Disabled	Disabled
6	Disabled	Disabled
7	Disabled	Disabled
8	Disabled	Disabled

System Warning – Event Selection interface

The following table describes the labels in this screen.

Label	Description
<b>System Cold Start</b>	Alert when system restart
<b>Power Status</b>	Alert when a power up or down
<b>SNMP Authentication Failure</b>	Alert when SNMP authentication failure.
<b>O-Ring Topology</b>	Alert when O-Ring topology changes.

<b>Change</b>	
<b>Port Event</b> <b>SYSLOG / SMTP</b> <b>event</b>	<ul style="list-style-type: none"> <li>■ <b>Disable</b></li> <li>■ <b>Link Up</b></li> <li>■ <b>Link Down</b></li> <li>■ <b>Link Up &amp; Link Down</b></li> </ul>
<b>Apply</b>	Click " <b>Apply</b> " to activate the configurations.
<b>Help</b>	Show help file.

## 5.1.12 Monitor and Diag

### 5.1.12.1 MAC Table

#### 5.1.12.1.1 Configuration

The MAC Address Table is configured on this page. Set timeouts for entries in the dynamic MAC Table and configure the static MAC table here.

### MAC Address Table Configuration

**Aging Configuration**

<b>Disable Automatic Aging</b>	<input type="checkbox"/>
<b>Age Time</b>	300 seconds

**MAC Table Learning**

	Port Members											
	1	2	3	4	5	6	7	8	9	10	11	12
<b>Auto</b>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>
<b>Disable</b>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
<b>Secure</b>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

**Static MAC Table Configuration**

			Port Members											
Delete	VLAN ID	MAC Address	1	2	3	4	5	6	7	8	9	10	11	12
<input type="checkbox"/>	1	00-1E-94-98-89-89	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

### Aging Configuration

By default, dynamic entries are removed from the MAC after 300 seconds. This removal is also called aging.

Configure aging time by entering a value here in seconds; for example, **Age**

time  seconds.

The allowed range is 10 to 1000000 seconds.

Disable the automatic aging of dynamic entries by checking  **Disable automatic aging**.

## MAC Table Learning

If the learning mode for a given port is grayed out, another module is in control of the mode, so that it cannot be changed by the user. An example of such a module is the MAC-Based Authentication under 802.1X.

Each port can do learning based upon the following settings:

MAC Table Learning												
	Port Members											
	1	2	3	4	5	6	7	8	9	10	11	12
<b>Auto</b>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input checked="" type="radio"/>
<b>Disable</b>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
<b>Secure</b>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Label	Description
<b>Auto</b>	Learning is done automatically as soon as a frame with unknown SMAC is received.
<b>Disable</b>	No learning is done.
<b>Secure</b>	Only static MAC entries are learned, all other frames are dropped. Note: Make sure that the link used for managing the switch is added to the Static Mac Table before changing to secure learning mode, otherwise the management link is lost and can only be restored by using another non-secure port or by connecting to the switch via the serial interface.

## Static MAC Table Configuration

The static entries in the MAC table are shown in this table. The static MAC table can contain 64 entries.

The maximum of 64 entries is for the whole stack, and not per switch.

The MAC table is sorted first by VLAN ID and then by MAC address.

**Static MAC Table Configuration**

Delete	VLAN ID	MAC Address	Port Members											
			1	2	3	4	5	6	7	8	9	10	11	12
<input type="checkbox"/>	1	00-1E-94-98-89-89	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<input type="button" value="Delete"/>	<input type="text" value="1"/>	<input type="text" value="00-00-00-00-00-00"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<input type="button" value="Delete"/>	<input type="text" value="1"/>	<input type="text" value="00-00-00-00-00-00"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Label	Description
<b>Delete</b>	Check to delete the entry. It will be deleted during the next save.
<b>VLAN ID</b>	The VLAN ID for the entry.
<b>MAC Address</b>	The MAC address for the entry.
<b>Port Members</b>	Checkmarks indicate which ports are members of the entry. Check or uncheck as needed to modify the entry.
<b>Adding a New Static Entry</b>	Click <input type="button" value="Add new static entry"/> to add a new entry to the static MAC table. Specify the VLAN ID, MAC address, and port members for the new entry. Click "Save".

### 5.1.12.1.2 MAC Table

Each page shows up to 999 entries from the MAC table, default being 20, selected through the "entries per page" input field. When first visited, the web page will show the first 20 entries from the beginning of the MAC Table. The first displayed will be the one with the lowest VLAN ID and the lowest MAC address found in the MAC Table.

The "Start from MAC address" and "VLAN" input fields allow the user to select the starting

point in the MAC Table. Clicking the  button will update the displayed table starting from that or the closest next MAC Table match. In addition, the two input fields will -

upon a  button click - assume the value of the first displayed entry, allowing for continuous refresh with the same start address.

The  will use the last entry of the currently displayed VLAN/MAC address pairs as a basis for the next lookup. When the end is reached the text "no more entries" is shown in the

displayed table. Use the  button to start over.

### MAC Address Table

Auto-refresh  Refresh Clear |<< >>

Start from VLAN  and MAC address  with  entries per page.

Type	VLAN	MAC Address	Port Members														
			CPU	1	2	3	4	5	6	7	8	9	10	11	12

11	0	0	0	0	0	0	0	0	0
12	0	0	0	0	0	0	0	0	0

Label	Description
<b>Port</b>	The logical port for the settings contained in the same row.
<b>Packets</b>	The number of received and transmitted packets per port.
<b>Bytes</b>	The number of received and transmitted bytes per port.

<b>Errors</b>	The number of frames received in error and the number of incomplete transmissions per port.
<b>Drops</b>	The number of frames discarded due to ingress or egress congestion.
<b>Filtered</b>	The number of received frames filtered by the forwarding process.
Auto-refresh <input type="checkbox"/>	Check this box to enable an automatic refresh of the page at regular intervals.
<input type="button" value="Refresh"/>	Updates the counters entries, starting from the current entry ID.
<input type="button" value="Clear"/>	Flushes all counters entries.

### 5.1.12.2.2 Detailed Statistics

This page provides detailed traffic statistics for a specific switch port. Use the port select box to select which switch port details to display.

The displayed counters are the totals for receive and transmit, the size counters for receive and transmit, and the error counters for receive and transmit.

#### Detailed Statistics-Receive & Transmit Total

Receive Queue Counters		Transmit Queue Counters	
Rx Q0	0	Tx Q0	0
Rx Q1	0	Tx Q1	0
Rx Q2	0	Tx Q2	0
Rx Q3	0	Tx Q3	0
Rx Q4	0	Tx Q4	0
Rx Q5	0	Tx Q5	0
Rx Q6	0	Tx Q6	0
Rx Q7	0	Tx Q7	0
Receive Error Counters		Transmit Error Counters	
Rx Drops	0	Tx Drops	0
Rx CRC/Alignment	0	Tx Late/Exc. Coll.	0
Rx Undersize	0		
Rx Oversize	0		
Rx Fragments	0		
Rx Jabber	0		
Rx Filtered	0		

Label	Description
<b>Rx and Tx Packets</b>	The number of received and transmitted (good and bad) packets.
<b>Rx and Tx Octets</b>	The number of received and transmitted (good and bad) bytes. Includes FCS, but excludes framing bits.
<b>Rx and Tx Unicast</b>	The number of received and transmitted (good and bad) unicast packets.
<b>Rx and Tx Multicast</b>	The number of received and transmitted (good and bad) multicast packets.
<b>Rx and Tx Broadcast</b>	The number of received and transmitted (good and bad) broadcast packets.
<b>Rx and Tx Pause</b>	A count of the MAC Control frames received or transmitted on this port that have an opcode indicating a PAUSE operation.
<b>Rx Drops</b>	The number of frames dropped due to lack of receive buffers or egress congestion.
<b>Rx CRC/Alignment</b>	The number of frames received with CRC or alignment errors.
<b>Rx Undersize</b>	The number of short 1 frames received with valid CRC.
<b>Rx Oversize</b>	The number of long 2 frames received with valid CRC.
<b>Rx Fragments</b>	The number of short 1 frames received with invalid CRC.
<b>Rx Jabber</b>	The number of long 2 frames received with invalid CRC.
<b>Rx Filtered</b>	The number of received frames filtered by the forwarding process.
<b>Tx Drops</b>	The number of frames dropped due to output buffer congestion.
<b>Tx Late / Exc.Coll.</b>	The number of frames dropped due to excessive or late collisions.

Short frames are frames that are smaller than 64 bytes.

Long frames are frames that are longer than the configured maximum frame length for this port.

### 5.1.12.3 Port Mirroring

Configure port Mirroring on this page.

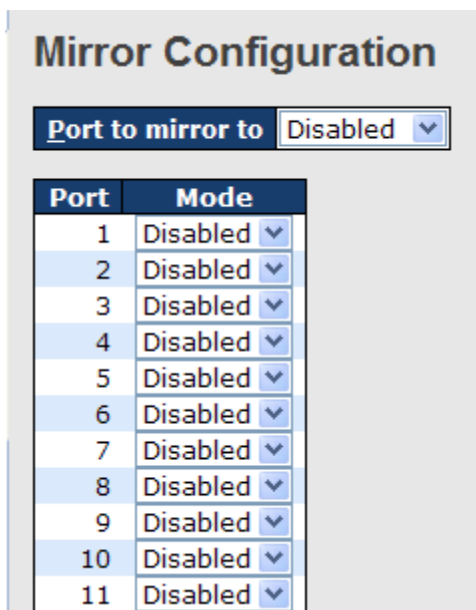

To debug network problems, selected traffic can be copied, or mirrored, to a mirror port where a frame analyzer can be attached to analyze the frame flow.

The traffic to be copied to the mirror port is selected as follows:

All frames received on a given port (also known as ingress or source mirroring).

All frames transmitted on a given port (also known as egress or destination mirroring).

Port to mirror also known as the mirror port. Frames from ports that have either source (rx) or destination (tx) mirroring enabled are mirrored to this port. Disabled disables mirroring.

Label	Description
<b>Port</b>	The logical port for the settings contained in the same row.
<b>Mode</b>	<p>Select mirror mode.</p> <p>Rx only : Frames received at this port are mirrored to the mirror port. Frames transmitted are not mirrored.</p> <p>Tx only :Frames transmitted from this port are mirrored to the mirror port. Frames received are not mirrored.</p> <p>Disabled : Neither frames transmitted nor frames received are mirrored.</p> <p>Enabled : Frames received and frames transmitted are mirrored to the mirror port.</p> <p>Note: For a given port, a frame is only transmitted once. It is therefore not possible to mirror Tx frames for the mirror port. Because of this, mode for the selected mirror port is limited to Disabled or Rx only.</p>

### 5.1.12.4 System Log Information

The switch system log information is provided here.

#### System Log Information

Auto-refresh  Refresh Clear |<< << >> >>| Open in new window

**Level** All

The total number of entries is 1 for the given level.

Start from ID 1 with 20 entries per page.

ID	Level	Time	Message
	Info	1970-01-01 00:01:09 +0000	Port. 1 Device( 192.168.10.66): Alive Check got reply again.

Label	Description
<b>ID</b>	The ID (>= 1) of the system log entry.
<b>Level</b>	The level of the system log entry. The following level types are supported: Info: Information level of the system log. Warning: Warning level of the system log. Error: Error level of the system log. All: All levels.
<b>Time</b>	The time of the system log entry.
<b>Message</b>	The MAC Address of this switch.
Auto-refresh <input type="checkbox"/>	Check this box to enable an automatic refresh of the page at regular intervals.
<span style="border: 1px solid #ccc; padding: 2px;">Refresh</span>	Updates the system log entries, starting from the current entry ID.
<span style="border: 1px solid #ccc; padding: 2px;">Clear</span>	Flushes all system log entries.
<span style="border: 1px solid #ccc; padding: 2px;"> &lt;&lt;</span>	Updates the system log entries, starting from the first available entry ID.
<span style="border: 1px solid #ccc; padding: 2px;">&lt;&lt;</span>	Updates the system log entries, ending at the last entry currently displayed.
<span style="border: 1px solid #ccc; padding: 2px;">&gt;&gt;</span>	Updates the system log entries, starting from the last entry currently displayed.
<span style="border: 1px solid #ccc; padding: 2px;">&gt;&gt; </span>	Updates the system log entries, ending at the last available entry ID.

### 5.1.12.5 Cable Diagnostics

This page is used for running the VeriPHY Cable Diagnostics.

#### VeriPHY Cable Diagnostics

Port All ▼

Start

Cable Status								
Port	Pair A	Length A	Pair B	Length B	Pair C	Length C	Pair D	Length D
1	--	--	--	--	--	--	--	--
2	--	--	--	--	--	--	--	--
3	--	--	--	--	--	--	--	--
4	--	--	--	--	--	--	--	--
5	--	--	--	--	--	--	--	--
6	--	--	--	--	--	--	--	--
7	--	--	--	--	--	--	--	--
8	--	--	--	--	--	--	--	--

Press Start to run the diagnostics. This will take approximately 5 seconds. If all ports are selected, this can take approximately 15 seconds. When completed, the page refreshes automatically, and you can view the cable diagnostics results in the cable status table. Note that VeriPHY is only accurate for cables of length 7 - 140 meters. 10 and 100 Mbps ports will be linked down while running VeriPHY. Therefore, running VeriPHY on a 10 or 100 Mbps management port will cause the switch to stop responding until VeriPHY is complete.

Label	Description
<b>Port</b>	The port where you are requesting VeriPHY Cable Diagnostics.
<b>Cable Status</b>	Port: Port number. Pair: The status of the cable pair. Length: The length (in meters) of the cable pair.

### 5.1.12.6 SFP Monitor

DDM function, can pass SFP module which supports DDM function, measure the temperature of the apparatus .And manage and set up event alarm module through DDM WEB

### SFP Monitor

### 5.1.12.7 Ping

This page allows you to issue ICMP PING packets to troubleshoot IP connectivity issues.

### ICMP Ping

IP Address	0.0.0.0
Ping Size	64

After you press  , 5 ICMP packets are transmitted, and the sequence number and roundtrip time are displayed upon reception of a reply. The page refreshes automatically until responses to all packets are received, or until a timeout occurs.

```
PING6 server ::10.10.132.20
64 bytes from ::10.10.132.20: icmp_seq=0, time=0ms
```

64 bytes from ::10.10.132.20: icmp\_seq=1, time=0ms

64 bytes from ::10.10.132.20: icmp\_seq=2, time=0ms

64 bytes from ::10.10.132.20: icmp\_seq=3, time=0ms

64 bytes from ::10.10.132.20: icmp\_seq=4, time=0ms

Sent 5 packets, received 5 OK, 0 bad

You can configure the following properties of the issued ICMP packets:

Label	Description
<b>IP Address</b>	The destination IP Address.
<b>Ping Size</b>	The payload size of the ICMP packet. Values range from 8 bytes to 1400 bytes.

### 5.1.12.8 IPv6 Ping

PING6 server ::192.168.10.1

sendto

sendto

sendto

Sent 5 packets, received 0 OK, 0 bad

## 5.1.13 PoE

### 5.1.13.1 Configuration

PoE is an acronym for Power Over Ethernet.

Power Over Ethernet is used to transmit electrical power, to remote devices over standard Ethernet cable. It could for example be used for powering IP telephones, wireless LAN access points and other equipment, where it would be difficult or expensive to connect the equipment to main power supply.

**Power Over Ethernet Configuration**

Reserved Power determined by  Class  Allocation  LLDP-MED

Power Management Mode  Actual Consumption  Reserved Power

PoE Power Supply Configuration

Primary Power Supply [W]

PoE Port Configuration

Port	PoE Mode	Priority	Maximum Power [W]
*	<>	<>	15.4
1	PoE+	Low	15.4
2	PoE+	Low	15.4
3	PoE+	Low	15.4
4	PoE+	Low	15.4
5	PoE+	Low	15.4
6	PoE+	Low	15.4
7	PoE+	Low	15.4
8	PoE+	Low	15.4

Label	Description
<b>Reserved Power determined by</b>	<p>There are three modes for configuring how the ports/PDs may reserve power.</p> <ol style="list-style-type: none"> <li>1. Allocated mode: In this mode the user allocates the amount of power that each port may reserve. The allocated/reserved power for each port/PD is specified in the Maximum Power fields.</li> <li>2. Class mode: In this mode each port automatically determines how much power to reserve according to the class the connected PD belongs to, and reserves the power accordingly. Four different port classes exist and one for 4, 7, 15.4 or 30 Watts. In this mode the Maximum Power fields have no effect.</li> <li>3. LLDP-MED mode: This mode is similar to the Class mode expect that each port determine the amount power it reserves by</li> </ol>

	<p>exchanging PoE information using the LLDP protocol and reserves power accordingly. If no LLDP information is available for a port, the port will reserve power using the class mode</p> <p>In this mode the Maximum Power fields have no effect</p> <p>For all modes: If a port uses more power than the reserved power for the port, the port is shut down.</p>
<b>Power Management Mode</b>	<p>There are 2 modes for configuring when to shut down the ports:</p> <ol style="list-style-type: none"> <li>1. Actual Consumption: In this mode the ports are shut down when the actual power consumption for all ports exceeds the amount of power that the power supply can deliver or if the actual power consumption for a given port exceeds the reserved power for that port. The ports are shut down according to the ports priority. If two ports have the same priority the port with the highest port number is shut down.</li> <li>2. Reserved Power: In this mode the ports are shut down when total reserved powered exceeds the amount of power that the power supply can deliver. In this mode the port power is not turned on if the PD requests more power than available from the power supply.</li> </ol>
<b>Primary and Backup Power Source</b>	<p>Some switches support having two PoE power supplies. One is used as primary power source, and one as backup power source. If the switch doesn't support backup power supply only the primary power supply settings will be shown. In case that the primary power source fails the backup power source will take over. For being able to determine the amount of power the PD may use, it must be defined what amount of power the primary and backup power sources can deliver.</p> <p>Valid values are in the range 0 to 2000 Watts.</p>
<b>Port</b>	<p>This is the logical port number for this row.</p> <p>Ports that are not PoE-capable are grayed out and thus impossible to configure PoE for.</p>
<b>PoE Mode</b>	<p>The PoE Mode represents the PoE operating mode for the port.</p> <p>Disabled: PoE disabled for the port.</p> <p>PoE : Enables PoE IEEE 802.3af (Class 4 PDs limited to 15.4W)</p>

	PoE+ : Enables PoE+ IEEE 802.3at (Class 4 PDs limited to 30W)
<b>Priority</b>	<p>The Priority represents the ports priority. There are three levels of power priority named Low, High and Critical.</p> <p>The priority is used in the case where the remote devices requires more power than the power supply can deliver. In this case the port with the lowest priority will be turn off starting from the port with the highest port number.</p>
<b>Maximum Power</b>	The Maximum Power value contains a numerical value that indicates the maximum power in watts that can be delivered to a remote device.(The maximum allowed value is 30 W.)

### 5.1.13.2 Status

This page allows the user to inspect the current status for all PoE ports.

<b>Mode</b>	Indicates the PoE Schedule mode operation. Possible modes are: Enabled: Enable PoE Schedule configure. Disabled: Disable PoE Schedule configure.
<b>Daily Schedule Form</b>	Check Hours and Week checkbox to set port working times.

### 5.1.13.4 PoE Auto-Ping

This page can monitor the real-time status of connected power devices.

Switch could send alive-checking packets to assure the connected devices are in working state.

If the connected devices fail to response, switch could reactivate the connected devices to assure the reliability of the network.

### Auto-Ping Check

Ping Check: Disable ▾

Port	Ping IP Address	Interval Time (10~120) seconds	Retry Time (1~5)	Failure Log	Failure Action	Reboot Time (3~120) seconds

Auto-refresh

Label	Description
<b>Ping Check</b>	Indicates the Ping Check mode operation. Possible modes are: Enabled: Enable Auto-Ping configure. Disabled: Disable Auto-Ping configure
<b>Port</b>	Port of the switch port number.
<b>Ping IP Address</b>	Send alive-checking packets to ip address.
<b>Interval Time</b>	Set (10~120)seconds to control switch sending alive-checking packets each Interval Time.
<b>Retry Time</b>	If the connected devices fail to response, retry until numbers of set frequency .
<b>Failure Log</b>	Monitor connection status. If the connected devices succeed to response,total plus one; if the connected devices fail to response,error plus one.
<b>Failure Action</b>	If the connected devices fail to response,the users can choose five Features; Nothing: Nothing to do. Restart Forever: Try to supply power and cut power until connected devices success. Restart Once:Try to cut power and supply power once. Power On:Supply power to device. Power Off:Stop supplying power to device.
<b>Reboot Time</b>	Configure the switch delay (3-120)seconds sending alive-checking packet when the users choose Restart Forever / Restart Once Fratures.

### 5.1.14 Factory Defaults

You can reset the configuration of the stack switch on this page. Only the IP configuration is retained.

#### Factory Defaults

Label	Description
<input type="button" value="Yes"/>	Click to reset the configuration to Factory Defaults.
<input type="button" value="No"/>	Click to return to the Port State page without resetting the configuration

### 5.1.15 System Reboot

You can reset the stack switch on this page. After reset, the system will boot normally as if you had powered-on the devices

#### Warm Reset

Label	Description
<input type="button" value="Yes"/>	Click to reboot device.
<input type="button" value="No"/>	Click to return to the Port State page without rebooting.

# Command Line Interface Management

## 6.1 About CLI Management

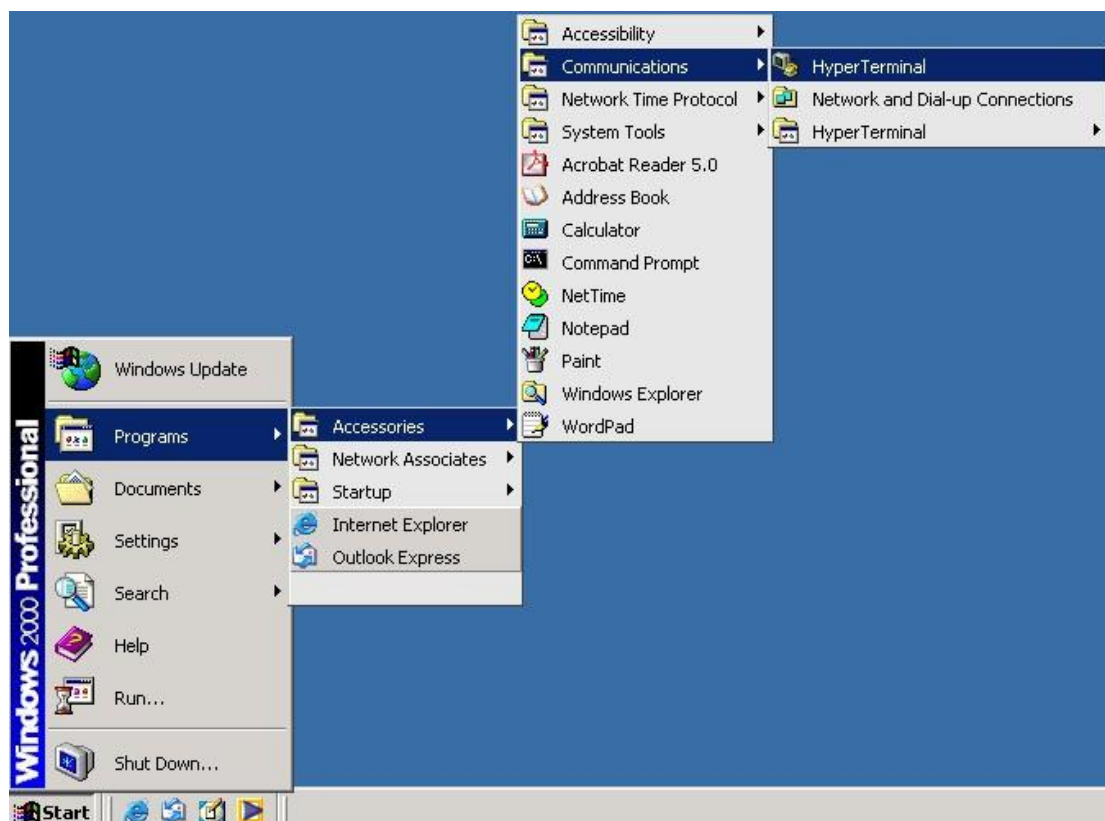

Besides WEB-base management, IGPS-9084GP-LA also support CLI management. You can use console or telnet to management switch by CLI.

### CLI Management by RS-232 Serial Console (115200, 8, none, 1, none)

Before Configuring by RS-232 serial console, use an RJ45 to DB9-F cable to connect the Switches' RS-232 Console port to your PC's COM port.

Follow the steps below to access the console via RS-232 serial cable.

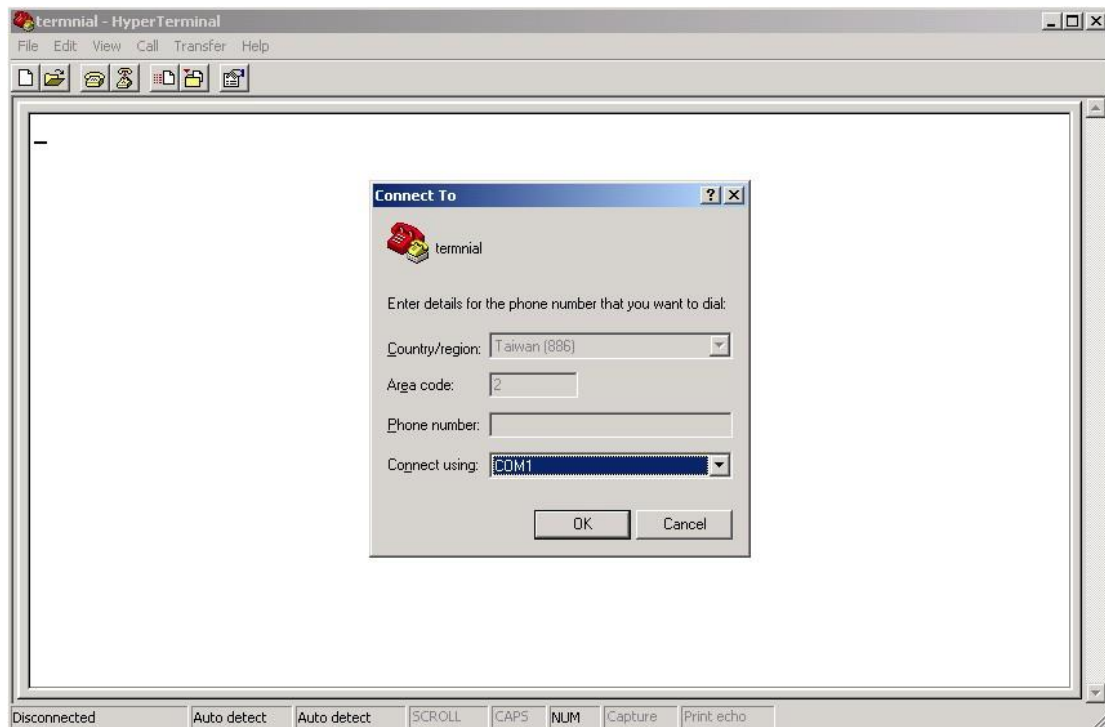

Step 1. From the Windows desktop, click on Start -> Programs -> Accessories -> Communications -> Hyper Terminal

Step 2. Input a name for new connection

Step 3. Select to use COM port number

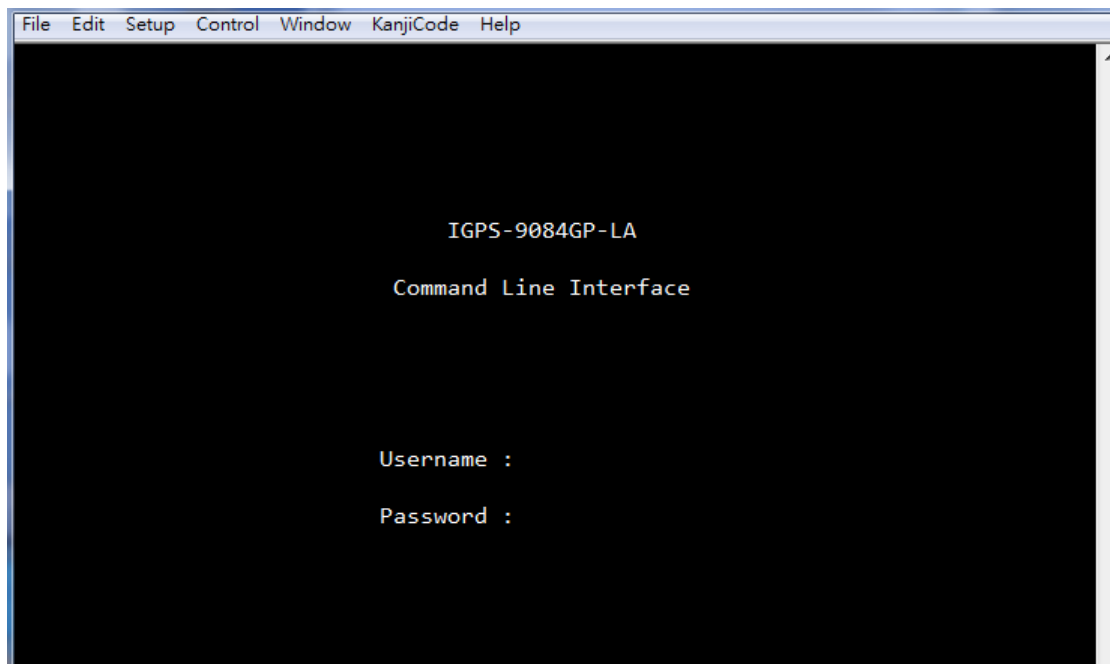

Step 4. The COM port properties setting, 115200 for Bits per second, 8 for Data bits, None for Parity, 1 for Stop bits and none for Flow control.

Step 5. The Console login screen will appear. Use the keyboard to enter the Username and Password (The same with the password for Web Browser), then press “Enter”.

### CLI Management by Telnet

Users can use “TELNET” to configure the switches.

The default value is as below:

IP Address: **192.168.10.1**

Subnet Mask: **255.255.255.0**

Default Gateway: **192.168.10.254**

User Name: **admin**

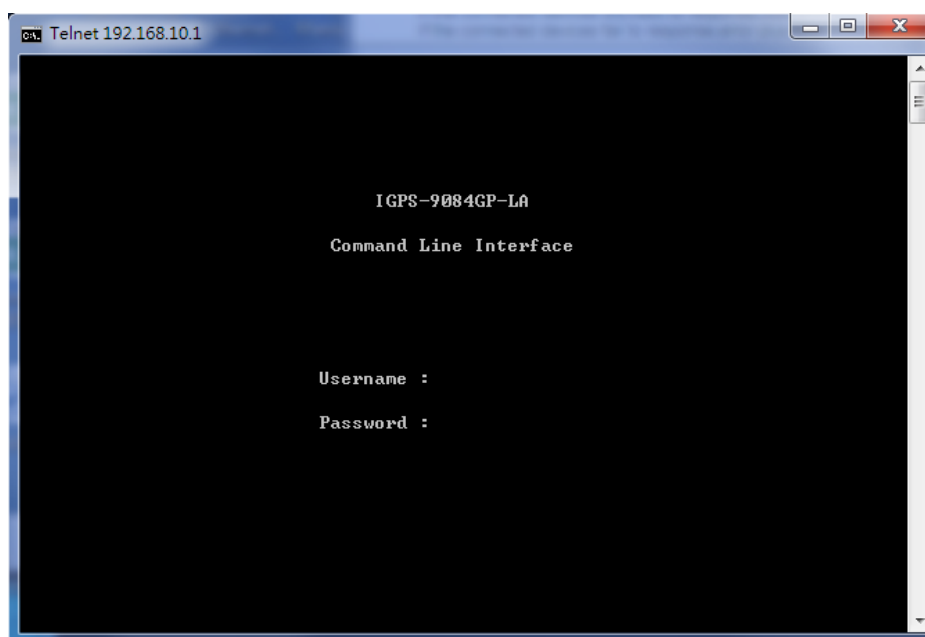

Password: **admin**

Follow the steps below to access the console via Telnet.

Step 1. Telnet to the IP address of the switch from the Windows “Run” command (or from the MS-DOS prompt) as below.

Step 2. The Login screen will appear. Use the keyboard to enter the Username and Password (The same with the password for Web Browser ), and then press “Enter”

# Technical Specifications

ORing Switch Model	IGPS-9084GP-LA
<b>Physical Ports</b>	
10/100/1000Base-T(X) with P.S.E. Ports in RJ45 Auto MDI/MDIX	8
100/1000Base-X with SFP port	4
<b>Technology</b>	
Ethernet Standards	IEEE 802.3 for 10Base-T IEEE 802.3u for 100Base-TX and 100Base-FX IEEE 802.3ab for 1000Base-T IEEE 802.3z for 1000Base-X IEEE 802.3x for Flow control IEEE 802.3ad for LACP (Link Aggregation Control Protocol ) IEEE 802.1p for COS (Class of Service) IEEE 802.1Q for VLAN Tagging IEEE 802.1D for STP (Spanning Tree Protocol) IEEE 802.1w for RSTP (Rapid Spanning Tree Protocol) IEEE 802.1s for MSTP (Multiple Spanning Tree Protocol) IEEE 802.1x for Authentication IEEE 802.1AB for LLDP (Link Layer Discovery Protocol) IEEE 802.3at PoE specification (up to 30 Watts per port for P.S.E.)
PoE Power Supply Type	Endspan mode
PoE Power Output	Per port 56V DC, 350mA. Max. 15.4 watts (IEEE 802.3af), Per Port 56V DC, 590mA. Max. 30 watts (IEEE 802.3at)
MAC Table	8k
Priority Queues	8
Processing	Store-and-Forward
Share Data Buffer	4Mbit
Switch Properties	Switching latency: 7 us Switching bandwidth: 24Gbps Throughput (packet per second) : 17.856Mpps@64Bytes packet Max. Number of Available VLANs: 4096 VLAN ID Range : VID 0 to 4095 IGMP multicast groups: 256 for each VLAN Port rate limiting: User Define
Jumbo frame	Up to 9.6K Bytes
Security Features	Device Binding security feature Enable/disable ports, MAC based port security Port based network access control (802.1x) VLAN (802.1Q ) to segregate and secure network traffic Radius centralized password management SNMPv3 encrypted authentication and access security Https / SSH enhance network security
Software Features	STP/RSTP/MSTP (IEEE 802.1D/w/s) Redundant Ring (O-Ring) with recovery time less than 20ms over 250 units TOS/Diffserv supported Quality of Service (802.1p) for real-time traffic VLAN (802.1Q) with VLAN tagging IGMP Snooping IP-based bandwidth management Application-based QoS management DOS/DDOS auto prevention Port configuration, status, statistics, monitoring, security DHCP Server/Client/Relay SMTP Client Modbus TCP EtherNet/IP™ NTP server
Network Redundancy	O-Ring Open-Ring

	O-Chain MRP MSTP (RSTP/STP compatible)
RS-232 Serial Console Port	RS-232 in RJ45 connector with console cable. 115200bps, 8, N, 1
<b>LED indicators</b>	
Power Indicator (PWR)	Green : Power LED x 3
Ring Master Indicator (R.M.)	Green : Indicates that the system is operating in O-Ring Master mode
O-Ring Indicator (Ring)	Green : Indicates that the system operating in O-Ring mode Green Blinking : Indicates that the Ring is broken.
Fault Indicator (Fault)	Amber : Indicate unexpected event occurred
10/100/1000Base-T(X) RJ45 Port Indicator	Green for Port LINK/ACT indicator Dual color LED for speed indicator: Green for 1000Mbps / Amber for 100Mbps / off-light for 10Mbps
100/1000Base-X SFP Port Indicator	Green for port Link/Act.
PoE Indicator	Green : PoE enabled LED x 8
<b>Fault contact</b>	
Relay	Relay output to carry capacity of 1A at 24VDC
<b>Reset Function</b>	
Reset Button	< 5 sec: System reboot, > 5 sec: Factory default
<b>Power</b>	
Redundant Input power	50/57/-50VDC on 6-pin terminal block
Power consumption (Typ.)	13.2 Watts
PoE Power Budget	240W max, 30W/per port
Overload current protection	Present
Reverse Polarity Protection	Present
Hi-POT	1.5KV AC
<b>Physical Characteristic</b>	
Enclosure	IP-30
Dimension (W x D x H)	54.3 (W) x 108.3 (D) x 145.1 (H) mm (2.13 x 4.26 x 5.71 inches)
Weight (g)	TBC g
<b>Environmental</b>	
Storage Temperature	-40 to 85°C (-40 to 185°F)
Operating Temperature	-40 to 75°C (-40 to 167°F)
Operating Humidity	5% to 95% Non-condensing
<b>Regulatory approvals</b>	
EMC	CE EMC (EN 55024, EN 55032), FCC Part 15 B
